COM Express™ conga-TC97

5th Generation Intel® Core™ i7, i5, i3 Single Chip Ultra Low TDP Processors

User's Guide

Revision 1.7

Revision History

Revision	Date (yyyy-mm-dd)	Author	Changes
0.1	2015-01-30	AEM	• Preliminary release
0.2	2015-06-02	AEM	• Added power consumption values in section 2.5 “Power Consumption” • Updated the block diagram in section 3 “Block Diagram” • Corrected the statement that the PWRBTN# signal is active on rising edge in table 17 “Power and System Management Signal Descriptions” • Updated the IO address ranges sent to the LPC Bus in section 9.1.1 “LPC Bus” • Added BIOS setup description in section 10
1.0	2016-07-18	AEM	• Corrected the maximum memory capacity supported • Added Windows 10 to section 2.2 “Supported Operating Systems” • Updated and rearranged section 4 “Heatspreader” and added passive cooling solution • Updated section 6 “Additional Features” • Corrected section 10.5.1.2 “PCI Express Graphics (PEG) Port Submenu” • Updated section 10 “BIOS Setup Description” • Official release
1.1	2016-10-11	AEM	• Corrected the description of pins D63 and D64 in table 31 “Connector C-D Pinout” • Updated section 10 “BIOS Setup Description”
1.2	2018-08-24	AEM	• Restructured and updated sections 2.5 “Power Consumption” and 2.6 “Supply Voltage Battery Power” • Updated the cooling diagrams in section 4 “Cooling Solutions” • Corrected FAN_PWMOUT signal name in table 17 “Miscellaneous Signal Description” • Updated SMB_ALERT# pull-up column in table 19 “Power and System Management Signal Descriptions”
1.3	2020-07-10	AEM	• Corrected the resolutions for three independent displays in table 6 “Display Combination (U-processor line)” • Updated “Electrostatic Sensitive Device” information on page 4 • Updated and rearranged section 4 “Cooling Solutions” • Restructured the whole document • Added note about the minimum pulse width required for proper button detection in table 22 “Power and System Management Signal Descriptions” • Updated the link for power supply implementation guidelines in section 5.1.12 “Power Control” • Added information about congatec MLF file to section 11 “Additional BIOS Features”. Updated section 11.2 “Updating the BIOS” and added caution note. • Updated section 11.1 “Supported Flash Devices” • Deleted section 12 “Industry Specifications”
1.4	2020-12-08	AEM	• Corrected the number of PCIe lanes supported in section 5.1.1 “PCI Express” • Corrected section 11.3 “Supported Flash Devices”
1.5	2021-04-19	AEM	• Updated table 1 “conga-TC97 Variants”, table 2 “Feature Summary”, table 7 “Display Combination (U-processor line) and table 15 “HDMI Signal Descriptions” • Updated section 3 “Block Diagram”, section 5.1.3 “Digital Display Interface” • Deleted section 5.1.3.1 “HDMI” and section 5.1.3.2 “DVI”
1.6	2021-08-02	AEM	• Added Software License Information • Changed congatec AG to congatec GmbH • Updated the Power Supply Implementation Guidelines in section 5.1.12 “Power Control” • Updated section 6.3 “congatec Battery Management Interface”

Copyright © 2015 congatec GmbH

1.7	2021-11-16	AEM	• Deleted HDMI references from section 1.2 “Options Information”, section 2.1 “Feature List”, section 3 “Block Diagram and section 5.1.3 “Display Interfaces”

Copyright © 2015 congatec GmbH

Preface

This user's guide provides information about the components, features, connectors and BIOS Setup menus available on the conga-TC97. It is one of three documents that should be referred to when designing a COM Express™ application. The other reference documents that should be used include the following:

COM Express™ Design Guide
COM Express™ Specification

The links to these documents can be found on the congatec GmbH website at www.congatec.com

Software Licenses

Notice Regarding Open Source Software

The congatec products contain Open Source software that has been released by programmers under specific licensing requirements such as the "General Public License" (GPL) Version 2 or 3, the "Lesser General Public License" (LGPL), the "ApacheLicense" or similar licenses.

You can find the specific details at https://www.congatec.com/en/licenses/. Search for the revision of the BIOS/UEFI or Board Controller Software (as shown in the POST screen or BIOS setup) to get the complete product related license information. To the extent that any accompanying material such as instruction manuals, handbooks etc. contain copyright notices, conditions of use or licensing requirements that contradict any applicable Open Source license, these conditions are inapplicable.

The use and distribution of any Open Source software contained in the product is exclusively governed by the respective Open Source license. The Open Source software is provided by its programmers without ANY WARRANTY, whether implied or expressed, of any fitness for a particular purpose, and the programmers DECLINE ALL LIABILITY for damages, direct or indirect, that result from the use of this software.

OEM/ CGUTL BIOS

BIOS/UEFI modified by customer via the congatec System Utility (CGUTL) is subject to the same license as the BIOS/UEFI it is based on. You can find the specific details at https://www.congatec.com/en/licenses/.

Copyright © 2015 congatec GmbH

Disclaimer

The information contained within this user's guide, including but not limited to any product specification, is subject to change without notice.

congatec GmbH provides no warranty with regard to this user's guide or any other information contained herein and hereby expressly disclaims any implied warranties of merchantability or fitness for any particular purpose with regard to any of the foregoing. congatec GmbH assumes no liability for any damages incurred directly or indirectly from any technical or typographical errors or omissions contained herein or for discrepancies between the product and the user's guide. In no event shall congatec GmbH be liable for any incidental, consequential, special, or exemplary damages, whether based on tort, contract or otherwise, arising out of or in connection with this user's guide or any other information contained herein or the use thereof.

Intended Audience

This user's guide is intended for technically qualified personnel. It is not intended for general audiences.

Lead-Free Designs (RoHS)

All congatec GmbH designs are created from lead-free components and are completely RoHS compliant.

Electrostatic Sensitive Device

All congatec GmbH products are electrostatic sensitive devices. They are enclosed in static shielding bags, and shipped enclosed in secondary packaging (protective packaging). The secondary packaging does not provide electrostatic protection.

Do not remove the device from the static shielding bag or handle it, except at an electrostatic-free workstation. Also, do not ship or store electronic devices near strong electrostatic, electromagnetic, magnetic, or radioactive fields unless the device is contained within its original packaging. Be aware that failure to comply with these guidelines will void the congatec GmbH Limited Warranty.

Copyright © 2015 congatec GmbH

Symbols

The following symbols are used in this user's guide:

Warning

Warnings indicate conditions that, if not observed, can cause personal injury.

Caution

Cautions warn the user about how to prevent damage to hardware or loss of data.

Note

Notes call attention to important information that should be observed.

Copyright Notice

Copyright © 2017, congatec GmbH. All rights reserved. All text, pictures and graphics are protected by copyrights. No copying is permitted without written permission from congatec GmbH.

congatec GmbH has made every attempt to ensure that the information in this document is accurate yet the information contained within is supplied "as-is".

Trademarks

Product names, logos, brands, and other trademarks featured or referred to within this user's guide, or the congatec website, are the property of their respective trademark holders. These trademark holders are not affiliated with congatec GmbH, our products, or our website.

Warranty

congatec GmbH makes no representation, warranty or guaranty, express or implied regarding the products except its standard form of limited warranty ("Limited Warranty") per the terms and conditions of the congatec entity, which the product is delivered from. These terms and conditions can be downloaded from www.congatec.com. congatec GmbH may in its sole discretion modify its Limited Warranty at any time and from time to time.

The products may include software. Use of the software is subject to the terms and conditions set out in the respective owner's license agreements, which are available at www.congatec.com and/or upon request.

Beginning on the date of shipment to its direct customer and continuing for the published warranty period, congatec GmbH represents that the products are new and warrants that each product failing to function properly under normal use, due to a defect in materials or workmanship or due to non conformance to the agreed upon specifications, will be repaired or exchanged, at congatec's option and expense.

Customer will obtain a Return Material Authorization ("RMA") number from congatec GmbH prior to returning the non conforming product freight prepaid. congatec GmbH will pay for transporting the repaired or exchanged product to the customer.

Repaired, replaced or exchanged product will be warranted for the repair warranty period in effect as of the date the repaired, exchanged or replaced product is shipped by congatec, or the remainder of the original warranty, whichever is longer. This Limited Warranty extends to congatec's direct customer only and is not assignable or transferable.

Except as set forth in writing in the Limited Warranty, congatec makes no performance representations, warranties, or guarantees, either express or implied, oral or written, with respect to the products, including without limitation any implied warranty (a) of merchantability, (b) of fitness for a particular purpose, or (c) arising from course of performance, course of dealing, or usage of trade.

congatec GmbH shall in no event be liable to the end user for collateral or consequential damages of any kind. congatec shall not otherwise be liable for loss, damage or expense directly or indirectly arising from the use of the product or from any other cause. The sole and exclusive remedy against congatec, whether a claim sound in contract, warranty, tort or any other legal theory, shall be repair or replacement of the product only.

Certification

congatec GmbH is certified to DIN EN ISO 9001 standard.

Technical Support

congatec GmbH technicians and engineers are committed to providing the best possible technical support for our customers so that our products can be easily used and implemented. We request that you first visit our website at www.congatec.com for the latest documentation, utilities and drivers, which have been made available to assist you. If you still require assistance after visiting our website then contact our technical support department by email at support@congatec.com

Terminology

Term	Description
GB	Gigabyte
GHz	Gigahertz
kB	Kilobyte
MB	Megabyte
Mbit	Megabit
MT/s	Megatransfers per second
kHz	Kilohertz
MHz	Megahertz
TDP	Thermal Design Power
PCIe	PCI Express
SATA	Serial ATA
DDC	Display Data Channel
SoC	System On Chip
LVDS	Low-Voltage Differential Signaling
Gbe	Gigabit Ethernet
HDA	High Definition Audio
cBC	congatec Board Controller
I/F	Interface
N.C.	Not connected
N.A.	Not available
TMDS	Transition-Minimized Differential Signaling
TBD	To be determined

1 Introduction

1.1 COM Express™ Concept

COM Express™ is an open industry standard defined specifically for COMs (computer on modules). Its creation makes it possible to smoothly transition from legacy interfaces to the newest technologies available today. COM Express™ modules are available in following form factors:

- Mini 84 mm x 55 mm
- Compact 95 mm x 95 mm
- Basic 125 mm x 95 mm
- Extended 155 mm x 110 mm

The COM Express™ specification 2.1 defines seven different pinout types.

Types	Connector Rows	PCI Express Lanes	PCI	IDE Channels	LAN ports	USB 2.0/ USB 3.0	Display Interfaces
Type 1	A-B	Up to 6			1	8 / 0	VGA, LVDS
Type 2	A-B C-D	Up to 22	32 bit	1	1	8 / 0	VGA, LVDS,PEG/SDVO
Type 3	A-B C-D	Up to 22	32 bit		3	8 / 0	VGA,LVDS,PEG/SDVO
Type 4	A-B C-D	Up to 32		1	1	8 / 0	VGA,LVDS,PEG/SDVO
Type 5	A-B C-D	Up to 32			3	8 / 0	VGA,LVDS,PEG/SDVO
Type 6	A-B C-D	Up to 24			1	8 / 4	VGA,LVDS,PEG, 3x DDI
Type 10	A-B	Up to 4			1	8 / 0	1x DDI

The conga-TC97 modules use the Type 6 pinout definition and comply with COM Express 2.1 specification. They are equipped with two high performance connectors that ensure stable data throughput.

The COM (computer on module) integrates all the core components and is mounted onto an application specific carrier board. COM modules are legacy-free design (no Super I/O, PS/2 keyboard and mouse) and provide most of the functional requirements for any application. These functions include, but are not limited to a rich complement of contemporary high bandwidth serial interfaces such as PCI Express, Serial ATA, USB 2.0, and Gigabit Ethernet. The Type 6 pinout provides the ability to offer PCI Express, Serial ATA, and LPC options thereby expanding the range of potential peripherals. The robust thermal and mechanical concept, combined with extended power-management capabilities, is perfectly suited for all applications.

Carrier board designers can use as little or as many of the I/O interfaces as deemed necessary. The carrier board can therefore provide all the interface connectors required to attach the system to the application specific peripherals. This versatility allows the designer to create a dense and optimized package, which results in a more reliable product while simplifying system integration. Most importantly, COM Express™ modules are scalable, which means once an application has been created there is the ability to diversify the product range through the use of different performance class or form factor size modules. Simply unplug one module and replace it with another; no redesign is necessary.

1.2 Options Information

The conga-TC97 is currently available in three variants. The table below shows the different configurations available.

Table 1 conga-TC97 Variants

Part-No.	045103	045104	045105	045106
Processor	Intel® Core™ i7-5650U 2.2 GHz Dual Core™	Intel® Core™ i5-5350U 1.8 GHz Dual Core™	Intel® Core™ i3-5010U 2.1 GHz Dual Core™	Intel® Celeron® 3765U 1.9 GHz Dual Core™
Intel® Smart Cache	4 MByte	3 MByte	3 MByte	2 MByte
Max. Turbo Frequency	3.2 GHz	2.9 GHz	N.A	N.A
Processor Graphics	Intel® HD graphics 6000 (GT3)	Intel® HD graphics 6000 (GT3)	Intel® HD graphics 5500 (GT2)	Intel® HD graphics (GT1)
Graphics Max. Dynamic Freq	1.0 GHz	1.0 GHz	0.9 GHz	0.85 GHz
Memory (DDR3L)	1600 MT/s dual channel	1600 MT/s dual channel	1600 MT/s dual channel	1600 MT/s dual channel
LVDS	Yes	Yes	Yes	Yes
DP++	Yes	Yes	Yes	Yes
Processor TDP (Max)	15 W	15 W	15 W	15 W

2 Specifications

2.1 Feature List

Table 2 Feature Summary

Form Factor	Based on COM Express™ standard pinout Type 6 Rev. 2.1 (Compact size 95 x 95 mm)	
Processor	5th Generation Intel® Core™ i7,i5, i3 Single Chip Ultra Low TDP Processors	
Memory	Two memory sockets (located on the top and bottom side of the conga-TC97). Supports - SO-DIMM non-ECC DDR3L (low voltage @ 1.35V) modules - Data rates up to 1600 MT/s - Maximum 32 GB capacity	
Chipset	Intel® 9 Series PCH-LP integrated in the Multi-Chip Package	
Audio	High Definition Audio (HDA)/digital audio interface with support for multiple codecs	
Ethernet	Gigabit Ethernet support via the onboard Intel® I218LM GbE Phy. Also offers AMT 10 support	
Graphics Options	Next Generation Intel® HD Graphics (6000/5500). Supports: - Intel® Clear Video Technology (HD encode/transcode, Blu-ray playback) - DirectX Video Acceleration (full AVC/VC1/MPEG2 hardware decode) - OpenGL 4.0 and DirectX11.1. Up to 3 independent displays supported (Must be two DDI's (DP, TMDS) plus one eDP/LVDS)	
	2x DP++ 1x LVDS Optional eDP interface (assembly option) Optional VGA interface (assembly option)	**NOTE**: 1 *LVDS will not be supported if optional eDP is implemented.* 2 *Only hardware revisions C.x and later offer optional VGA.* 3 *The conga-TC97 does not natively support TMDS. A DP++ to TMDS converter (e.g. PTN3360D) needs to be implemented.*
Peripheral Interfaces	4x SATA® 6Gb/s with RAID support 0/1/5/10 4x PCI Express® Lanes (can be configured via special/customized BIOS firmware to support four x1 or one x4 links. 8x USB 2.0 2x USB 3.0 2x UART	LPC Bus I²C Bus, Fast Mode, multi-master SM Bus SPI GPIOs
congatec Board Controller	Multi-stage watchdog, non-volatile user data storage, manufacturing and board information, board statistics, hardware monitoring, fan control, I2C bus, Power loss control	
BIOS	AMI Aptio® V UEFI 2.x firmware, 8 or 16 MB serial SPI with congatec Embedded BIOS features	
Power Management	ACPI 4.0 compliant with battery support. Also supports Suspend to RAM (S3) and Intel AMT 10 Configurable TDP Ultra low standby power consumption, Deep Sx.	
Security	Optional discrete Trusted Platform Module "TPM 1.2/2.0"; new AES Instructions for faster and better encryption	

Copyright © 2015 congatec GmbH

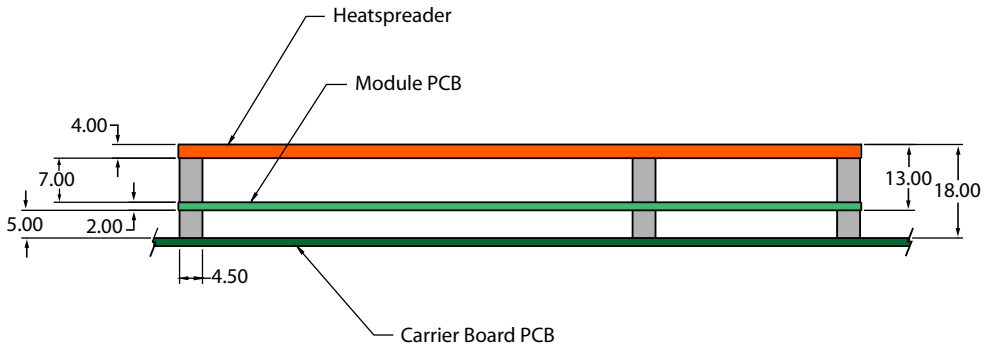
2.2 Supported Operating Systems

The conga-TC97 supports the following operating systems.

- Microsoft® Windows® 10
- Microsoft® Windows® 8
- Microsoft® Windows® 7
- Microsoft® Windows® Embedded Standard
- Linux

2.3 Mechanical Dimensions

- 95.0 mm x 95.0 mm (3.74" x 3.74")
- Height approximately 18 or 21mm (including heatspreader) depending on the carrier board connector that is used. If the 5mm (height) carrier board connector is used, then approximate overall height is 18mm. If the 8mm (height) carrier board connector is used, then approximate overall height is 21mm.

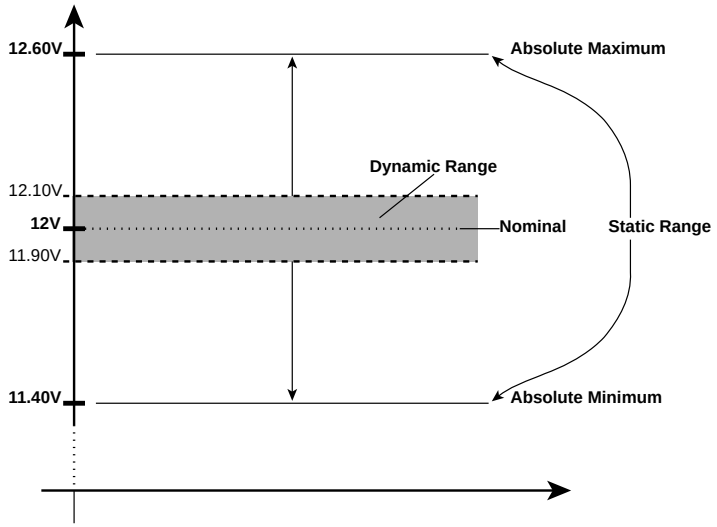


Copyright © 2015 congatec GmbH

2.4 Supply Voltage Standard Power

- 12V DC ± 5%

The dynamic range shall not exceed the static range.



2.4.1 Electrical Characteristics

Power supply pins on the module's connectors limit the amount of input power. The following table provides an overview of the limitations for pinout Type 6 (dual connector, 440 pins).

Power Rail	Module Pin Current Capability (Ampere)	Nominal Input (Volts)	Input Range (Volts)	Derated Input (Volts)	Max. Input Ripple (10Hz to 20MHz) (mV)	Max. Module Input Power (w. derated input) (Watts)	Assumed Conversion Efficiency	Max. Load Power (Watts)
VCC_12V	12	12	11.4-12.6	11.4	+/- 100	137	85%	116
VCC_5V-SBY	2	5	4.75-5.25	4.75	+/- 50	9		
VCC_RTC	0.5	3	2.0-3.3		+/- 20			

2.4.2 Rise Time

The input voltages shall rise from 10% of nominal to 90% of nominal at a minimum slope of 250V/s. The smooth turn-on requires that, during the 10% to 90% portion of the rise time, the slope of the turn-on waveform must be positive.

Copyright © 2015 congatec GmbH

2.5 Power Consumption

The power consumption values were measured with the following setup:

- conga-TC97 COM
- modified congatec carrier board
- conga-TC97 cooling solution
- Microsoft Windows 7 (64 bit)

Note

The CPU was stressed to its maximum workload with the Intel® Thermal Analysis Tool

Table 3 Measurement Description

The power consumption values were recorded during the following system states:

System State	Description	Comment
S0: Minimum value	Lowest frequency mode (LFM) with minimum core voltage during desktop idle	The CPU was stressed to its maximum frequency
S0: Maximum value	Highest frequency mode (HFM/Turbo Boost).	The CPU was stressed to its maximum frequency
S0: Peak value	Highest current spike during the measurement of "S0: Maximum value". This state shows the peak value during runtime	Consider this value when designing the system's power supply to ensure that sufficient power is supplied during worst case scenarios
S3	COM is powered by VCC_5V_SBY	
S5	COM is powered by VCC_5V_SBY	

Note

1. *The fan and SATA drives were powered externally.*
2. *All other peripherals except the LCD monitor were disconnected before measurement.*

Copyright © 2015 congatec GmbH

Table 4 Power Consumption Values

The table below provides additional information about the conga-TC97 power consumption. The values were recorded at various operating modes.

Part No.	Memory Size	H.W Rev.	BIOS Rev.	OS (64 bit)	CPU			Current (A)			
					Variant	Cores	Freq. /Turbo (GHz)	S0: Min	S0: Max	S0: Peak	S3
045103	4 GB	D.0	BV97R003	Windows 7	Intel® Core™ i7-5650U	2	2.2 / 3.2	0.28	1.50	2.13	0.08
045104	4 GB	D.0	BV97R003	Windows 7	Intel® Core™ i5-5350U	2	1.8 / 2.9	0.29	1.43	1.72	0.14
045105	4 GB	D.0	BV97R003	Windows 7	Intel® Core™ i3-7100U	2	2.4 / N.A	0.27	1.18	N.A	0.12
045106	4 GB	D.2	BU97R018	Windows 7	Intel® Celeron® 3965U	2	2.2 / N.A	0.26	0.93	1.58	0.11

Note

With fast input voltage rise time, the inrush current may exceed the measured peak current.

2.6 Supply Voltage Battery Power

Table 5 CMOS Battery Power Consumption

RTC @	Voltage	Current
-10°C	3V DC	1.56 µA
20°C	3V DC	1.82 µA
70°C	3V DC	3.60 µA

Note

1. *Do not use the CMOS battery power consumption values listed above to calculate CMOS battery lifetime.*
2. *Measure the CMOS battery power consumption in your customer specific application in worst case conditions (for example, during high temperature and high battery voltage).*
3. *Consider also the self-discharge of the battery when calculating the lifetime of the CMOS battery. For more information, refer to application note AN9_RTC_Battery_Lifetime.pdf on congatec GmbH website at www.congatec.com/support/application-notes.*
4. *We recommend to always have a CMOS battery present when operating the conga-TC97.*

Copyright © 2015 congatec GmbH

2.7 Environmental Specifications

Temperature	Operation: 0° to 60°C	Storage: -20° to +80°C
Humidity	Operation: 10% to 90%	Storage: 5% to 95%

Caution

The above operating temperatures must be strictly adhered to at all times. When using a congatec heatspreader, the maximum operating temperature refers to any measurable spot on the heatspreader's surface.

Humidity specifications are for non-condensing conditions.

Copyright © 2015 congatec GmbH

4 Cooling Solutions

congatec GmbH offers the following cooling solutions for the conga-TC97. The dimensions of the cooling solutions are shown in the sub-sections. All measurements are in millimeters.

Table 6 Cooling Solution Variants

	Cooling Solution	Part No	Description
1	HSP	045230	Heatspreader with 2.7 mm bore-hole standoffs
		045231	Heatspreader with M2.5 mm threaded standoffs
2	CSP	045232	Passive cooling solution with 2.7 mm bore-hole standoffs
		045233	Passive cooling solution with M2.5 mm threaded standoffs
3	CSA	045234	Active cooling solution with 2.7 mm bore-hole standoffs
		045235	Active cooling with M2.5 mm threaded standoffs

Note

1. *We recommend a maximum torque of 0.4 Nm for carrier board mounting screws and 0.5 Nm for module mounting screws.*

2. *The gap pad material used on congatec heatspreaders may contain silicon oil that can seep out over time depending on the environmental conditions it is subjected to. For more information about this subject, contact your local congatec sales representative and request the gap pad material manufacturer's specification.*

Caution

1. *The congatec heatspreaders/cooling solutions are tested only within the commercial temperature range of 0° to 60°C. Therefore, if your application that features a congatec heatspreader/cooling solution operates outside this temperature range, ensure the correct operating temperature of the module is maintained at all times. This may require additional cooling components for your final application's thermal solution.*

2. *For adequate heat dissipation, use the mounting holes on the cooling solution to attach it to the module. Apply thread-locking fluid on the screws if the cooling solution is used in a high shock and/or vibration environment. To prevent the standoff from stripping or cross-threading, use non-threaded carrier board standoffs to mount threaded cooling solutions.*

3. *For applications that require vertically-mounted cooling solution, use only coolers that secure the thermal stacks with fixing post. Without the fixing post feature, the thermal stacks may move.*

4. *Do not exceed the recommended maximum torque. Doing so may damage the module or the carrier board, or both.*

5 Connector Rows

The conga-TC97 is connected to the carrier board via two 220-pin connectors (COM Express Type 6 pinout). These connectors are broken down into four rows. The primary connector consists of rows A and B while the secondary connector consists of rows C and D.

5.1 Primary and Secondary Connector Rows

The following subsystems can be found on the primary and secondary connector rows.

5.1.1 PCI Express™

The conga-TC97 offers four PCI Express™ lanes on the A–B connector. The lanes support the following:

- up to 5 GT/s (Gen 2) speed
- default 4 x1 link configuration
- a 1 x4 link or a 2 x2 link via a special/customized BIOS firmware

5.1.2 PCI Express Graphics (PEG)

The Intel® ULT SoC does not support PEG interface.

5.1.3 Display Interfaces

The conga-TC97 supports the following:

- up to two DP++
- single- or dual-channel LVDS
- optional VGA [1] on revision C.x and later
- up to three independent displays (display combinations must be two DP++ (DP/TMDS) and one LVDS/eDP)

Note

1. *DDI2 supports optional VGA on revision C.x and later.*

Copyright © 2015 congatec GmbH

Table 7 Display Combination (U-processor line)

Display 1 (DDI1)	Display 2 (DDI2)	Display 3	Display 1 Max. Resolution	Display 2 Max. Resolution	Display 3 Max. Resolution
TMDS	TMDS	LVDS/eDP	4096x2304 @24Hz	4096x2304 @24Hz	3840x2160 @60Hz
DP	DP	LVDS/eDP	3840x2160 @60Hz	3840x2160 @60Hz	3840x2160 @60Hz
TMDS	DP	LVDS/eDP	4096x2304 @24Hz	3840x2160 @60Hz	3840x2160 @60Hz
DP	TMDS	LVDS/eDP	3840x2160 @60Hz	4096x2304 @24Hz	3840x2160 @60Hz

Note

1. *DP and eDP resolutions are supported for 4 lanes with link data rate HBR2 at 24 bits per pixel and single stream mode of operation.*
2. *DisplayPort Aux CH, DDC channel, panel power sequencing and HPD are supported through the PCH.*

5.1.3.1 DisplayPort (DP)

The conga-TC97 offers up to two DP ports. The ports support:

- VESA DisplayPort Standard 1.2
- data rate of 1.62 GT/s, 2.97 GT/s and 5.4 GT/s on 1, 2 or 4 data lanes
- up to 3840x2160 resolutions at 60 Hz
- Audio formats such as AC-3 Dolby Digital, Dolby Digital Plus, DTS-HD, LPCM, 192 KHz/24 bit, 8 channel, Dolby TrueHD, DTS-HD Master Audio (Lossless Blu-Ray Disc Audio Format)

Note

1. *The conga-TC97 supports a maximum of two independent DP displays.*
2. *Revisions equipped with optional VGA interface support only one DP interface*

5.1.3.2 VGA

The Intel® ULT SoC does not support VGA interface; however, the conga-TC97 supports an optional VGA interface on DDI2 via NXP PTN3392BS Displayport to VGA controller.

Note

Revisions equipped with optional VGA interface support only one DDI interface (DP/TMDS).

Copyright © 2015 congatec GmbH

5.1.3.3 LVDS/eDP

The conga-TC97 offers an LVDS interface with optional eDP overlay on the A–B connector. The LVDS/eDP interface is configured to provide LVDS signals by default. The interface can optionally support eDP signals via a hardware change (assembly option).

The LVDS interface supports:

- single or dual channel LVDS (color depths of 18 bpp or 24 bpp)
- integrated flat panel interface with clock frequency up to 112 MHz
- automatic panel detection via Embedded Panel Interface
- VESA and OpenLDI LVDS color mappings
- resolution up to 1920x1200 in dual LVDS mode

Note

The LVDS/eDP interface supports either LVDS or eDP signals. Both signals are not supported simultaneously.

5.1.4 SATA

The conga-TC97 provides four SATA interfaces (SATA 0-3) on the A–B connector. The interfaces support:

- SATA specification, revision 3.0
- data transfer rates up to 6.0 Gb/s
- AHCI mode using memory space and RAID mode
- Hot-plug detect in non-native IDE mode

Note

The interface does not support legacy mode using I/O space.

Copyright © 2015 congatec GmbH

5.1.5 USB

The conga-TC97 offers eight USB 2.0 interfaces on the A–B connector and two SuperSpeed signals on the C–D connector. The EHCI host controller supports high-speed, full-speed and low-speed USB signaling and also complies with USB standard 1.1 and 2.0. The xHCI host controller allows data transfers of up to 5 Gb/s and supports SuperSpeed, high-speed, full-speed and low-speed traffic.

For more information about how the USB host controllers are routed, see section 7.4.

Note

The xHCI controller supports USB 3.0 debugging.

5.1.6 Gigabit Ethernet

The conga-TC97 offers a Gigabit Ethernet interface via an onboard Intel® i218-LM Phy. The interface supports full-duplex operation at 10/100/1000 Mbps and half-duplex operation at 10/100 Mbps.

Note

1. *The GBE0_LINK# output is not active during a 10 Mb connection. It is only active during a 100 Mb or 1 Gb connection. This is a limitation of Ethernet Phy since it has only three LED outputs—ACT#, LINK100# and LINK1000#.*

2. *The GBE0_LINK# signal is a logic AND of the GBE0_LINK100# and GBE0_LINK1000# signals on the conga-TC97 module.*

5.1.7 High Definition Audio (HDA) Interface

The conga-TC97 provides an HDA interface for audio codec on the A–B connector.

5.1.8 LPC Bus

The conga-TC97 offers the LPC (Low Pin Count) bus through the Intel® 9 Series PCH-LP. For information about the decoded LPC addresses, see section 9.1.1 "LPC Bus"

Copyright © 2015 congatec GmbH

5.1.9 I²C Bus Fast Mode

The I²C bus is implemented through the congatec board controller (Texas Instruments Tiva™ TM4E1231H6ZRB) and accessed through the congatec CGOS driver and API. The controller provides a fast mode multi-master I²C Bus that has maximum I²C bandwidth.

5.1.10 ExpressCard™

The conga-TC97 supports the implementation of ExpressCards, which requires the dedication of one USB 2.0 port or a x1 PCI Express link for each ExpressCard used.

5.1.11 General Purpose Serial Interface

The conga-TC97 offers two UART interfaces via two UART controllers integrated in the congatec Board Controller. These controllers support up to 1 MB/s and can operate in low-speed, full-speed and high-speed modes. The UART interfaces are routed to the A–B connector.

Note

1. *The UART interfaces require congatec driver to function.*

2. *The UART interfaces do not support legacy COM port emulation.*

5.1.12 Power Control

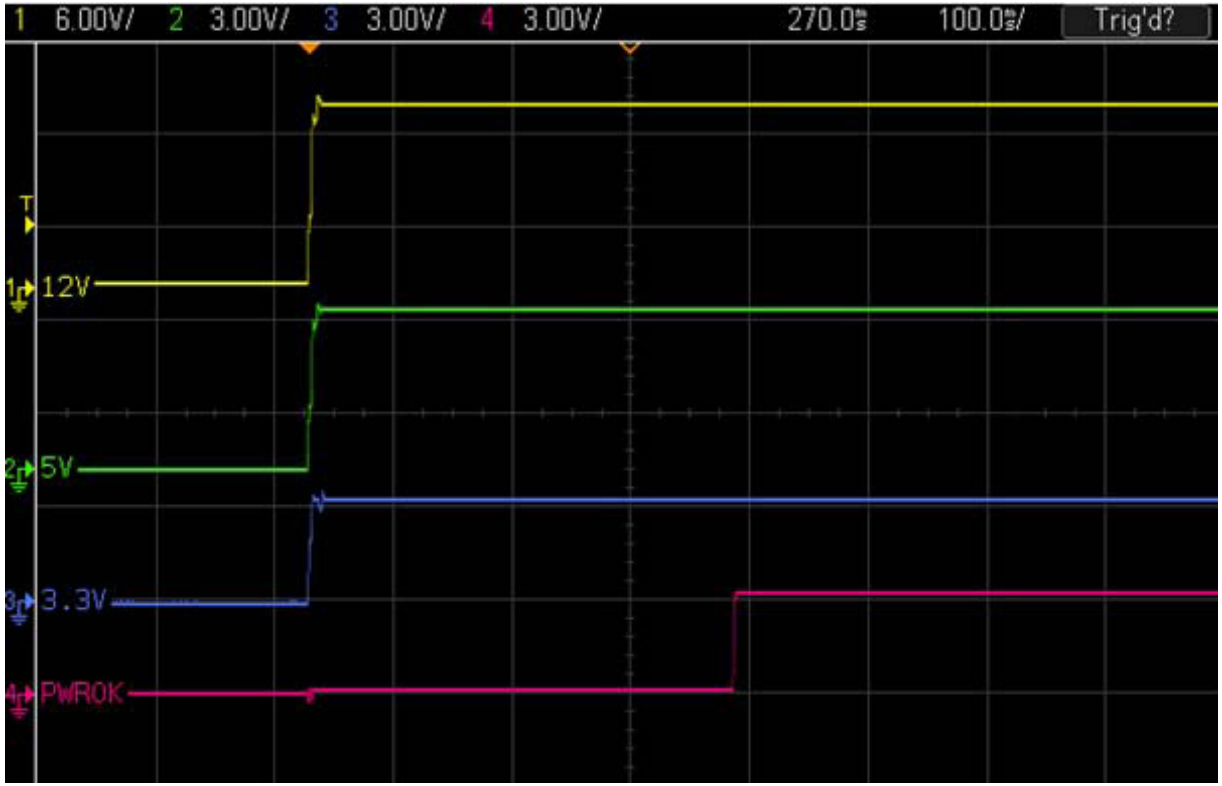
PWR_OK

Power OK from main power supply or carrier board voltage regulator circuitry. A high value indicates that the power is good and the module can start its onboard power sequencing.

Carrier board hardware must drive this signal low until all power rails and clocks are stable. Releasing PWR_OK too early or not driving it low at all can cause numerous boot up problems. It is a good design practice to delay the PWR_OK signal a little (typically 100ms) after all carrier board power rails are up, to ensure a stable system.

A sample screenshot is shown below:

Copyright © 2015 congatec GmbH

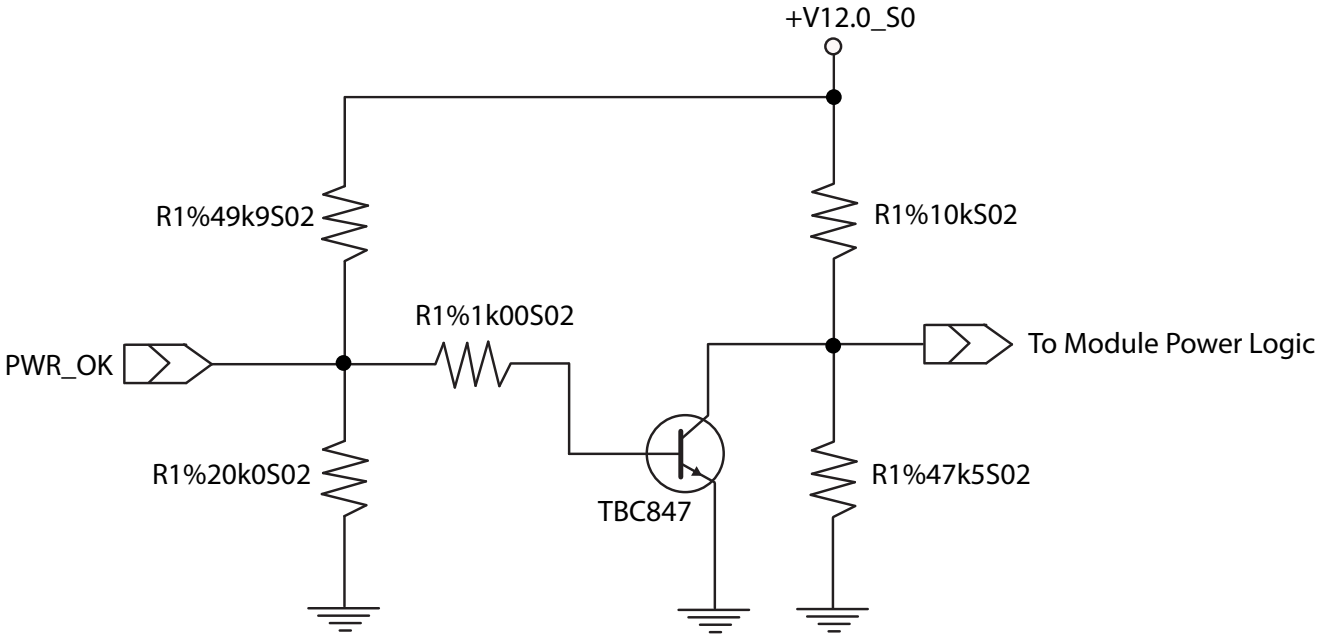


Note

The module is kept in reset as long as the PWR_OK is driven by carrier board hardware.

Copyright © 2015 congatec GmbH

The conga-TC97 PWR_OK input circuitry is implemented as shown below:



The voltage divider ensures that the input complies with 3.3V CMOS characteristic and also allows for carrier board designs that are not driving PWR_OK. Although the PWR_OK input is not mandatory for the onboard power-up sequencing, it is strongly recommended that the carrier board hardware drives the signal low until it is safe to let the module boot-up.

When considering the above shown voltage divider circuitry and the transistor stage, the voltage measured at the PWR_OK input pin may be only around 0.8V when the 12V is applied to the module. Actively driving PWR_OK high is compliant to the COM Express specification but this can cause back driving. Therefore, congatec recommends driving the PWR_OK low to keep the module in reset and tri-state PWR_OK when the carrier board hardware is ready to boot.

The three typical usage scenarios for a carrier board design are:

- Connect PWR_OK to the “power good” signal of an ATX type power supply.
- Connect PWR_OK to the last voltage regulator in the chain on the carrier board.
- Simply pull PWR_OK with a 1k resistor to the carrier board 3.3V power rail.

With this solution, it must be ensured that by the time the 3.3V is up, all carrier board hardware is fully powered and all clocks are stable.

Copyright © 2015 congatec GmbH

The conga-TC97 provides support for controlling ATX-style power supplies. When not using an ATX power supply then the conga-TC97's pins SUS_S3/PS_ON, 5V_SB, and PWRBTN# should be left unconnected.

SUS_S3#/PS_ON#

The SUS_S3#/PS_ON# (pin A15 on the A-B connector) signal is an active-low output that can be used to turn on the main outputs of an ATX-style power supply. In order to accomplish this the signal must be inverted with an inverter/transistor that is supplied by standby voltage and is located on the carrier board.

PWRBTN#

When using ATX-style power supplies PWRBTN# (pin B12 on the A-B connector) is used to connect to a momentary-contact, active-low debounced push-button input while the other terminal on the push-button must be connected to ground. This signal is internally pulled up to 3V_SB using a 10k resistor. When PWRBTN# is asserted it indicates that an operator wants to turn the power on or off. The response to this signal from the system may vary as a result of modifications made in BIOS settings or by system software.

Power Supply Implementation Guidelines

The 12 volt input power is the sole operational power source for the conga-TC97. Other required voltages are generated internally on the module using onboard voltage regulators.

Note

When designing a power supply for a conga-TC97 application, be aware that the system may malfunction when a 12V power supply that produces non-monotonic voltage is used to power the system up. Though this problem is rare, it has been observed in some mobile power supply applications.

The cause of this problem is that some internal circuits on the module (e.g. clock-generator chips) generate their own reset signals when the supply voltage exceeds a certain voltage threshold. A voltage dip after passing this threshold may lead to these circuits becoming confused, thereby resulting in a malfunction.

To ensure this problem does not occur, observe the power supply rise waveform through an oscilloscope, during the power supply qualication phase. This will help to determine if the rise is indeed monotonic and does not have any dips. For more information, see the "Power Supply Design Guide for Desktop Platform Form Factors" document at www.intel.com.

Copyright © 2015 congatec GmbH

5.1.13 Power Management

ACPI

The conga-TC97 supports Advanced Configuration and Power Interface (ACPI) specification, revision 4.0a. It also supports Suspend to RAM (S3). For more information, see section 7.2 “ACPI Suspend Modes and Resume Events”.

DEEP Sx

The Deep Sx is a lower power state employed to minimize the power consumption while in S3/S4/S5. In the Deep Sx state, the system entry condition determines if the system context is maintained or not. All power is shut off except for minimal logic which supports limited set of wake events for Deep Sx. The Deep Sx on resumption, puts system back into the state it is entered from. In other words, if Deep Sx state was entered from S3 state, then the resume path will place system back into S3.

Copyright © 2015 congatec GmbH

6 Additional Features

6.1 congatec Board Controller (cBC)

The conga-TC97 is equipped with Texas Instruments Tiva™ TM4E1231H6ZRB microcontroller. This onboard microcontroller plays an important role for most of the congatec embedded/industrial PC features. It fully isolates some of the embedded features such as system monitoring or the I²C bus from the x86 core architecture, which results in higher embedded feature performance and more reliability, even when the x86 processor is in a low power mode. It also ensures that the congatec embedded feature set is fully compatible amongst all congatec modules.

The board controller supports the following features:

6.1.1 Board Information

The cBC provides a rich data-set of manufacturing and board information such as serial number, EAN number, hardware and firmware revisions, and so on. It also keeps track of dynamically changing data like runtime meter and boot counter.

6.1.2 Watchdog

The conga-TC97 is equipped with a multi stage watchdog solution that is triggered by software. The COM Express™ Specification does not provide support for external hardware triggering of the Watchdog, which means the conga-TC97 does not support external hardware triggering. For more information about the Watchdog feature, see the BIOS setup description in section 10.4.2 of this document and application note AN3_Watchdog.pdf on the congatec GmbH website at www.congatec.com.

Note

The conga-TC97 module does not support the watchdog NMI mode.

6.1.3 I²C Bus

The conga-TC97 supports I²C bus. Thanks to the I²C host controller in the cBC, the I²C bus is multi-master capable and runs at fast mode.

6.1.4 Power Loss Control

The cBC has full control of the power-up of the module and therefore can be used to specify the behavior of the system after an AC power loss condition. Supported modes are “Always On”, “Remain Off” and “Last State”.

Copyright © 2015 congatec GmbH

6.1.5 Fan Control

The conga-TC97 has additional signals and functions to further improve system management. One of these signals is FAN_PWMOUT, an output signal that allows system fan control using a PWM (Pulse Width Modulation) output. Additionally, there is an input signal called FAN_TACHOIN that provides the ability to monitor the system's fan RPMs (revolutions per minute). This signal must receive two pulses per revolution in order to produce an accurate reading. For this reason, a two pulse per revolution fan or similar hardware solution is recommended.

Note

1. *A four wire fan must be used to generate the correct speed readout.*

2. *For the correct fan control (FAN_PWMOUT, FAN_TACHIN) implementation, see the COM Express Design Guide.*

6.2 OEM BIOS Customization

The conga-TC97 is equipped with congatec Embedded BIOS, which is based on American Megatrends Inc. Aptio UEFI firmware. The congatec Embedded BIOS allows system designers to modify the BIOS. For more information about customizing the congatec Embedded BIOS, refer to the congatec System Utility user's guide, which is called CGUTLm1x.pdf and can be found on the congatec website at www.congatec.com or contact technical support.

The customization features supported are described below:

6.2.1 OEM Default Settings

This feature allows system designers to create and store their own BIOS default configuration. Customized BIOS development by congatec for OEM default settings is no longer necessary because customers can easily perform this configuration by themselves using the congatec system utility CGUTIL. See congatec application note AN8_Create_OEM_Default_Map.pdf on the congatec website for details on how to add OEM default settings to the congatec Embedded BIOS.

6.2.2 OEM Boot Logo

This feature allows system designers to replace the standard text output displayed during POST with their own BIOS boot logo. Customized BIOS development by congatec for OEM Boot Logo is no longer necessary because customers can easily perform this configuration by themselves using the congatec system utility CGUTIL. See congatec application note AN8_Create_And_Add_Bootlogo.pdf on the congatec website for details on how to add OEM boot logo to the congatec Embedded BIOS.

Copyright © 2015 congatec GmbH

6.2.3 OEM POST Logo

This feature allows system designers to replace the congatec POST logo displayed in the upper left corner of the screen during BIOS POST with their own BIOS POST logo. Use the congatec system utility CGUTIL 1.5.4 or later to replace/add the OEM POST logo.

6.2.4 OEM BIOS Code/Data

With the congatec embedded BIOS it is possible for system designers to add their own code to the BIOS POST process. The congatec Embedded BIOS first calls the OEM code before handing over control to the OS loader.

Except for custom specific code, this feature can also be used to support Win XP SLP installation, Window 7 SLIC table (OA2.0), Windows 8 OEM activation (OA3.0), verb tables for HDA codecs, PCI/PCIe opROMs, bootloaders, rare graphic modes and Super I/O controller initialization.

Note

The OEM BIOS code of the new UEFI based firmware is only called when the CSM (Compatibility Support Module) is enabled in the BIOS setup menu. Contact congatec technical support for more information on how to add OEM code.

6.2.5 OEM DXE Driver

This feature allows designers to add their own UEFI DXE driver to the congatec embedded BIOS. Contact congatec technical support for more information on how to add an OEM DXE driver.

6.3 congatec Battery Management Interface

In order to facilitate the development of battery powered mobile systems based on embedded modules, congatec GmbH has defined an interface for the exchange of data between a CPU module (using an ACPI operating system) and a Smart Battery system. A system developed according to the congatec Battery Management Interface Specification can provide the battery management functions supported by an ACPI capable operating system (for example, charge state of the battery, information about the battery, alarms/events for certain battery states and so on) without the need for any additional modifications to the system BIOS.

In addtion to the ACPI-Compliant Control Method Battery mentioned above, the latest versions of the conga-TC97 BIOS and board controller firmware also support LTC1760 battery manager from Linear Technology and a battery only solution (no charger). All three battery solutions are supported on the I2C bus and the SMBus. This gives the system designer more flexibility when choosing the appropriate battery sub-system.

For more information about the supported Battery Manager interface, contact your local congatec sales representative.

Copyright © 2015 congatec GmbH

6.4 API Support (CGOS)

In order to benefit from the above mentioned non-industry standard feature set, congatec provides an API that allows application software developers to easily integrate all these features into their code. The CGOS API (congatec Operating System Application Programming Interface) is the congatec proprietary API that is available for all commonly used Operating Systems such as Win32, Win64, Win CE, Linux.

The architecture of the CGOS API driver provides the ability to write application software that runs unmodified on all congatec CPU modules. All the hardware related code is contained within the congatec embedded BIOS on the module. See section 1.1 of the CGOS API software developers guide, which is available on the congatec website .

6.5 Security Features

The conga-TC97 offers an optional "Trusted Platform Module (TPM 1.2/2.0)". This TPM 1.2/2.0 includes coprocessors to calculate efficient hash and RSA algorithms with key lengths up to 2,048 bits as well as a real random number generator. Security sensitive applications like gaming and e-commerce will benefit also with improved authentication, integrity and confidence levels.

6.6 Suspend to Ram

The Suspend to RAM feature is available on the conga-TC97.

Copyright © 2015 congatec GmbH

7 conga Tech Notes

The conga-TC97 has some technological features that require additional explanation. The following section will give the reader a better understanding of some of these features.

7.1 Intel® Processor Features

7.1.1 Thermal Monitor and Catastrophic Thermal Protection

Intel® Core™ i7/i5/i3 and Celeron® processors have a thermal monitor feature that helps to control the processor temperature. The integrated TCC (Thermal Control Circuit) activates if the processor silicon reaches its maximum operating temperature. The activation temperature that the Intel® Thermal Monitor uses to activate the TCC can be slightly modified via TCC Activation Offset in BIOS setup submenu "CPU submenu".

The Thermal Monitor can control the processor temperature through the use of two different methods defined as TM1 and TM2. TM1 method consists of the modulation (starting and stopping) of the processor clocks at a 50% duty cycle. The TM2 method initiates an Enhanced Intel Speedstep transition to the lowest performance state once the processor silicon reaches the maximum operating temperature.

THERMTRIP# signal is used by Intel®'s Core™ i7/i5/i3 and Celeron® processors for catastrophic thermal protection. If the processor's silicon reaches a temperature of approximately 125°C then the processor signal THERMTRIP# will go active and the system will automatically shut down to prevent any damage to the processor as a result of overheating. The THERMTRIP# signal activation is completely independent from processor activity and therefore does not produce any bus cycles.

Note

1. *For THERMTRIP# to switch off the system automatically, use an ATX style power supply.*
2. *The maximum operating temperature for Intel® Core™ i7/i5/i3 and Celeron® processors is 100°C.*
3. *To ensure that the TCC is active for only short periods of time, thus reducing the impact on processor performance to a minimum, it is necessary to have a properly designed thermal solution. The Intel® Core™ i7/i5/i3 and Celeron® processor's respective datasheet can provide you with more information about this subject.*

Copyright © 2015 congatec GmbH

7.1.2 Intel® Turbo Boost Technology

Intel® Turbo Boost Technology allows processor cores to run faster than the base operating frequency if it's operating below power, current, and temperature specification limits. Intel® Turbo Boost Technology is activated when the Operating System (OS) requests the highest processor performance state. The maximum frequency of Intel® Turbo Boost Technology is dependent on the number of active cores. The amount of time the processor spends in the Intel Turbo Boost 2 Technology state depends on the workload and operating environment. Any of the following can set the upper limit of Intel® Turbo Boost Technology on a given workload:

- Number of active cores
- Estimated current consumption
- Estimated power consumption
- Processor temperature

When the processor is operating below these limits and the user's workload demands additional performance, the processor frequency will dynamically increase by 100 MHz on short and regular intervals until the upper limit is met or the maximum possible upside for the number of active cores is reached. For more information about Intel® Turbo Boost 2 Technology visit the Intel® website.

Note

Only conga-TC97 module variants that feature the Core™ i7 and i5 processors support Intel® Turbo Boost 2 Technology. Refer to the power consumption tables in section 2.5 for information about the maximum turbo frequency available for each conga-TC97 variant.

7.1.3 Intel® Virtualization Technology

Intel® Virtualization Technology (Intel® VT) makes a single system appear as multiple independent systems to software. With this technology, multiple, independent operating systems can run simultaneously on a single system. The technology components support virtualization of platforms based on Intel architecture microprocessors and chipsets. Intel® Virtualization Technology for IA-32, Intel® 64 and Intel® Architecture (Intel® VT-x) added hardware support in the processor to improve the virtualization performance and robustness.

RTS Real-Time Hypervisor supports Intel VT and is verified on all current congatec x86 hardware.

Note

congatec supports RTS Hypervisor.

Copyright © 2015 congatec GmbH

7.1.4 Thermal Management

ACPI is responsible for allowing the operating system to play an important part in the system's thermal management. This results in the operating system having the ability to take control of the operating environment by implementing cooling decisions according to the demands put on the CPU by the application.

The conga-TC97 supports Critical Trip Point. This cooling policy ensures that the operating system shuts down properly if the temperature in the thermal zone reaches a critical point, in order to prevent damage to the system as a result of high temperatures. Use the "critical trip point" setup node in the BIOS setup program to determine the temperature threshold that the operating system will use to shut down the system.

Note

Use the setup nodes in the BIOS setup program to establish the appropriate trip points.

7.1.5 Processor Performance Control

Intel® Core™ i7/i5/i3 processors found on the conga-TC97 run at different voltage/frequency states (performance states), which is referred to as Enhanced Intel® SpeedStep® technology (EIST). Operating systems that support performance control take advantage of microprocessors that use several different performance states in order to efficiently operate the processor when it's not being fully used. The operating system will determine the necessary performance state that the processor should run at so that the optimal balance between performance and power consumption can be achieved during runtime.

The Windows family of operating systems links its processor performance control policy to the power scheme setting. You must ensure that the power scheme setting you choose has the ability to support Enhanced Intel® SpeedStep® technology.

Copyright © 2015 congatec GmbH

7.2 ACPI Suspend Modes and Resume Events

conga-TC97 supports S3 (Suspend to RAM). For more information about S3 wake events, see section 10.4.8 “ACPI Submenu”.

Note

S4 (Suspend to Disk) is not supported.

Table 8 Wake Events

The table below lists the events that wake the system from S3.

Wake Event	Conditions/Remarks
Power Button	Wakes unconditionally from S3-S5.
Onboard LAN Event	Device driver must be configured for Wake On LAN support.
SMBALERT#	Wakes unconditionally from S3-S5.
PCI Express WAKE#	Wakes unconditionally from S3-S5.
WAKE#	Wakes uncondionally from S3.
PME#	Activate the wake up capabilities of a PCI device using Windows Device Manager configuration options for this device OR set Resume On PME# to Enabled in the Power setup menu.
USB Mouse/Keyboard Event	When Standby mode is set to S3, USB hardware must be powered by standby power source. Set USB Device Wakeup from S3/S4 to ENABLED in the ACPI setup menu (if setup node is available in BIOS setup program). In Device Manager look for the keyboard/mouse devices. Go to the Power Management tab and check ‘Allow this device to bring the computer out of standby’.
RTC Alarm	Activate and configure Resume On RTC Alarm in the Power setup menu. Only available in S5.
Watchdog Power Button Event	Wakes unconditionally from S3-S5.

7.3 Low Voltage Memory (DDR3L)

The Intel Broadwell ULT processor featured on the conga-TC97 supports low voltage system memory interface. The memory interface I/O voltage is 1.35V and supports non-ECC, unbuffered DDR3L SO-DIMMs. With this low voltage system memory interface on the processor, the conga-TC97 offers a system optimized for lowest possible power consumption. The reduction in power consumption due to lower voltage subsequently reduces the heat generated.

Caution

DDR3@1.5V SO-DIMM modules may affect the stability or boot-up of the conga-TC97. Therefore use only non-ECC, unbuffered DDR3L SO-DIMM memory modules up to 1600 MT/s on the conga-TC97.

Copyright © 2015 congatec GmbH

7.4 USB 2.0 EHCI Host Controller Support

The eight available USB ports are provided by a USB 2.0 Rate Matching Hub (RMH) integrated in the Intel® 9 Series PCH-LP . The EHCI controller is connected to the hub as shown below. The Hub converts low and full-speed traffic into high-speed traffic. When the RMHs are enabled, they will appear to software like an external hub is connected to Port 0 of the EHCI controller. In addition, port 1 of the RMH is multiplexed with Port 1 of the EHCI controller and is able to bypass the RMH for use as the Debug Port. The hub operates like any USB 2.0 Discrete Hub and will consume one tier of hubs allowed by the USB 2.0 Specification.

A maximum of four additional non-root hubs can be supported on any of the PCH USB Ports. The RMH will report the following Vendor ID = 8087h and Product ID = 8000h.

Routing Diagram

8 Signal Descriptions and Pinout Tables

The following section describes the signals found on COM Express™ Type 6 connectors used for congatec GmbH modules. The pinout of the modules complies with COM Express Type 6 Rev. 2.1.

The table below describes the terminology used in this section. The PU/PD column indicates if a pull-up or pull-down resistor has been used. If the field entry area in this column for the signal is empty, then no pull-up or pull-down resistor has been implemented by congatec. The "#" symbol at the end of the signal name indicates that the active or asserted state occurs when the signal is at a low voltage level. When "#" is not present, the signal is asserted when at a high voltage level.

Note

The Signal Description tables do not list internal pull-ups or pull-downs implemented by the chip vendors; only pull-ups or pull-downs implemented by congatec are listed. For information about the internal pull-ups or pull-downs implemented by the chip vendors, refer to the respective chip's datasheet.

Table 9 Signal Tables Terminology Descriptions

Term	Description
PU	congatec implemented pull-up resistor
PD	congatec implemented pull-down resistor
I/O 3.3V	Bi-directional signal 3.3V tolerant
I/O 5V	Bi-directional signal 5V tolerant
I 3.3V	Input 3.3V tolerant
I 5V	Input 5V tolerant
I/O 3.3VSB	Input 3.3V tolerant active in standby state
O 3.3V	Output 3.3V signal level
O 5V	Output 5V signal level
OD	Open drain output
P	Power Input/Output
DDC	Display Data Channel
PCIE	In compliance with PCI Express Base Specification, Revision 2.0
PEG	PCI Express Graphics
SATA	In compliance with Serial ATA specification Revision 2.6 and 3.0.
REF	Reference voltage output. May be sourced from a module power plane.
PDS	Pull-down strap. A module output pin that is either tied to GND or is not connected. Used to signal module capabilities (pinout type) to the Carrier Board.

Copyright © 2015 congatec GmbH

8.1 Connector Signal Descriptions

Table 10 Connector A–B Pinout

Pin	Row A	Pin	Row B	Pin	Row A	Pin	Row B
A1	GND (FIXED)	B1	GND (FIXED)	A56	PCIE_TX4- (*)	B56	PCIE_RX4- (*)

Table 12 PCI Express Signal Descriptions (general purpose)

Signal	Pin #	Description	I/O	PU/PD	Comment
PCIE_RX0+ PCIE_RX0-	B68 B69	PCI Express channel 0, Receive Input differential pair.	I PCIE		Supports PCI Express Base Specification, Revision 2.0
PCIE_TX0+ PCIE_TX0-	A68 A69	PCI Express channel 0, Transmit Output differential pair.	O PCIE		Supports PCI Express Base Specification, Revision 2.0
PCIE_RX1+ PCIE_RX1-	B64 B65	PCI Express channel 1, Receive Input differential pair.	I PCIE		Supports PCI Express Base Specification, Revision 2.0
PCIE_TX1+ PCIE_TX1-	A64 A65	PCI Express channel 1, Transmit Output differential pair.	O PCIE		Supports PCI Express Base Specification, Revision 2.0
PCIE_RX2+ PCIE_RX2-	B61 B62	PCI Express channel 2, Receive Input differential pair.	I PCIE		Supports PCI Express Base Specification, Revision 2.0
PCIE_TX2+ PCIE_TX2-	A61 A62	PCI Express channel 2, Transmit Output differential pair.	O PCIE		Supports PCI Express Base Specification, Revision 2.0
PCIE_RX3+ PCIE_RX3-	B58 B59	PCI Express channel 3, Receive Input differential pair.	I PCIE		Supports PCI Express Base Specification, Revision 2.0
PCIE_TX3+ PCIE_TX3-	A58 A59	PCI Express channel 3, Transmit Output differential pair.	O PCIE		Supports PCI Express Base Specification, Revision 2.0
PCIE_RX4+ PCIE_RX4-	B55 B56	PCI Express channel 4, Receive Input differential pair.	I PCIE		Not supported
PCIE_TX4+ PCIE_TX4-	A55 A56	PCI Express channel 4, Transmit Output differential pair.	O PCIE		Not supported
PCIE_RX5+ PCIE_RX5-	B52 B53	PCI Express channel 5, Receive Input differential pair.	I PCIE		Not supported
PCIE_TX5+ PCIE_TX5-	A52 A53	PCI Express channel 5, Transmit Output differential pair.	O PCIE		Not supported
PCIE_RX6+ PCIE_RX6-	C19 C20	PCI Express channel 6, Receive Input differential pair.	I PCIE		Not supported
PCIE_TX6+ PCIE_TX6-	D19 D20	PCI Express channel 6, Transmit Output differential pair.	O PCIE		Not supported
PCIE_RX7+ PCIE_RX7-	C22 C23	PCI Express channel 7, Receive Input differential pair.	I PCIE		Not supported
PCIE_TX7+ PCIE_TX7-	D22 D23	PCI Express channel 7, Transmit Output differential pair.	O PCIE		Not supported
PCIE_CLK_REF+ PCIE_CLK_REF-	A88 A89	PCI Express Reference Clock output for all PCI Express and PCI Express Graphics Lanes.	O PCIE		A PCI Express Gen2/3 compliant clock buffer chip must be used on the carrier board if the design involves more than one PCI Express device.

HDMI3_CTRLDATA	C37	TMDS I²C Control Data Multiplexed with DDI3_CTRLDATA_AUX-	I/O OD 3.3V		Not supported

Note

1. *These signals have special functionality during the reset process. They may bootstrap some basic important functions of the module. For more information refer to section 8.2 of this user's guide.*

2. *The conga-TC97 does not natively support TMDS. A DP++ to TMDS converter (e.g. PTN3360D) needs to be implemented.*

Gigabit Ethernet	Pin #	Description	I/O	PU/PD	Comment
GBE0_ACT#	B2	Gigabit Ethernet Controller 0 activity indicator, active low.	O 3.3VSB		
GBE0_LINK#	A8	Gigabit Ethernet Controller 0 link indicator, active low.	O 3.3VSB		
GBE0_LINK100#	A4	Gigabit Ethernet Controller 0 100Mbit/sec link indicator, active low.	O 3.3VSB		
GBE0_LINK1000#	A5	Gigabit Ethernet Controller 0 1000Mbit/sec link indicator, active low.	O 3.3VSB		
GBE0_CTREF	A14	Reference voltage for Carrier Board Ethernet channel 0 magnetics center tap. The reference voltage is determined by the requirements of the module PHY and may be as low as 0V and as high as 3.3V. The reference voltage output shall be current limited on the module. In the case in which the reference is shorted to ground, the current shall be limited to 250mA or less.			Not connected

Note

1. *The GBE0_LINK# output is not active during a 10 Mb connection. It is only active during a 100 Mb or 1 Gb connection. This is a limitation of Ethernet Phy since it has only three LED outputs—ACT#, LINK100# and LINK1000#.*

2. *The GBE0_LINK# signal is a logic AND of the GBE0_LINK100# and GBE0_LINK1000# signals on the conga-TC97 module.*

Table 24 Intel® High Definition Audio Link Signals Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
AC/HDA_RST#	A30	Intel® High Definition Audio Reset: This signal is the master hardware reset to external codec(s).	O 3.3VSB		AC'97 codecs are not supported.
AC/HDA_SYNC	A29	Intel® High Definition Audio Sync: This signal is a 48 kHz fixed rate sample sync to the codec(s). It is also used to encode the stream number.	O 3.3VSB		AC'97 codecs are not supported.
AC/HDA_BITCLK	A32	Intel® High Definition Audio Bit Clock Output: This signal is a 24.000MHz serial data clock generated by the Intel® High Definition Audio controller.	O 3.3VSB		AC'97 codecs are not supported.
AC/HDA_SDOUT [1]	A33	Intel® High Definition Audio Serial Data Out: This signal is the serial TDM data output to the codec(s). This serial output is double-pumped for a bit rate of 48 Mb/s for Intel® High Definition Audio.	O 3.3VSB	PU 1K 3.3VSB	AC'97 codecs are not supported. AC/HDA_SDOUT is a boot strap signal.
AC/HDA_SDIN[2:0]	B28-B30	Intel® High Definition Audio Serial Data In [0]: These signals are serial TDM data inputs from the three codecs. The serial input is single-pumped for a bit rate of 24 Mb/s for Intel® High Definition Audio.	I 3.3VSB		AC'97 codecs are not supported.

Note

1. *The signal has special functionality during the reset process. It may bootstrap some basic important functions of the module. For more information refer to section 8.2 of this user's guide.*

Table 30 Power and System Management Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
PWRBTN#	B12	Power button to bring system out of S5 (soft off), active on falling edge. Note: For proper detection, assert a pulse width of at least 16 ms.	I 3.3VSB	PU 10k 3.3VSB	
SYS_RESET#	B49	Reset button input. Active low input. Edge triggered. System will not be held in hardware reset while this input is kept low. Note: For proper detection, assert a pulse width of at least 16 ms.	I 3.3VSB	PU 10k 3.3VSB	
CB_RESET#	B50	Reset output from module to Carrier Board. Active low. Issued by module chipset and may result from a low SYS_RESET# input, a low PWR_OK input, a VCC_12V power input that falls below the minimum specification, a watchdog timeout, or may be initiated by the module software.	O 3.3V	PD 100k	
PWR_OK	B24	Power OK from main power supply. A high value indicates that the power is good.	I 3.3V		Set by resistor divider to accept 3.3V.
SUS_STAT#	B18	Indicates imminent suspend operation; used to notify LPC devices.	O 3.3VSB	PU 10k 3.3VSB	
SUS_S3#	A15	Indicates system is in Suspend to RAM state. Active-low output. An inverted copy of SUS_S3# on the carrier board (also known as "PS_ON") may be used to enable the non-standby power on a typical ATX power supply.	O 3.3VSB		
SUS_S4#	A18	Indicates system is in Suspend to Disk state. Active low output.	O 3.3VSB		Not supported
SUS_S5#	A24	Indicates system is in Soft Off state.	O 3.3VSB		
WAKE0#	B66	PCI Express wake up signal.	I 3.3VSB	PU 1k 3.3VSB	
WAKE1#	B67	General purpose wake up signal. May be used to implement wake-up on PS/2 keyboard or mouse activity.	I 3.3VSB	PU 10k 3.3VSB	
BATLOW#	A27	Battery low input. This signal may be driven low by external circuitry to signal that the system battery is low, or may be used to signal some other external power-management event.	I 3.3VSB	PU 10k 3.3VSB	
THRM#	B35	Input from off-module temp sensor indicating an over-temp situation.	I 3.3V	PU 10k 3.3V	
THERMTRIP#	A35	Active low output indicating that the CPU has entered thermal shutdown.	O 3.3V	PU 10k 3.3V	
SMB_CK	B13	System Management Bus bidirectional clock line.	I/O 3.3VSB	PU 2k2 3.3VSB	
SMB_DAT#	B14	System Management Bus bidirectional data line.	I/O OD 3.3VSB	PU 2k2 3.3VSB	
SMB_ALERT#	B15	System Management Bus Alert – active low input can be used to generate an SMI# (System Management Interrupt) or to wake the system.	I 3.3VSB		Revisions A.x and B.x have 10k pull-up
LID#	A103	Lid button. Used by the ACPI operating system for a LID switch. Note: For proper detection, assert a pulse width of at least 16 ms.	I OD 3.3V	PU 10k 3.3VSB	
SLEEP#	B103	Sleep button. Used by the ACPI operating system to bring the system to sleep state or to wake it up again. Note: For proper detection, assert a pulse width of at least 16 ms.	I OD 3.3V	PU 10k 3.3VSB	

Copyright © 2015 congatec GmbH

Table 31 General Purpose Serial Interface Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
SER0_TX	A98	General purpose serial port transmitter	O 3.3V		
SER1_TX	A101	General purpose serial port transmitter	O 3.3V		
SER0_RX	A99	General purpose serial port receiver	I 3.3V	PU 50k 3.3V	
SER1_RX	A102	General purpose serial port receiver	I 3.3V	PU 50k 3.3V	

Table 32 Module Type Definition Signal Description

Signal	Pin #	Description	I/O	Comment
TYPE0# TYPE1# TYPE2#	C54 C57 D57	The TYPE pins indicate to the Carrier Board the Pin-out Type that is implemented on the module. The pins are tied on the module to either ground (GND) or are no-connects (NC). For Pinout Type 1, these pins are don't care (X). TYPE2# / TYPE1# / TYPE0# / X / X / X / Pinout Type 1 NC / NC / NC / Pinout Type 2 NC / NC / GND / Pinout Type 3 (no IDE) NC / GND / NC / Pinout Type 4 (no PCI) NC / GND / GND / Pinout Type 5 (no IDE, no PCI) GND / NC / NC / Pinout Type 6 (no IDE, no PCI) The Carrier Board should implement combinatorial logic that monitors the module TYPE pins and keeps power off (e.g deactivates the ATX_ON signal for an ATX power supply) if an incompatible module pin-out type is detected. The Carrier Board logic may also implement a fault indicator such as an LED.	PDS	TYPE[0:2]# signals are available on all modules following the Type 2-6 Pinout standard. The conga-TC97 is based on the COM Express Type 6 pinout therefore the pins 0 and 1 are not connected and pin 2 is connected to GND.
TYPE10#	A97	Dual use pin. Indicates to the carrier board that a Type 10 module is installed. Indicates to the carrier that a Rev. 1.0/2.0 module is installed. TYPE10# NC – Pinout R2.0 PD – Pinout Type 10 pull down to ground with 4.7k resistor 12V – Pinout R1.0 This pin is reclaimed from VCC_12V pool. In R1.0 modules this pin will connect to other VCC_12V pins. In R2.0 this pin is defined as a no-connect for Types 1-6. A carrier can detect a R1.0 module by the presence of 12V on this pin. R2.0 module Types 1-6 will no-connect this pin. Type 10 modules shall pull this pin to ground through a 4.7k resistor.	PDS	Not connected to indicate "Pinout R2.0".

8.2 Boot Strap Signals

Table 34 Boot Strap Signal Descriptions

Signal	Pin #	Description of Boot Strap Signal	I/O	PU/PD	Comment
AC/HDA_SDOUT	A33	High Definition Audio Serial Data Out: This signal is the serial TDM data output to the codec(s). This serial output is double-pumped for a bit rate of 48 Mb/s for High Definition Audio.	O 3.3VSB	PU 1K 3.3VSB	AC/HDA_SDOUT is a boot strap signal (see caution statement below)
SPKR	B32	Output for audio enunciator, the "speaker" in PC-AT systems	O 3.3V		SPKR is a boot strap signal (see caution statement below)
DDI1_CTRLDATA_AUX- DP1_AUX- HDMI_CTRLDATA	D16	Multiplexed with DP1_AUX- and HDMI1_CTRLDATA. DP AUX- function if DDI1_DDC_AUX_SEL is no connect. HDMI/DVI I2C CTRLDATA if DDI1_DDC_AUX_SEL is pulled high.	 I/O PCIE I/O OD 3.3V	PU100k 3.3V	DDI1_CTRLDATA_AUX- is a boot strap signal (see not below).
DDI2_CTRLDATA_AUX- DP2_AUX- HDM2_CTRLDATA	C33	Multiplexed with DP2_AUX- and HDMI2_CTRLDATA. DP AUX- function if DDI2_DDC_AUX_SEL is no connect. HDMI/DVI I2C CTRLDATA if DDI2_DDC_AUX_SEL is pulled high.	 I/O PCIE I/O OD 3.3V	PU100k 3.3V	DDI2_CTRLDATA_AUX- is a boot strap signal (see not below).

Caution

1. *The signals listed in the table above are used as chipset configuration straps during system reset. In this condition (during reset), they are inputs that are pulled to the correct state by either COM Express™ internally implemented resistors or chipset internally implemented resistors that are located on the module.*

2. *No external DC loads or external pull-up or pull-down resistors should change the configuration of the signals listed in the above table. External resistors may override the internal strap states and cause the COM Express™ module to malfunction and/or cause irreparable damage to the module.*

9 System Resources

9.1 I/O Address Assignment

The I/O address assignment of the conga-TC97 module is functionally identical with a standard PC/AT.

Note

The BIOS assigns PCI and PCI Express I/O resources from FFF0h downwards. Non PnP/PCI/PCI Express compliant devices must not consume I/O resources in that area.

9.1.1 LPC Bus

On the conga-TC97, the PCI Express Bus acts as the subtractive decoding agent. All I/O cycles that are not positively decoded are forwarded to the internal PCI Bus not the LPC Bus. Only specified I/O ranges are forwarded to the LPC Bus. In the congatec Embedded BIOS, the following I/O address ranges are sent to the LPC Bus:

2Eh – 2Fh

4Eh – 4Fh

60h, 64h

A00h – AFFh

C00h – CFFh (always used internally)

Parts of these ranges are not available if a Super I/O is used on the carrier board. If a Super I/O is not implemented on the carrier board, then these ranges are available for customer use. If you require additional LPC Bus resources other than those mentioned above, or more information about this subject, contact congatec technical support for assistance.

9.2 PCI Configuration Space Map

Table 35 PCI Configuration Space Map

Bus Number (hex)	Device Number (hex)	Function Number (hex)	Description
00h	00h	00h	Host Bridge
00h	02h	00h	Graphics
00h	03h	00h	Intel High Definition Audio controller
00h	14h	00h	XHCI Host Controller
00h(Note1)	16h	00h	Management Engine (ME) Interface 1
00h(Note1)	16h	01h	Intel ME Interface 2
00h(Note1)	16h	02h	ME IDE Redirection (IDE-R) Interface
00h(Note1)	16h	03h	ME KT (Remote Keyboard and Text)
00h	19h	00h	Onboard Gigabit LAN Controller
00h (Note2)	1Ch	00h	PCI Express Root Port 0
00h (Note2)	1Ch	01h	PCI Express Root Port 1
00h (Note2)	1Ch	02h	PCI Express Root Port 2
00h (Note2)	1Ch	03h	PCI Express Root Port 3
00h	1Dh	00h	EHCI Host Controller
00h	1Fh	00h	PCI to LPC Bridge
00h	1Fh	02h	Serial ATA Controller
00h	1Fh	03h	SMBus Host Controller
00h	1Fh	06h	Thermal Subsystem
01h (Note3)	00h	00h	PCI Express Port 0
02h (Note3)	00h	00h	PCI Express Port 1
03h (Note3)	00h	00h	PCI Express Port 2
04h (Note3)	00h	00h	PCI Express Port 3

Note

3. *In the standard configuration, the Intel Management Engine (ME) related devices are partly present or not present at all.*

4. *The PCI Express Ports are visible only if a device is attached behind them to the PCI Express Slot on the carrier board.*

5. *The table represents a case when a single function PCI/PCIe device is connected to all possible slots on the carrier board. The given bus numbers will change based on actual hardware configuration.*

G		22															
H		23				x											

Note

[1] *These interrupt lines are virtual (message based).*

[2] *Interrupt used by single function PCI Express devices (INTA).*

[3] *Interrupt used by multifunction PCI Express devices (INTB).*

[4] *Interrupt used by multifunction PCI Express devices (INTC).*

[5] *Interrupt used by multifunction PCI Express devices (INTD).*

9.4 I²C Bus

There are no onboard resources connected to the I²C bus. Address 16h is reserved for congatec Battery Management solutions.

9.5 SM Bus

System Management (SM) bus signals are connected to the Intel® 9 Series PCH-LP and the SM bus is not intended to be used by off-board non-system management devices. For more information about this subject, contact congatec technical support.

10 BIOS Setup Description

The following section describes the BIOS setup program. The BIOS setup program can be used to view and change the BIOS settings for the module. Only experienced users should change the default BIOS settings.

10.1 Entering the BIOS Setup Program.

The BIOS setup program can be accessed by pressing the <DEL> or <F2> key during POST.

10.1.1 Boot Selection Popup

Press the <F11> key during POST to access the Boot Selection Popup menu. A selection menu displays immediately after POST, allowing the operator to select either the boot device that should be used or an option to enter the BIOS setup program.

10.2 Setup Menu and Navigation

The congatec BIOS setup screen is composed of the menu bar, left frame and right frame. The menu bar is shown below:

Main	Advanced	Chipset	Security	Boot	Save & Exit

The left frame displays all the options that can be configured in the selected menu. Grayed-out options cannot be configured. Only the blue options can be configured. When an option is selected, it is highlighted in white.

The right frame displays the key legend. Above the key legend is an area reserved for text messages. These text messages explain the options and the possible impacts when changing the selected option in the left frame.

Note

Entries in the option column that are displayed in bold indicate BIOS default values.

Copyright © 2015 congatec GmbH

The setup program uses a key-based navigation system. Most of the keys can be used at any time while in setup. The table below explains the supported keys:

Key	Description
← → Left/Right	Select a setup menu (e.g. Main, Boot, Exit).
↑ ↓ Up/Down	Select a setup item or sub menu.
+ - Plus/Minus	Change the field value of a particular setup item.
Tab	Select setup fields (e.g. in date and time).
F1	Display General Help screen.
F2	Load previous settings.
F9	Load optimal default settings.
F10	Save changes and exit setup.
ESC	Discard changes and exit setup.
ENTER	Display options of a particular setup item or enter submenu.

10.3 Main Setup Screen

When you first enter the BIOS setup, you will enter the main setup screen. The main setup screen reports BIOS, processor, memory and board information and is for configuring the system date and time. You can always return to the main setup screen by selecting the 'Main' tab.

Feature	Options	Description
Main BIOS Version	No option	Displays the main BIOS version.
OEM BIOS Version	No option	Displays the additional OEM BIOS version.
Build Date	No option	Displays the date the BIOS was built.
Product Revision	No option	Displays the hardware revision of the board.
Serial Number	No option	Displays the serial number of the board.
BC Firmware Revision	No option	Displays the firmware revision of the congatec board controller.
MAC Address	No option	Displays the MAC address of the onboard i218 Ethernet controller.
Boot Counter	No option	Displays the number of boot-ups. (max. 16777215).
Running Time	No option	Displays the time the board is running [in hours max. 65535].
► Platform Information	Submenu	Opens the platform information submenu.
System Date	Day of week, month/ day/year	Specifies the current system date **Note:** *The date is in month/day/year format.*
System Time	Hour:Minute:Second	Specifies the current system time. **Note:** *The time is in 24 hour format.*

Copyright © 2015 congatec GmbH

10.3.1 Platform Information Submenu

The platform information submenu offers additional hardware and software information.

Feature	Options	Description
Processor Information	No option	Subtitle.
Processor Type	No option	Displays the processor ID string. The 'Processor Type' text is not displayed.
Codename	No option	Displays the processor codename
Processor Speed	No option	Displays the processor speed.
Processor Signature	No option	Displays the processor signature.
Stepping	No option	Displays the processor stepping.
Processor Cores	No option	Displays the number of processor cores.
Microcode Revision	No option	Displays the processor microcode revision .
IGD HW Version	No option	Displays the version of the graphics controller.
IGD VBIOS Version	No option	Displays the video BIOS version.
Total Memory	No option	Displays the total amount of installed memory.
PCH Information	No option	Subtitle.
Codename	No option	Displays the codename of the platform controller hub (PCH).
PCH SKU	No option	Displays the SKU name of the PCH.
Stepping	No option	Displays the PCH stepping
ME FW Version	No option	Displays the ME FW version when available
ME Firmware SKU	No option	Displays the ME Firmware SKU when available

Copyright © 2015 congatec GmbH

10.4 Advanced Setup

Select the advanced tab from the setup menu to enter the advanced BIOS setup screen. The menu is used for setting advanced features and only features described within this user's guide are listed.

Main	Advanced	Chipset	Boot	Security	Save & Exit
	Graphics				
	Watchdog				
	Hardware Health Monitoring				
	Module Serial Ports				
	CPU				
	Trusted Computing				
	RTC Wake				
	ACPI				
	PCH-FW [1]				
	AMT [1]				
	Acoustic Management				
	SMART Settings				
	Super IO				
	Serial Port Console Redirection				
	SATA				
	PCI & PCI Express				
	UEFI Network Stack				
	CSM & Option ROM Control				
	USB				
	PC Speaker				
	GPIO Configuration				
	Diagnostics Settings				
	Intel® Ethernet Connection I218-LM				
	Intel® Rapid Storage Technology [2]				

Note

1. *Not displayed if disabled in the BIOS.*

2. *Displays only if the SATA Mode Selection feature in SATA submenu is set to "RAID" and the Storage Option ROM Launch Policy feature in the CSM & Option ROM Control submenu is set to "UEFI ROM Only".*

Copyright © 2015 congatec GmbH

10.4.1 Graphics Submenu

Feature	Options	Description
Primary Graphics Device	**Auto** IGD PCI/PCIe	Select the primary graphics adapter used during boot up: 'Auto' - BIOS selects it automatically. 'IGD' - Internal Graphics Device (IGD) located in chipset. 'PCI/PCIe' - PCI/PCIe graphics card attached to some other (not PEG) PCI/PCIe port.
Internal Graphics Device	**Auto** Disabled Enabled	Configure Internal Graphics Device (IGD).
IGD Pre-Allocated Graphics Memory	**32M,** 64M, 96M, 128M, 160M, 192M, 224M, 256M, 288M, 320M, 352M, 384M, 416M, 448M, 480M, 512M, 1024M, 2016M	Select amount of pre-allocated / fixed graphics memory used by the IGD.
IGD Total Graphics Memory	128MB **256MB** MAX	Select amount of total graphics memory that may be used by the IGD. The graphics driver dynamically allocates memory that is above the fixed memory according to DVMT 5.0 specification. 'MAX' - Uses as much graphics memory as possible. The actual memory allocation depends on total system memory installed and the operating system in use (see DVMT 5.0 specification).
Primary IGD Boot Display Device	**Auto** LFP EFP EFP2	Select the primary IGD display device(s) used for boot up: 'LFP' - Uses a LVDS panel connected to the integrated LVDS port. 'EFPx' - Uses a HDMI/DVI or DisplayPort device connected to the DDI1 and DDI2. **Note:** EFP selections are only valid when at least one DDI is enabled. The first enabled DDI is assigned to EFP. Therefore, EFP and DDI numbering do not necessarily match.
Secondary IGD Boot Display Device	**Disabled** LFP EFP EFP2	Select the secondary IGD display device(s) used for boot up.
Active LFP Configuration	No Local Flat Panel **Integrated LVDS** eDP	Select the active LFP configuration.
Always Try Auto Panel Detect	**No** Yes	If set to 'Yes', the BIOS will use the EDID™ data set in an external EEPROM to configure the LFP. In case it cannot be found, the data set selected under 'Local Flat Panel Type' is used.

Copyright © 2015 congatec GmbH

Feature	Options	Description
Local Flat Panel Type	**Auto** VGA 640x480 1x18 (002h) VGA 640x480 1x18 (013h) WVGA 800x480 1x18 (01Fh) WVGA 800x480 1x24 (01Bh) SVGA 800x600 1x18 (01Ah) XGA 1024x768 1x18 (006h) XGA 1024x768 2x18 (007h) XGA 1024x768 1x24 (008h) XGA 1024x768 2x24 (012h) WXGA 1280x800 1x18 (01Eh) WXGA 1280x768 1x24 (01Ch) SXGA 1280x1024 2x24 (00Ah) SXGA 1280x1024 2x24 (018h) UXGA 1600x1200 2x24 (00Ch) HD 1920x1080 2x24 (01Dh) WUXGA 1920x1200 2x18 (015h) WUXGA 1920x1200 2x24 (00Dh) Customized EDID™ 1 Customized EDID™ 2 Customized EDID™ 3	Select a predefined LFP type or choose 'Auto' to let the BIOS automatically detect and configure the attached LVDS panel. Auto detection is performed by reading an EDID™ data set via the video I²C bus. The number in brackets specifies the congatec internal number of the respective panel data set. **Note:** *Customized EDID™ utilizes an OEM defined EDID™ data set stored in the BIOS flash device.*
Backlight Inverter Type	None **PWM** I2C	Select the type of backlight inverter: 'PWM' - IGD PWM signal. 'I2C' - I2C backlight inverter device connected to the video I²C bus.
PWM Inverter Polarity	**Normal** Inverted	Set the PWM inverter polarity. **Note:** This feature is only visible if 'Backlight Inverter Type' is set to 'PWM'.
PWM Inverter Frequency (Hz)	**200** - 40000	Set the PWM inverter frequency in Hertz. **Note:** This feature is only visible if 'Backlight Inverter Type' is set to 'PWM'.
Backlight Setting	0%, 10%, 25%, 40%, 50%, 60%, 75%, 90%, **100%**	Select the backlight value in percentage of the maximum setting.
Force Backlight Enable	**No** Yes	If set to 'Yes', forces backlight enable signal active. **Note:** Use this feature if the operating system driver does not activate the backlight enable signal.
Inhibit Backlight	**No** Permanent Until End Of POST	Select whether the backlight enable signal should be activated when the panel is activated, remain inhibited until the end of BIOS POST, or remain inhibited permanently.
Backlight Delay	**No Delay** 100ms Delay 250ms Delay 500ms Delay 1s Delay	Set a delay to adjust the LVDS panel timings. The congatec board controller will add the delay to the backlight signal coming from the SoC according this setup node. **Note:** Please try this feature if your panel is flickering.
Invert Backlight Setting	**No** Yes	Allow to invert backlight control values if required for the actual I2C type backlight hardware controller.

Copyright © 2015 congatec GmbH

Feature	Options	Description
LVDS SSC	**Disabled** 0.5%, 1.0%, 1.5%, 2.0%, 2.5%	Select the LVDS spread-spectrum clock modulation depth. **Note:** This feature performs center spreading with a fixed modulation frequency of 32.9kHz.
Digital Display Interface 1 (DDI1)	**Auto Selection** Disabled Display Port HDMI/DVI	Select the output type of the DDI1.
Digital Display Interface 2 (DDI2)	**Auto Selection** Disabled Display Port HDMI/DVI	Select the output type of the DDI2.
Intel® GOP Driver	No option	**Note:** The Intel® (GOP) driver, output device and BIST enable features are only visible if GOP driver is configured to be used in the 'Video Option ROM Launch Policy' setup node.
Output Device	Options depend on detected display devices	Configure graphics output interface when using the UEFI GOP driver instead of the legacy video BIOS.
BIST Enable	**Disabled** Enabled	Enable or disable the Built-in Self-Test (BIST) on the integrated display panel.

10.4.2 Watchdog Submenu

Feature	Options	Description
POST Watchdog	**Disabled** 30sec, 1min, 2min, 5min, 10min, 30min	Select the timeout value for the POST watchdog. **Note:** The watchdog is only active during the system POST and provides a facility to prevent errors during boot up by performing a reset.
Stop Watchdog for User Interaction	No **Yes**	Select whether the POST watchdog should be stopped during the popup of the boot selection menu or while waiting for setup password insertion.
Runtime Watchdog	**Disabled** One-time Trigger Single Event Repeated Event	Select the operating mode of the runtime watchdog: 'One-time Trigger' - Disables watchdog after the first trigger. 'Single Event' - Executes every stage once before the watchdog is disabled. 'Repeated Event' - Executes the last stage repeatedly until reset. **Note:** This watchdog will be initialized just before the operating system starts booting.
Delay	**Disabled** 10sec, 30sec, 1min, 2min 5min, 10min, 30min	The runtime watchdog is delayed for the selected time. **Note:** Use this feature to ensure that the operating system has enough time to load.
Event 1	ACPI Event **Reset** Power Button	Select the type of event that will be generated when timeout 1 is reached.

Copyright © 2015 congatec GmbH

Feature	Options	Description
Event 2	**Disabled** ACPI Event Reset Power Button	Select the type of event that will be generated when timeout 2 is reached.
Event 3	**Disabled** ACPI Event Reset Power Button	Select the type of event that will be generated when timeout 3 is reached.
Timeout 1	1sec, 2sec, 5sec, 10sec, **30sec**, 1min, 2min, 5min, 10min, 30min	Select the timeout value for the first stage watchdog event.
Timeout 2	Same as 'Timeout 1'	Same as 'Timeout 1'.
Timeout 3	Same as 'Timeout 1'	Same as 'Timeout 2'.
Watchdog ACPI Event	**Shutdown** Restart	Select the operating system event that is initiated by the watchdog ACPI event. This feature perform a critical but orderly operating system shutdown or restart.

Note

In ACPI mode, it is not possible for a "Watchdog ACPI Event" handler to directly restart or shutdown the operating system. For this reason, the congatec BIOS will for shutdown, execute an over-temperature notification which causes the operating system to shut down in an orderly fashion. For restart, the congatec BIOS will report an ACPI fatal error to the operating system.

10.4.3 Hardware Health Monitoring Submenu

Feature	Options	Description
CPU Temperature	No option	Displays the CPU temperature in °C.
Board Temperature	No option	Displays the board temperature in °C.
12V Standard	**No option**	Displays the actual 12V standard voltage.
5V Standby	No option	Displays the actual 5V standby voltage.
Input Current (12V Standard)	No option	Displays the actual input current of 12V standard power plane.
CPU Fan Speed	No option	Displays the CPU fan speed in RPM.
Fan PWM Frequency Mode	Low Frequency **High Frequency**	Select the fan PWM base frequency mode: Low Frequency 11.0 to 88.2Hz. High Frequency 1k to 63kHz.
Fan PWM Frequency	11.0 Hz, 14.7 Hz, 22.1 Hz, 29.4 Hz, **35.3 Hz,** 44.1 Hz 58.8 Hz, 88.2 Hz	Select fan PWM base frequency. **Note:** Only visible in low frequency mode.

Copyright © 2015 congatec GmbH

Feature	Options	Description
Fan PWM Frequency (kHz)	1 - 63	Select fan PWM base frequency (1kHz-63kHz). Default: 31 **Note:** This feature is only visible in high frequency mode.
Default Fan Speed	0%, 10%, 25%, 40%, 50%, 60%, 75%, 90%, **100%**	Select the percentage of the maximum supported fan speed to use when the automatic fan speed control feature is disabled.
Automatic Fan Speed Control	Disabled **Enabled**	Enable or disable automatic fan speed control.
Fan Control Temperature	**CPU Temperature** Board Temperature	Choose the temperature sensor used for automatic fan speed control.
Lower Temperature Limit	10 C, 20 C, 30 C, 40 C, **50 C**, 60 C, 70 C, 80 C, 90 C	Set the temperature which defines the lower limit of the control range.
Upper Temperature Limit	20 C, 30 C, 40 C, 50 C, 60 C, 70 C, **80 C**, 90 C, 100 C	Set the temperature which defines the upper limit of the control range.
Minimum Fan Speed	Fan Off, 10%, 15%, 20%, 25%, 30%, 35%, **40%**, 45%, 50%, 55%, 60%, 65%, 70%, 75%, 80%, 85%, 90%, 95%	Choose the fan speed to be set if the temperature is below the lower temperature limit.
Mid Range Bottom Fan Speed	Fan Off, 10%, 15%, 20%, 25%, 30%, 35%, 40%, 45%, 50%, 55%, **60%**, 65%, 70%, 75%, 80%, 85%, 90%, 95%	Choose the fan speed to be set if the temperature is within the lower area of the control range.
Mid Range Top Fan Speed	Fan Off, 10%, 15%, 20%, 25%, 30%, 35%, 40%, 45%, 50%, 55%, 60%, 65%, 70%, 75%, **80%**, 85%, 90%, 95%	Choose the fan speed to be set if the temperature is within the upper area of the control range.
Maximum Fan Speed	10%, 15%, 20%, 25%, 30%, 35%, 40%, 45%, 50%, 55%, 60%, 65%, 70%, 75%, 80%, 85%, 90%, 95%, **100%**	Choose the fan speed to be set if the temperature exceeds the upper temperature limit.

Copyright © 2015 congatec GmbH

10.4.4 Module Serial Ports Submenu

Feature	Options	Description
Serial Port 0	**Disabled** Enabled	Enable or disable module's serial port 0.
I/O Base Address	3F8h, 2F8h, 220h, 228h, 238h, 2E8h, 338h, **3E8h**	Set serial port base address.
Interrupt	None IRQ3, IRQ4, IRQ5, IRQ6, **IRQ10,** IRQ11, IRQ14, IRQ15	Set serial port interrupt.
PNP ID	None PNP0501 **CGT0501**	Set serial port ACPI ID.
Baudrate	**2400,** 4800, 9600, 19200, 38400, 57600, 115200	Set serial port initial baudrate.
Serial Port 1	**Disabled** Enabled	Enable or disable module serial port 1.
I/O Base Address	3F8h, 2F8h, 220h, 228h, 238h, **2E8h,** 338h, 3E8h	Set serial port base address.
Interrupt	None IRQ3, IRQ4, IRQ5, IRQ6, IRQ10, **IRQ11,** IRQ14, IRQ15	Set serial port interrupt.
PNP ID	None PNP0501 CGT0501 **CGT0502**	Set serial port ACPI ID.
Baudrate	**2400,** 4800, 9600, 19200 38400, 57600, 115200	Set serial port initial baudrate.

10.4.5 CPU Submenu

Feature	Options	Description
Processor Type	No option	Displays the processor ID string. The "Processor Type" is not displayed.
CPU Signature	No option	Displays the CPU signature.
Microcode Patch	No option	Displays the revision of the microcode patch.
Max CPU Speed	No option	Displays the maximum CPU speed.
Min CPU Speed	No option	Displays the minimum CPU speed.
CPU Speed	No option	Displays the current CPU speed.

Copyright © 2015 congatec GmbH

Feature	Options	Description
Processor Cores	No option	Displays the number of the processor cores.
Intel HT Technology	No option	Displays whether the Intel® HT technology is supported.
Intel VT-x Technology	No option	Displays whether the Intel® VT-x technology is supported.
Intel SMX Technology	No option	Displays whether the Intel® SMX technology is supported.
64-bit	No option	Displays whether 64-bit is supported.
EIST Technology	No option	Displays whether the Enhanced Intel SpeedStep Technology (EIST) is supported.
CPU C3 State	No option	Displays whether the CPU C3 state is supported.
CPU C6 State	No option	Displays whether the CPU C6 state is supported.
CPU C7 State	No option	Displays whether the CPU C7 state is supported.
L1 Data Cache	No option	Displays the size of the L1 data cache.
L1 Code Cache	No option	Displays the size of the L1 code cache.
L2 Cache	No option	Displays the size of the L2 cache.
L3 Cache	No option	Displays the size of the L3 cache.
L4 Cache	No option	Displays the size of the L4 cache.
Hyper-Threading	Disabled **Enabled**	Enable or disable Hyper-Threading technology.
Active Processor Cores	**All** 1, 2, 3	Enable the required number of cores.
Overclocking Lock	**Disabled** Enabled	FLEX_RATIO(194) MSR.
Limit CPUID Maximum	**Disabled** Enabled	If set to 'Enabled', the processor limits the maximum CPUID input value to 03h when queried, even if the processor supports a higher CPUID input value. If set to 'Disabled', the processor returns the actual maximum CPUID input value of the processor when queried. **Note:** Limiting the CPUID input value might be required for older operating systems that cannot handle the extra CPUID information returned when using the full CPUID input value.
Execute Disable Bit	Disabled **Enabled**	If set to 'Enabled', this feature helps to prevent certain classes of malicious buffer overflow attacks. **Note:** Please ensure that your operating system supports this feature if you want to use it.
Intel Virtualization Technology	Disabled **Enabled**	Enable or disable support for the Intel virtualization technology.
Hardware Prefetcher	Disabled **Enabled**	Enable or disable the Mid Level Cache (L2) streamer prefetcher.
Adjacent Cache Line Prefetch	Disabled **Enabled**	Enable or disable the Mid Level Cache (L2) prefetching of adjacent cache lines.
CPU AES	Disabled **Enabled**	Enable or disable CPU Advanced Encryption Standard (AES) instructions.

Copyright © 2015 congatec GmbH

Feature	Options	Description
Boot Performance Mode	Max Non-Turbo Performance Max Battery **Turbo Performance**	Select the performance state the BIOS will set before operating system handoff.
EIST	Disabled **Enabled**	Enable or disable Enhanced Intel® SpeedStep Technology (EIST).
Turbo Mode	Disabled **Enabled**	Enable or disable Turbo Mode.
Energy Performance	**Performance** Balanced Perform. Balanced Energy Energy Efficient	Select energy preference setting.
Package Power Limit Lock	Disabled **Enabled**	If enabled, PACKAGE_POWER_LIMIT MSR is locked and a reset will be required to unlock the register.
Platform Power Limit Lock	Disabled **Enabled**	If enabled, PLATFORM_POWER_LIMIT MSR is locked and a reset will be required to unlock the register.
CPU Power Limit3	**0** - 255	Select CPU Power Limit3 value
CPU Power Limit3 Time	**0** - 255	Select time window during which the Power Limit3 is maintained.
CPU Power Limit3 Duty Cycle	**0** - 100	Select the duty cycle in percentage the CPU is required to maintain over the configured Power Limit 3 time windows..
DDR Power Limit1	**0** - 255	Select DDR Power Limit1 value
DDR Power Limit1 Time	**0** - 255	Select time window in which the DDR Power Limit1 is maintained.
DDR Power Limit2	**0** - 255	Select DDR Power Limit2 value
1-Core Ratio Limit	**0** - 255	Select limit for 1 active core. 0 means using the factory-configured value.
2-Core Ratio Limit	**0** - 255	Select limit for 2 active cores. 0 means using the factory-configured value.
3-Core Ratio Limit	**0** - 255	Select limit for 3 active cores. 0 means using the factory-configured value.
4-Core Ratio Limit	**0** - 255	Select limit for 4 active cores. 0 means using the factory-configured value.
VR Current Value Lock	Disabled **Enabled**	Enable this feature to lock the VR current value from further writes until reset.
VR Current Value	**0** - 8191	Select the voltage regulator current limit. '0' means automatic.
CPU C States	**Disabled** Enabled	Enable or disable CPU C states.
Enhanced C1 State	Disabled **Enabled**	Enable or disable enhanced C1 state.
CPU C3 Report	Disabled **Enabled**	Enable or disable CPU C3 report to operating system.
CPU C6 Report	Disabled **Enabled**	Enable or disable CPU C6 report to operating system.

Copyright © 2015 congatec GmbH

Feature	Options	Description
C6 Latency	**Short** Long	Select latency for C6.
CPU C7 Report	Disabled CPU C7 **CPU C7s**	Enable or disable CPU C7 report to operating system.
C7 Latency	Short **Long**	Select latency for C7.
CPU C8 Report	Disabled **Enabled**	Enable or disable CPU C8 report to operating system. **Note:** This feature is not displayed/supported on all processors types.
CPU C9 Report	Disabled **Enabled**	Enable or disable CPU C9 report to operating system. **Note:** This feature is not displayed/supported on all processors types.
CPU C10 Report	Disabled **Enabled**	Enable or disable CPU C10 report to operating system. **Note:** This feature is not displayed/supported on all processors types.
C9/C10 Voltage Override	**Disabled** 0.7V, 0.8V, 0.9V, 1.0V	Enable or disable C9/C10 override for BDW C9/C10 hard hang issue. **Note:** If this feature is enabled, it ensures that the Vccin voltage reduction actions for C9/C10 are maintained to the selected voltage level (instead of default of 0V) on BDW U and Y SKUs.
C1 State Auto Demotion	Disabled **Enabled**	If this feature is enabled, the processor will conditionally demote C3/C6/C7 requests to C1 based on uncore auto-demote information.
C3 State Auto Demotion	Disabled **Enabled**	If this feature is enabled, the processor will conditionally demote C6/C7 requests to C3 based on uncore auto-demote information.
Package C State Demotion	**Disabled** Enabled	Enable or disable package C state demotion.
C1 State Auto Undemotion	Disabled **Enabled**	Enable or disable un-demotion from demoted C1.
C3 State Auto Undemotion	Disabled **Enabled**	Enable or disable un-demotion from demoted C3.
Package C State Undemotion	**Disabled** Enabled	Enable or disable package C state un-demotion.
C State Pre-Wake	Disabled **Enabled**	Enable or disable C state pre-wake feature.
CFG Lock	Disabled **Enabled**	Enable or disable MSR 0xE2[15], CFG lock bit.
Package C State Limit	C0/C1, C2, C3, **C6,** C7, C7s, C8, C9, C10, AUTO	Select package C state limit
Lake Tiny Feature	**Disabled** Enabled	Enable or disable lake tiny feature for C state configuration.
ACPI CTDP BIOS	**Disabled** Enabled	Enable or disable ACPI CTDP BIOS support.

Copyright © 2015 congatec GmbH

Feature	Options	Description
Configurable TDP Level	**TDP NOMINAL** TDP DOWN TDP UP Disabled	Select configurable TDP level base.
Config TDP Lock	**Disabled** Enabled	Enable this feature to lock the config TDP control register.
TCC Activation Offset	**0** - 50	Set the offset from the Intel® factory Thermal Control Circuit (TCC) activation temperature. For example: If the factory TCC activation temperature is 100C, enter 10 to activate TCC at 90C. **Note:** When active, the TCC lowers the CPU core and graphics core frequency, voltage or both.
Intel TXT(LT) Support	**Disabled** Enabled	Enable or disable Intel® TXT(LT) support.
IOUT Offset Sign	**0** 1	'0' - Positive offset. '1' - Negative offset.
IOUT Offset	**0** - 625	Select VR IOUT offset
IOUT Slope	**0** - 1023	Select VR IOUT slope.
Debug Interface	**Disabled** Enabled	Enable or disable CPU debug interface.
Debug Interface Lock	**Disabled** Enabled	Enable to lock CPU debug interface setting.

10.4.6 Trusted Computing Submenu

Feature	Options	Description
Security Device Support	Disabled **Enabled**	Enable or disable BIOS support for the security device. **Note:** If enabled, the operating system will not display the security device. The TCG EFI protocol and INT1A interface are unavailable.
Device Select	TPM 1.2 TPM 2.0 **Auto**	'TPM 1.2' - Restricts support to TPM 1.2 devices. 'TPM 2.0' - Restricts support to TPM 2.0 devices. 'Auto' - Default set to TPM 2.0 but if no such device is found TPM 1.2 devices are enumerated.
TPM State	**Disabled** Enabled	Enable or disable TPM chip. **Note:** The system may restart several times during POST to acquire the target state.
Pending operation	**None** Enable Take Ownership Disable Take Ownership TPM Clear	Select TPM chip operation. **Note:** The system may restart several times during POST to perform the selected operation.

Copyright © 2015 congatec GmbH

10.4.7 RTC Wake Submenu

Feature	Options	Description
Wake System At Fixed Time	**Disabled** Wake from S5 only Wake from S4 and S5 Wake from S3, S4 and S5	Set system wake mode on alarm event. When enabled, system will wake from the specified Sx states on the hr::min::sec as specified.
Wake up hour		Specify the wake up hour. For example: Enter "3" for 3am and "15" for 3pm.
Wake up minute		Specify the wake up minute.
Wake up second		Specify the wake up second.

10.4.8 ACPI Submenu

Feature	Options	Description
Hibernation Support	Disabled **Enabled**	Enable or disable the system's ability to hibernate (OS S4 sleep state). **Note:** If you want to use this feature, please ensure that the operating system supports it.
ACPI Sleep State	Suspend Disabled S1 (CPU Stop Clock) **S3 (Suspend to RAM)** Both S1 and S3 available for OS to choose from	Select the state for ACPI system sleep/suspend.
Lock Legacy Resources	**Disabled** Enabled	Enable this feature to lock legacy resources.
S3 Video Repost	**Disabled** Enabled	Enable or disable video BIOS re-post on S3 resume. **Note:** Please check if your operating system requires this feature to be enabled.
ACPI Low Power S0 Idle	**Disabled** Enabled	Enable or disable ACPI low power S0 idle support.
Native PCI Express Support	Disabled **Enabled**	Enable or disable native operating system PCIe support.
Native ASPM	**Disabled** Enabled	'Enabled' - The operating system controls the ASPM support of the PCIe device. 'Disabled' - The BIOS controls the ASPM support of the PCIe device.
ACPI Debug	**Disabled** Enabled	Enable this feature to open a memory buffer for storing debug strings. **Note:** Use method ADBG to write strings to buffer.
ACPI 5.0 CPPC Support	**Disabled** Enabled	Enable this feature to expose Collaborative Processor Performance Control (CPPC) interfaces to the operating system. Disable this feature to expose legacy (non-CPPC) processor interfaces to the operating system.
ACPI 5.0 CPPC Platform SCI	**Disabled** Enabled	Select ACPI 5.0 platform generation of SCI on CPPC command completion: If enabled, the platform generates GPE/SCI. If disabled, the platform does not generate GPE/SCI and the operating system polls for command completion.

Copyright © 2015 congatec GmbH

Feature	Options	Description
Automatic Critical Trip Point	**Disabled** Enabled	Enable this feature to set the critical trip point (temperature threshold) to the recommended value at which the ACPI aware operating system performs a critical shutdown automatically. Disable this feature to configure the critical trip point manually.
Critical Trip Point Value	71 °C, 79 °C, 87 °C, 95 °C, 103 °C, **106 °C,** 111 °C, 119 °C, 127 °C	Select the temperature threshold at which the ACPI aware operating system performs a critical shutdown.
Lid Support	**Disabled** Enabled	If enabled, the COM Express LID# signal acts as ACPI lid.
Sleep Button Support	**Disabled** Enabled	If enabled, the COM Express SLEEP# signal acts as ACPI sleep button.

10.4.9 PCH-FW Submenu

Feature	Options	Description
ME FW Version	No option	Displays ME FW Version.
ME Firmware Mode	No option	Displays ME Firmware Mode.
ME Firmware Type	No option	Displays ME Firmware Type.
ME Firmware SKU	No option	Displays ME Firmware SKU.
PTT Capability / State	No option	Displays PTT Capability / State.
NFC Support	No option	Displays NFC Support.
MDES BIOS Status Code	**Disabled** Enabled	Enable or disable MDES BIOS status code.
ME Unconfig on RTC Clear State	Disabled **Enabled**	Enable or disable ME firmware un-configuration on RTC clear state.
fTPM Switch Selection	**GPDMA Work-Around** MSFT QFE Solution	Select the desired fTPM solution.
TPM Device Selection	**dTPM 1.2** PTT	Select TPM device: 'PTT' - Enables PTT and disables dTPM in SkuMgr. 'dTPM 1.2' - Enables dTPM 1.2 and disables PTT in SkuMgr. **Warning:** If you enable PTT, dTPM will be disabled and all data saved on it will be lost. Likewise, if you enable dTPM, PTT will be disabled and all data saved on it will be lost.
►Firmware Update Configuration	Submenu	Opens the submenu to configure Management Engine technology parameters.
ME FW Image Re-Flash	**Disabled** Enabled	Enable or disable ME FW image re-flash function.

Copyright © 2015 congatec GmbH

10.4.10 AMT Submenu

Feature	Options	Description
Intel AMT	Disabled **Enabled**	Enable or disable Intel® Active Management Technology (AMT) BIOS extension. **Note:** iAMT H/W is always enabled/just controls the BIOS extension execution. If you enabled this feature, please ensure the additional firmware is in the SPI device.
BIOS Hotkey Pressed	**Disabled** Enabled	OEMFlag Bit 1: Enable or disable BIOS hotkey press.
MEBx Selection Screen	**Disabled** Enabled	OEMFlag Bit 2: Enable or disable MEBx selection screen.
Hide Un-Configure ME Confirmation Prompt	**Disabled** Enabled	OEMFlag Bit 6: Hide un-configure ME without password confirmation prompt.
MEBx Debug Message Output	**Disabled** Enabled	OEMFlag Bit 14: Enable or disable MEBx debug message output.
Un-Configure ME	**Disabled** Enabled	OEMFlag Bit 15: Un-configure ME without password.
AMT Wait Timer	**0** - 65535	Set timer to wait before sending ASF_GET_BOOT_OPTIONS.
Disable ME	**Disabled** Enabled	Enable or disable 'Disable ME'.
ASF	Disabled **Enabled**	Enable or disable Alert Specification Format (ASF).
Activate Remote Assistance Process	**Disabled** Enabled	Enable or disable trigger CIRA boot.
USB Configure	Disabled **Enabled**	Enable or disable USB configure function.
PET Progress	Disabled **Enabled**	Enable PET Events progress to receive PET events.
AMT CIRA Timeout	**0** - 255	Select OEM defined timeout for MPS connection to establish: '0' - Default timeout value of 60 seconds. '255' - MEBX waits until the connection succeeds.
WatchDog	**Disabled** Enabled	Enable or disable watchdog timer
OS Timer	**0** - 65535	Set the operating system watchdog timer.
BIOS Timer	**0** - 65535	Set the BIOS watchdog timer.

Note

The AMT submenu is only displayed if the feature is enabled.

Copyright © 2015 congatec GmbH

10.4.11 Acoustic Management Submenu

Feature	Options	Description
Automatic Acoustic Management	Enabled **Disabled**	Enable or disable Automatic Acoustic Management (AAM) on optical or hard disk drives.
SATA Port 0 Disk drive name Acoustic Mode	**Bypass** Quiet Max Performance	Select Acoustic noise level and performance optimization of optical or hard disk drives: 'Bypass' - Uses drive's preset value. 'Quiet' - Reduces the drive speed. 'Max' - Maximizes the drive speed.
SATA Port 1 Disk drive name Acoustic Mode	**Bypass** Quiet Max Performance	Same as at SATA port 0.
SATA Port 2 Disk drive name Acoustic Mode	**Bypass** Quiet Max Performance	Same as at SATA port 0.
SATA Port 3 Disk drive name Acoustic Mode	**Bypass** Quiet Max Performance	Same as at SATA port 0.

Note

This menu displays only if the SATA ports optical or hard disk driver is detected.

10.4.12 SMART Settings Submenu

Feature	Options	Description
SMART Self Test	**Disabled** Enabled	Enable this feature to run SMART self test on all hard disk drives during POST. **Note:** The Self-Monitoring, Analysis and Reporting Technology (SMART) predicts hard disk drives degradation and/or faults.

Copyright © 2015 congatec GmbH

10.4.13 Super I/O Submenu

Feature	Options	Description
Super IO Chip	No options	Displays the Super IO Chip type which is Windbond W83627
SIO Clock	**24MHz** 48MHz	Set Super I/O base clock.
▶ Serial Port 0	Submenu	
Serial Port	Disabled **Enabled**	Enable or disable serial port (COM).
Device Settings	No option	Displays the currently used settings.
Change Settings	**Auto** IO=3F8h; IRQ=4 IO=3F8h; IRQ=3,4,5,7,9,10,11,12 IO=2F8h; IRQ=3,4,5,7,9,10,11,12 IO=3E8h; IRQ=3,4,5,7,9,10,11,12 IO=2E8h; IRQ=3,4,5,7,9,10,11,12	Select the optimal setting for Super IO device.
▶ Serial Port 1	Submenu	
Serial Port	Disabled **Enabled**	Enable or disable serial port (COM).
Device Settings	No option	Displays the currently used settings.
Change Settings	**Auto** IO=2F8h; IRQ=3 IO=3F8h; IRQ=3,4,5,7,9,10,11,12 IO=2F8h; IRQ=3,4,5,7,9,10,11,12 IO=3E8h; IRQ=3,4,5,7,9,10,11,12 IO=2E8h; IRQ=3,4,5,7,9,10,11,12	Select the optimal setting for Super IO device
Device Mode	**Standard Serial Port Mode** IrDA Active pulse 1.6 uS IrDA Active pulse 3/16 bit time ASKIR Mode	Select the serial port mode.
▶Parallel Port	Submenu	
Parallel Port	**Disabled** Enabled	Enable or disable parallel port (LPT/LPTE).
Device Settings	No option	Displays the currently used settings.
Change Settings	**Auto** IO=378h; IRQ=5; IO=378h; IRQ=5,6,7,9,10,11,12; IO=278h; IRQ=5,6,7,9,10,11,12; IO=3BCh; IRQ=5,6,7,9,10,11,12;	Select the optimal setting for Super IO device.

Copyright © 2015 congatec GmbH

Feature	Options	Description
Device Mode	**STD Printer Mode** SPP Mode EPP-1.9 and SPP Mode EPP-1.7 and SPP Mode ECP Mode ECP and EPP 1.9 Mode ECP and EPP 1.7 Mode	Select the mode for the parallel port.

Note

This setup menu is available only if an external Winbond W83627 Super I/O has been implemented on the carrier board.

10.4.14 Serial Port Console Redirection Submenu

Feature	Options	Description
COM0 Console Redirection	**Disabled** Enabled	Enable or disable serial port 0 console redirection.
► Console Redirection Settings	Submenu	Opens the console redirection configuration submenu.
COM1 Console Redirection	**Disabled** Enabled	Enable or disable serial port 1 console redirection.
► Console Redirection Settings	Submenu	Opens console redirection configuration submenu.
► Legacy Console Redirection Settings	Submenu	Opens legacy console redirection submenu.
Legacy Serial Redirection Port	COM0 COM1	Select a COM port to display redirection of legacy operating system and legacy OPROM messages.
Serial Port for Out-of-Band Management/ Windows Emergency Management Services (EMS) Console Redirection	**Disabled** Enabled	Enable or disable serial port for Out-of-Band Management/ Windows Emergency Management Services (EMS) Console Redirection
► Console Redirection Settings	Submenu	Opens the console redirection configuration sub menu.

Note

The Serial Port Console Redirection can be enabled (functional) only if an external Super I/O offering UARTs has been implemented on the carrier board.

Copyright © 2015 congatec GmbH

10.4.14.1 Console Redirection Settings Submenu

Feature	Options	Description
Terminal Type	VT100 VT100+ VT-UTF8 **ANSI**	Set terminal type.
Baudrate	9600 19200 38400 57600 **115200**	Set the baud rate.
Data Bits	7 **8**	Set the number of data bits.
Parity	**None** Even Odd Mark Space	Set the parity.
Stop Bits	**1** 2	Set the number of stop bits.
Flow Control	**None** Hardware RTS/CTS	Set the flow control.
VT-UTF8 Combo Key Support	Disabled **Enabled**	Enable VT-UTF8 combination key support for ANSI/VT100 terminals.
Recorder Mode	**Disabled** Enabled	If the recorder mode is enabled, only text output will be sent over the terminal. **Note:** This feature is helpful to capture and record terminal data.
Resolution 100x31	**Disabled** Enabled	Enable or disable extended terminal resolution.
Legacy OS Redirection Resolution	**80x24** 80x25	Set number of rows and columns for the legacy operating system redirection.
Putty KeyPad	**VT100** LINUX XTERMR6 SCO ESCN VT400	Set function key and keypad for Putty.
Redirection After BIOS POST	**Enabled** Disabled	Enable this feature to continue serial redirection after POST.

Copyright © 2015 congatec GmbH

Note

The 'Serial Port Console Redirection' submenu in section 10.4.14 has three console redirection submenus - 'COM 0', 'COM 1' and 'Out of Band Management/Windows EMS console redirection' submenus. Section 10.4.14.1 shows the console redirection submenu for 'COM 0' and 'COM 1'. The 'Out of Band Management/Windows EMS console redirection' submenu does not have all the features listed above. It however contains an 'Out-of-Band Management Port Selection' feature which is not listed above.

10.4.15 SATA Submenu

Feature	Options	Description
SATA Controller(s)	**Enabled** Disabled	Enable or disable the onboard SATA controller(s).
SATA Mode Selection	**AHCI** RAID	Select the SATA controller mode. **Note:** Please ensure RAID is supported on the chipset before selecting it.
PCIe NAND Configuration	**Disabled** Enabled	Enable or disable PCIe NAND remapping. **Note:** This feature is only displayed in RAID SATA mode.
PCIe NAND Port Selection	Auto Port 1 Port 5 **Port 6**	Select PCIe NAND port. **Note:** This feature is only displayed in RAID SATA mode.
PCIe NAND Config Access Lockdown	**Disabled** Enabled	Enable or disable PCIe NAND remapping configuration access index/data lockdown. **Note:** This feature is only displayed in RAID SATA mode.
SATA Test Mode	Enabled **Disabled**	Enable this feature during verification measurements only.
Aggressive LPM Support	Enabled **Disabled**	Enable this feature for PCH to aggressively enter link power state.
SATA Controller Speed	**Default** Gen1 Gen2 Gen3	'Default' - Uses maximum speed supported by the chipset. 'Gen1' - 1.5 Gbit/s. 'Gen2' - 3 Gbit/s. 'Gen3' - 6 Gbit/s.
► Software Feature Mask Configuration	Submenu	RAID option ROM and Intel® Rapid Storage Technology driver will refer to this submenu to enable or disable the storage features.
Alternate ID	Enabled **Disabled**	Enable this feature to report alternate device ID. **Note:** This feature is only displayed in 'RAID SATA' mode.
Serial ATA Port 0, 1,2, 3	No option	Displays the name of the connected Hard Disk or DVDROM when the port is enabled. Nothing is displayed if the port is disabled or the port is enabled but without a connected device. On conga-TC97 variants equipped with base chipset, SATA ports 2 and 3 are not available.
Software Preserve	No option	Displays whether the detected drive supports software settings preservation.

Copyright © 2015 congatec GmbH

Feature	Options	Description
SATA Port	Disabled **Enabled**	Enable or disable the relevant SATA port. **Note:** This feature is not available in native IDE mode.
Hot Plug	**Disabled** Enabled	Select hot plug support for relevant SATA port. **Note:** This feature is not available in native IDE mode.
External SATA	**Disabled** Enabled	Enable or disable external SATA support on relevant SATA port. **Note:** This feature is not available in native IDE mode.
SATA Device Type	**Hard Disk Drive** Solid State Drive	Select whether the relevant SATA port is connected to SSD or HDD. **Note:** This feature is not available in native IDE mode.
Spin Up Device	**Disabled** Enabled	If enabled, the controller runs an initialization sequence during startup at the relevant SATA port. **Note:** Please enable this feature if your HDD or SSD requires it. Not available in native IDE mode.

10.4.15.1 Software Feature Mask Configuration Submenu

Feature	Options	Description
RAID0	Disabled **Enabled**	Enable or disable RAID0 feature.
RAID1	Disabled **Enabled**	Enable or disable RAID1 feature.
RAID10	Disabled **Enabled**	Enable or disable RAID10 feature.
RAID5	Disabled **Enabled**	Enable or disable RAID5 feature.
Intel Rapid Recovery Technology	Disabled **Enabled**	Enable or disable Intel® Rapid Recovery Technology.
Option ROM UI and Banner	Disabled **Enabled**	If enabled, the option ROM user interface is shown. Otherwise, no option ROM banner or information will be displayed if all disks and RAID volumes are normal.
HDD Unlock	Disabled **Enabled**	If enabled, indicates that the HDD password unlock in the operating system is enabled.
LED Locate	Disabled **Enabled**	Enable or disable LED locate.
IRRT Only on eSATA	Disabled **Enabled**	If enabled, only Intel® Rapid Recovery Technology (IRRT) volumes can span internal and external SATA (eSATA) drives. If disabled, any RAID volume can span internal and eSATA drives.
Intel Smart Response Technology	Disabled **Enabled**	Enable or disable Intel Smart Response Technology.
Option ROM UI Delay	**2 Seconds** 4 Seconds 6 Seconds 8 Seconds	If enabled, this feature indicates the delay of the option ROM user interface splash screen in a normal status.

10.4.16 PCI & PCI Express Submenu

Feature	Options	Description
PCI Settings		
PCI Latency Timer	**32,** 64, 96, 128, 160, 192, 224, 248 PCI Bus Clocks	Select value to be programmed into PCI latency timer register.
PCI-X Latency Timer	32**, 64**, 96, 128, 160, 192, 224, 248 PCI Bus Clocks	Select value to be programmed into PCI latency timer register.
VGA Palette Snoop	**Disabled** Enabled	Enable or disable VGA palette registers snooping.
PERR# Generation	**Disabled** Enabled	Enable or disable PCI device to generate PERR#.
SERR# Generation	**Disabled** Enabled	Enable or disable PCI device to generate SERR#.
Above 4G Decoding	**Disabled** Enabled	Enable this feature to decode 64-bit capable devices in Above 4G address space. **Note:** Please ensure the system supports 64-bit PCI decoding if you want to enable this feature.
Don't Reset VC-TC Mapping	**Disabled** Enabled	If system the has virtual channels the software can reset traffic class mapping through virtual channels to its default state. **Note:** Enabling this option will not modify VC resources.
Generate EXCD0/1_ PERST#	Disabled 1ms, 5ms, **10ms,** 50ms, 100ms, 150ms, 200ms, 250ms	The COM Express EXCD0_PERST# and EXCD1_PERST# pins are driven low during POST for the set time.
▶ PCI Hot-Plug Settings	Submenu	Opens the PCI Express Hot-Plug and standard HP controller settings.
▶ PIRQ Routing & IRQ Reservation	Submenu	Opens the manual PIRQ routing and interrupt reservation submenu for legacy devices.
PCIE Root Port Function Swapping	**Disabled** Enabled	Enable or disable PCI Express root port function swapping. Its value is enabled if PCIe NAND Configuration is set to "Enabled".
Subtractive Decode	**Disabled** Enabled	Enable or disable PCIe subtractive decode.
▶ PCI Express Port 0	Submenu	Opens the PCI Express Port submenu.
▶ PCI Express Port 1	Submenu	Opens the PCI Express Port submenu.
▶ PCI Express Port 2	Submenu	Opens the PCI Express Port submenu.
▶ PCI Express Port 3	Submenu	Opens the PCI Express Port submenu.

Copyright © 2015 congatec GmbH

10.4.16.1 PCI Hot-Plug Settings Submenu

Feature	Options	Description
BIOS Hot-Plug Support	Disabled **Enabled**	Enable this feature to support hot plug in BIOS. **Note:** Use this feature if the operating system does not natively support PCI Express and SHPC hot plug.
PCI Buses Padding	Disabled **1,** 2, 3, 4, 5	Select Padd PCI buses behind the bridge for hot plug.
I/O Resources Padding	Disabled **4K,** 8K, 16K, 32K	Select Padd PCI I/O resources behind the bridge for hot plug.
MMIO 32 bit Resources Padding	Disabled 1M, 2M, 4M, 8M, **16M,** 32M, 64M, 128M	Select Padd PCI MMIO 32 bit resources behind the bridge for hot plug
PFMMIO 32 bit Resources Padding	Disabled 1M, 2M, 4M, 8M, **16M,** 32M, 64M, 128M	Select Padd PCI MMIO 32 bit prefetchable resources behind the bridge for hot plug

10.4.16.2 PIRQ Routing & IRQ Reservation Submenu

Feature	Options	Description
PIRQA	**Auto** IRQ3, IRQ4, IRQ5, IRQ6, IRQ10 IRQ11, IRQ14, IRQ15	Set the interrupt for PIRQ. **Note:** These settings will only be effective while operating in PIC (non-IOAPIC) interrupt mode. Please refer to the board's resource list for a detailed list of devices connected to the respective IRQ.
PIRQB	Same as 'PIRQA'	Same as 'PIRQA'.
PIRQC	Same as 'PIRQA'	Same as 'PIRQA'.
PIRQD	Same as 'PIRQA'	Same as 'PIRQA'.
PIRQE	Same as 'PIRQA'	Same as 'PIRQA'.
PIRQF	Same as 'PIRQA'	Same as 'PIRQA'.
PIRQG	Same as 'PIRQA'	Same as 'PIRQA'.
PIRQH	Same as 'PIRQA'	Same as 'PIRQA'.
Reserve Legacy Interrupt 1	**None** IRQ3, IRQ4, IRQ5, IRQ6, IRQ10, IRQ11, IRQ14, IRQ15	Use this feature to reserve an interrupt for a legacy bus device. **Note:** The selected interrupt will not be assigned to any PCI/PCIe device.
Reserve Legacy Interrupt 2	Same as 'Reserve Legacy Interrupt 1'	Same as 'Reserve Legacy Interrupt 1'.

Copyright © 2015 congatec GmbH

10.4.16.3 PCI Express Port Submenu

Feature	Options	Description
PCI Express Port x	Disabled **Enabled**	Enable this feature if the port should be enabled without a connected PCIe device.
ASPM	**Disabled** L0s L1 L0sL1 Auto	Set PCIe Active State Power Management (ASPM) settings.
L1 Substates	**Disabled** L1.1 L1.2 L1.1 & L1.2	Set PCIe L1 substates settings.
URR	**Disabled** Enabled	Enable or disable PCIe Unsupported Request Reporting (URR).
FER	**Disabled** Enabled	Enable or disable PCIe device Fatal Error Reporting (FER).
NFER	**Disabled** Enabled	Enable or disable PCIe device Non-Fatal Error Reporting (NFER).
CER	**Disabled** Enabled	Enable or disable PCIe device (Correctable Error Reporting).
CTO	**Disabled** Enabled	Enable or disable PCIe Completion Timeout (CTO) timer.
SEFE	**Disabled** Enabled	Enable or disable Root PCIe System Error on Fatal Error (SEFE).
SENFE	**Disabled** Enabled	Enable or disable Root PCIe System Error on Non-Fatal Error (SENEF).
SECE	**Disabled** Enabled	Enable or disable Root PCI Express System Error on Correctable Error (SECE).
PME SCI	Disabled **Enabled**	Enable or disable PCIe Power Management Event (PME) SCI.
Always Enable Port	**Disabled** Enabled	Enable this feature to enable the internal PCIe interface even if no device is connected to the port.
PCIe Speed	**Auto** Gen1	Select maximum speed of the PCIe port: 'Auto' - Gen1 or Gen2 'Gen1' - 2.5GT/s **Note:** Some Gen2 devices start up in Gen1 mode and their operating system driver sets them to Gen2 mode. Some non-compliant PCIe devices only function properly if Gen1 is selected.
Detect Non-compliant Device	**Disabled** Enabled	Enable this feature to detect some non-compliant PCIe device(s). **Note:** POST time will be longer if this feature is enabled.

Copyright © 2015 congatec GmbH

Feature	Options	Description
Extra Bus Reserved	**0** - 7	Select extra bus reserved for bridges behind this root bridge.
Reserved Memory	1 - 20	Select reserved memory range for this root bridge. Default: 10
Prefetchable Memory	1 - 20	Select prefetchable memory range for this root bridge. Default: 10
Reserved I/O	0 - 20	Select reserved I/O range for this root bridge. Default: 4
PCIe LTR	Disabled **Enabled**	Enable or disable PCIe Latency Tolerance Reporting (LTR).
PCIe LTR Lock	Disabled **Enabled**	Enable or disable PCIe LTR configuration lock.
Snoop Latency Override	Disabled Manual **Auto**	Set snoop latency override for PCH PCIe.
Snoop Latency Multiplier	1 ns 32 ns **1024 ns** 32768 ns 1048576 ns 33554432 ns	Set snoop latency multiplier for PCH PCIe.
Snoop Latency Value	0 - 252	Select snoop latency value for PCH PCIe. Default: 60
No-Snoop Latency Override	Disabled Manual **Auto**	Set no-snoop latency override for PCH PCIe.
No-Snoop Latency Multiplier	1 ns 32 ns **1024 ns** 32768 ns 1048576 ns 33554432 ns	Select no-snoop latency multiplier for PCH PCIe.
No-Snoop Latency Value	0 - 255	Select no-snoop latency value for PCH PCIe. Default: 60

Copyright © 2015 congatec GmbH

10.4.17 UEFI Network Stack Submenu

Feature	Options	Description
UEFI Network Stack	**Disabled** Enabled	Enable or disable the UEFI network stack.
IPv4 PXE Support	Disabled **Enabled**	If disabled, IPv4 PXE boot option will not be created.
IPv6 PXE Support	Disabled **Enabled**	If disabled, IPv6 PXE boot option will not be created.
PXE Boot Wait Time	**0** - 5	Select wait time to press ESC and abort PXE Boot.
Media Detect Count	**1** - 5	Select number of times to check for the presence of media.

10.4.18 CSM & Option ROM Control Submenu

Feature	Options	Description
CSM Support	**Enabled** Disabled	Enable or disable execution of the CSM module. **Note:** Only disable this feature for pure UEFI operating system support.
Gate A20 Active	**Upon Request** Always	Configure the Gate A20 behavior: 'Upon Request' - Allows BIOS services to disable Gate A20. 'Always' - Does not allow to disable Gate A20 **Note:** This feature is useful when runtime code above 1MB is executed.
Option ROM Messages	**Force BIOS** Keep Current	Set display mode for option ROMs.
Boot Option Filter	**UEFI and Legacy** Legacy Only UEFI Only	Select which devices / boot loaders the system should boot to.
PXE Option ROM Launch Policy	**Do Not Launch** UEFI ROM Only Legacy ROM Only	Select the execution of UEFI and legacy PXE option ROMs.
Storage Option ROM Launch Policy	Do Not Launch UEFI ROM Only **Legacy ROM Only**	Select the execution of UEFI and legacy mass storage device option ROMs.
Video Option ROM Launch Policy	Do Not Launch UEFI ROM Only **Legacy ROM Only**	Select the execution of UEFI and legacy video option ROMs.
Other Option ROM Launch Policy	Do Not Launch **UEFI ROM Only** Legacy ROM Only	Select the execution of option ROMs for PCI / PCI Express devices other than network, mass storage or video.

Copyright © 2015 congatec GmbH

10.4.19 USB Submenu

Feature	Options	Description
USB Controllers	No option	Displays the number of enabled EHCI (USB2.0) and xHCI (USB3.0) controllers.
USB Devices	No option	Displays the detected USB devices.
xHCI Mode	Smart Auto **Auto** Enabled Disabled Manual	Select mode for all USB ports (0-3): 'Enabled' - USB ports will function in USB3.0 mode but require driver on the operating system. USB ports will not function in pre-operating system time if USB3.0 support in BIOS is disabled (see the USB3.0 support in BIOS item). 'Disabled' - USB ports will function in USB2.0 mode only and routed to the EHCI1 controller. 'Auto' - USB ports will initially function in USB2.0 mode but the operating system driver can switch them to USB 3.0. 'Smart Auto' - Identical to 'Auto', except the BIOS will take over the operating system driver setting after each restart.
EHCI (Ports USB0-7)	Disabled **Enabled**	Enable or disable EHCI (USB 2.0) controller. **Note:** One EHCI controller must be always enabled.
USB2.0 Pins Routing	Route Per-Pin **Route all Pins to EHCI** Route all Pins to xHCI	Route the USB2.0 pins to EHCI or xHCI controller.
USB2.0 Port 0 Pins	**Route to EHCI** Route to xHCI	Route the respective USB2.0 port to EHCI or xHCI controller.
USB2.0 Port 1 Pins	**Route to EHCI** Route to xHCI	Route the respective USB2.0 port to EHCI or xHCI controller.
USB2.0 Port 2 Pins	**Route to EHCI** Route to xHCI	Route the respective USB2.0 port to EHCI or xHCI controller.
USB2.0 Port 3 Pins	**Route to EHCI** Route to xHCI	Route the respective USB2.0 port to EHCI or xHCI controller.
USB2.0 Port 4 Pins	**Route to EHCI** Route to xHCI	Route the respective USB2.0 port to EHCI or xHCI controller.
USB2.0 Port 5 Pins	**Route to EHCI** Route to xHCI	Route the respective USB2.0 port to EHCI or xHCI controller.
USB2.0 Port 6 Pins	**Route to EHCI** Route to xHCI	Route the respective USB2.0 port to EHCI or xHCI controller.
USB2.0 Port 7 Pins	**Route to EHCI** Route to xHCI	Route the respective USB2.0 port to EHCI or xHCI controller.
USB3.0 Pins	Select Per-Pin **Disable all Pins** Enable all Pins	Enable or disable xHCI SuperSpeed support.
USB3.0 Port 0 Pins	**Disabled** Enabled	Enable or disable the xHCI SuperSpeed support on respective USB port.
USB3.0 Port 1 Pins	**Disabled** Enabled	Enable or disable the xHCI SuperSpeed support on respective USB port.

Copyright © 2015 congatec GmbH

Feature	Options	Description
Overcurrent Protection	**Disabled** Enabled	Enable or disable overcurrent protection on all USB ports.
► USB Ports Per-Port Disable Control	Submenu	Opens the submenu to individually disable USB ports
Legacy USB Support	**Enabled** Disabled Auto	Set legacy USB support: 'Enable' - Enables legacy USB support. 'Disable' - Keeps USB devices available only for EFI applications and BIOS setup. 'Auto' - Disables legacy support if no USB devices are connected.
External USB Controllers Support	Disabled **Enabled**	Enable or disable BIOS support for external USB controllers.
xHCI Hand-off	Disabled **Enabled**	This feature is a workaround for operating systems without xHCI hand-off support. **Note:** The xHCI ownership change should be claimed by xHCI operating system driver.
EHCI Hand-off	**Disabled** Enabled	This feature is a workaround for operating systems without EHCI hand-off support. **Note:** The EHCI ownership change should be claimed by EHCI operating system driver.
USB Mass Storage Driver Support	Disabled **Enabled**	Enable or disable USB mass storage driver support.
USB Transfer Timeout	1 sec 5 sec 10 sec **20 sec**	Set the timeout value for control, bulk, and interrupt transfers.
Device Reset Timeout	10 sec **20 sec** 30 sec 40 sec	Set USB mass storage device Start Unit command timeout.
Device Power -Up Delay Selection	**Auto** Manual	Select whether the delay time for a USB device to report itself properly to the host controller should be set automatically or manually. If set to 'Auto', the delay is 100ms for a root port or the value is derived from the hub descriptor for a hub port.
Device Power -Up Delay Value	1 - 40	Set power-up delay value in seconds. Default: 5
USB Mass Storage Device Name (Auto detected USB mass storage devices are listed here dynamically)	**Auto** Floppy Forced FDD Hard Disk CD-ROM	Every USB mass storage device that is enumerated by the BIOS will have an emulation type setup option. This option specifies the type of emulation the BIOS has to provide for the device:[1] 'AUTO' - Lets the BIOS auto detect the current formatted media. 'Floppy' - Emulates the device as a floppy drive. 'Forced FDD' - Allows a HDD to be connected as a floppy image.[2] 'Hard Disk' - Allows the hard disk to be emulated as a HDD. 'CD-ROM' - Assumes the CD-ROM is formatted as a bootable media.[3] **Notes:** [1]The device's formatted type and the emulation type provided by the BIOS must match for the device to boot properly. [2]The drive must be formatted with FAT12, FAT16 or FAT32. [3]As specified by the 'El Torito' Format Specification

10.4.19.1 USB Ports Per-Port Disable Control Submenu

Feature	Options	Description
USB Ports Per-Port Disable Control	**Disabled** Enabled	Set enabled to individually disable USB ports.
USB Port 0	Disabled **Enabled**	Enable or disable the respective USB2.0 port.
USB Port 1	Disabled **Enabled**	Enable or disable the respective USB2.0 port.
USB Port 2	Disabled **Enabled**	Enable or disable the respective USB2.0 port.
USB Port 3	Disabled **Enabled**	Enable or disable the respective USB2.0 port.
USB Port 4	Disabled **Enabled**	Enable or disable the respective USB2.0 port.
USB Port 5	Disabled **Enabled**	Enable or disable the respective USB2.0 port.
USB Port 6	Disabled **Enabled**	Enable or disable the respective USB2.0 port.
USB Port 7	Disabled **Enabled**	Enable or disable the respective USB2.0 port.

10.4.20 GPIO Configuration Submenu

Feature	Options	Description
Current GPO Configuration		
GPO 0 State	**Low** High	Set the state for GPO 0.
GPO 1 State	**Low** High	Set the state for GPO 1.
GPO 2 State	**Low** High	Set the state for GPO 2.
GPO 3 State	**Low** High	Set the state for GPO 3.
Current GPI Configuration	xxh	Each bit represents the state of the corresponding GPI.

Copyright © 2015 congatec GmbH

10.4.21 Diagnostics Settings Submenu

Feature	Options	Description
POST Code Redirection Settings		
Relay Interface	**Disabled** I2C SMBus BC Diagnostics Console	Select the relay interface to which the POST code will be redirected.
Primary Port Addr. Lowbyte (Dec)	0-255 **(128)**	Set the address for the primary debug port. The usual address value is 0x80 (i.e. 128 dec lowbyte and 0 highbyte). However, any multiple of 8 is valid for a primary debug port address.
Primary Port Addr. Highbyte (Dec)	0-255 **(0)**	Set the address for the primary debug port. The usual address value is 0x80 (i.e. 128 dec lowbyte and 0 highbyte). However, any multiple of 8 is valid for a primary debug port address.
Relay Device Address (Dec)	0-255 **(226)**	Specify the I2C/SMBus device address of e.g. a 7-segment LCD for POST code display. The factory settings for the SparkFun device is 0xE2(226). However, any even device address can be specified.
BC Diagnostics Console Settings		
BC Diagnostics Console Interface	**Disabled** BC AUX Port BC COM Port 0 BC COM Port 1	Select the interface to be used for the congatec Board Controller Diagnostic Console output or disable the diagnostic output.
Parity Bit	**No Parity** Even Parity Odd Parity	Choose the parity bits for the BC Diagnostic Console interface.
Stop Bits	**1 Stop Bit** 2 Stop Bits	Choose the stop bits for the BC Diagnostic Console interface.
Data Bits	5 Data Bits 6 Data Bits 7 Data Bits **8 Data Bits**	Choose the data bits for the BC Diagnostic Console interface.
Baudrate	1200 Baud 2400 Baud 4800 Baud **9600 Baud** 19200 Baud 38400 Baud	Choose the baudrate for the BC Diagnostic Console interface.

Copyright © 2015 congatec GmbH

10.4.22 PC Speaker Configuration Submenu

Feature	Options	Description
Debug Beeps	Disabled **Enabled**	Enable or disable general debug/status beep generation.
Input Device Debug Beeps	**Disabled** Enabled	Enable or disable input device debug beeps
Output Device Debug Beeps	**Disabled** Enabled	Enable or disable output device debug beeps
USB Driver Beeps	**Disabled** Enabled	Enable or disable USB driver beeps.

10.4.23 Intel® Ethernet Connection I218-LM Submenu

Feature	Options	Description
► NIC Configuration	Submenu	Opens the NIC Configuration submenu.
Blink LEDs	**0** - 15	Set the number of seconds for the Ethernet LEDs to blink.
UEFI Driver	No option	Displays the UEFI Driver version.
Adapter PBA	No option	Displays the Adapter PBA.
Chip Type	No option	Displays the type of the Chip in which the Ethernet controller is integrated.
PCI Device ID	No option	Displays the PCI Device ID of the Ethernet controller.
PCI Address	No option	Displays the PCI Bus:Device:Function number of the Ethernet controller.
Link Status	No option	Displays the Link Status.
MAC Address	No option	Displays the MAC Address.

Note

The MAC address is also displayed in the submenu title.

Copyright © 2015 congatec GmbH

10.4.23.1 NIC Configuration Submenu

Feature	Options	Description
Link Speed	**Auto Negotiated** 10 Mbps Half 10 Mbps Full 100 Mbps Half 100 Mbps Full	Select the port speed for the selected boot protocol.
Wake On LAN	Disabled **Enabled**	Enable this feature for the server to power on after receiving an in-band magic packet.

10.4.24 Intel® Rapid Storage Technology Submenu

Feature	Options	Description
Intel® Rapid Start Technology	**Disabled** Enabled	Enable or disable Intel® Rapid Start Technology.
No valid partition	No option	Warning message when the Intel® Rapid Start Technology is not completely set up.
Entry on S3 RTC Wake	Disabled **Enabled**	Enable or disable rapid Start invocation upon S3 RTC wake.
Entry After	0 - 120	RTC wake timer at S3 entry. Default: 10
Active Page Threshold Support	**Disabled** Enabled	Enable this feature to support RST with small partition.
Active Memory Threshold	**0** - 65535	Enable this feature to try supporting RST if the partition size is larger (in MB) than the active page threshold size. '0' sets this feature to automatic mode.
Hybrid Hard Disk Support	**Disabled** Enabled	Enable or disable hybrid hard disk support.
Rapid Start Display Save/ Restore	**Disabled** Enabled	Enable or disable rapid start display save/restore.
Rapid Start Display Type	**BIOS Save/Restore** Desktop Save/Restore	Set rapid start display type.

Copyright © 2015 congatec GmbH

10.5 Chipset Setup

Select the Chipset tab from the setup menu to enter the Chipset BIOS Setup screen. The menu is used for setting chipset features.

Main	Advanced	Chipset	Boot	Security	Save & Exit
		Processor (Integrated Components)			
		Platform Controller Hub (PCH)			

10.5.1 Processor (Integrated Components) Submenu

Feature	Options	Description
Processor Codename	No option	Displays the Processor codename.
VT-d Capability	No option	Displays whether the VT-d is supported by the processor.
VT-d	Disabled **Enabled**	Enable or disable VT-d support. **Note:** This feature is only displayed if the processor supports VT-d capability.
Thermal Device (B0:D4:F0)	Enabled **Disabled**	Enable or disable thermal device.
Audio Device (B0:D3:F0)	**Enabled** Disabled	Enable or disable the integrated audio device in the processor.
Audio Vanilla Mode	**Enabled** Disabled	Enable or disable SA Audio Vanilla mode.
NB CRID	**Disabled** Enabled	Enable or disable northbridge compatible revision ID support.
Above 4GB MMIO BIOS Assignment	**Enabled** Disabled	Enable or disable Above 4GB memory-mapped I/O BIOS assignment.
BDAT ACPI Table Support	Enabled **Disabled**	Enable this feature to support the BDAT ACPI table.
Graphics Turbo IMON Current	14 - **31**	Select graphics turbo IMON current value.
► DMI/OPI Configuration	Submenu	Opens the submenu to control various DMI functions. DMI link is the main, but exclusively internal bus between the processor and Platform Controller Hub (PCH).
► Memory Configuration	Submenu	Opens the submenu for memory configuration parameters.
► Memory Thermal Configuration	Submenu	Opens the submenu for memory thermal configuration options.
► GT - Power Management Control	Submenu	Opens the submenu for the Processor Graphics (GT) controller power management control options.

Copyright © 2015 congatec GmbH

10.5.1.1 DMI/OPI Configuration Submenu

Feature	Options	Description
DMI	No option	Displays the DMI bus characteristics.
DMI Vc1 Control	Enabled **Disabled**	Enable or disable DMI Vc1.
DMI Vcp Control	**Enabled** Disabled	Enable or disable DMI Vcp.
DMI Vcm Control	**Enabled** Disabled	Enable or disable DMI Vcm.
DMI Link ASPM Processor Side	**Disabled** L0s L1 L0sL1	Set Active State Power Management (ASPM) of the DMI link on the processor side. The DMI link is the main bus between the Processor and Platform Controller Hub (PCH).
DMI Extended Synch Control	Enabled **Disabled**	Enable or disable DMI extended synchronization.
DMI Gen 2	Enabled Disabled	Enable or disable DMI Gen2.
DMI De-emphasis Control	**-6 dB** -3.5 dB	Set the de-emphasis control on DMI.
DMI IOT	Enabled **Disabled**	Enable or disable DMI IOT.

10.5.1.2 Memory Configuration Submenu

Feature	Options	Description
Memory Frequency	No option	Displays the memory frequency.
Total Memory	No option	Displays the total amount of installed memory.
Memory Voltage	No option	Displays the memory voltage.
DIMM#0 (Bottom)	No option	Displays bottom memory socket DIMM information.
DIMM#2 (Top)	No option	Displays top memory socket DIMM information.
CAS Latency (tCL)	No option	Displays the CAS Latency (tCL).
CAS to RAS (tRCDmin)	No option	Displays the CAS to RAS (tRCDmin).
Row Precharge (tRPmin)	No option	Displays the Row Precharge (tRPmin).
Active to Precharge (tRASmin)	No option	Displays the Active to Precharge (tRASmin).

Copyright © 2015 congatec GmbH

Feature	Options	Description
DIMM Profile	**Default DIMM Profile** Custom Profile XMP Profile 1 XMP Profile 2	Select the DIMM timing profile. **CAUTION:** XMP profiles do not work on current modules and MUST not be selected. For congatec internal debugging only. DO NOT CHANGE.
► Custom Profile Control	Submenu	Opens submenu to select custom DIMM profiles. **CAUTION:** XMP profiles do not work on current modules and MUST not be selected. For congatec internal debugging only. DO NOT CHANGE.
Memory Frequency Limiter	**Auto** 1067, 1333, 1600, 1867, 2133, 2400, 2667, 2933, 3200	Set the maximum memory frequency selections in MHz. **Note:** This feature is hidden if DIMM profile is set to 'Custom Profile'.
Max TOLUD	**Dynamic** 1 GB, 1.25 GB, 1.5 GB, 1.75 GB, 2 GB, 2.25 GB, 2.5 GB, 2.75 GB, 3 GB, 3.25 GB	Select the maximum Top of Low Usable DRAM (TOLUD). **Note:** The dynamic assignment will adjust the TOLUD based on the largest MMIO length of the installed graphic controller.
Enh Interleave Support	Disabled **Enabled**	Enable or disable enhanced interleave support.
RI Support	Disabled **Enabled**	Enable or disable rank interleave support. **Note:** RI and HORI cannot be enabled at the same time.
DLL Weak Lock Support	Disabled **Enabled**	Enable or disable DLL weak lock support.
Enable RH Prevention	Disabled **Enabled**	Enable this feature to actively prevent Row Hammer (RH).
Row Hammer Solution	**Hardware RHP** 2x Refresh	Type of method used to prevent RH.
RH Activation Probability	**1/2^14** 1/2^13 1/2^12 1/2^11	Adjust MC for hardware Row Hammer Probability (RHP).
Enable RH Keep Seeds	**Disabled** Enabled	Enable this feature to keep LFSR seeds on warm boots for hardware RHP.
Mc Lock	Disabled **Enabled**	Enable this feature to lock MC registers.
Ch Hash Support	Disabled Enabled **Auto**	Enable or disable channel hash support. **Note:** This feature only in memory interleaved mode.
Ch Hash Mask	1 - 16383	Set the bit(s) to be included in the XOR function. Default: 12494 **Note:** Bit mask corresponds to bits [19:6].

Copyright © 2015 congatec GmbH

Feature	Options	Description
Ch Hash Interleaved Bit	BIT06 **BIT07** BIT08 BIT09	Select the bit for channel interleaved mode. **Note:** BIT07 interleaves the channels at a 2 cacheline granularity, BIT08 at 4 and BIT09 at 8.
NMode Support	**Auto** 1N Mode 2N Mode	Select NMode support.
Memory Scrambler	**Enabled** Disabled	Enable or disable memory scrambler support.
RMT Crosser Support	Enabled **Disabled**	Enable or disable RMT crosser support.
MRC Fast Boot	**Enabled** Disabled	Enable or disable MRC fast boot.
DIMM Exit Mode	**Auto** Slow Exit Fast Exit	DIMM Exit Mode control
Power Down Mode	No Power Down APD PPD PPD-DLLoff Auto	Select power down mode: 'PPD' - Sets DIMM exit mode for fast exit. 'Auto' - Sets DIMM exit mode for slow exit.
Memory Remap	**Enabled** Disabled	Enable or disable memory remap Above 4G.
GDXC Support	Enabled **Disabled**	Enable or disable GDXC support.

10.5.1.3 Memory Thermal Configuration

Feature	Options	Description
▶Memory Power and Thermal Throttling	Submenu	Opens the submenu for memory power and thermal throttling options.
DDR PowerDown and Idle Counter	**BIOS** PCODE	'BIOS' - BIOS controls DDR CKE mode and idle timer value. 'PCODE' - PCODE manages the modes.
Refresh 2x Support	**Disabled** Enabled for WARM or HOT Enabled HOT Only	Select refresh 2x support.
LPDDR Thermal Sensor	Disabled **Enabled**	If this feature is enabled, MC uses MR4 to read LPDDR thermal sensors.
SelfRefresh Enable	Disabled **Enabled**	Enable or disable SelfRefresh.

Copyright © 2015 congatec GmbH

Feature	Options	Description
SelfRefresh IdleTimer	**512** - 65535	Select range for DLCK800s.
Throttler CKEMin Defeature	**Disabled** Enabled	Enable or disable Throttler CKEMin
Throttler CKEMin Timer	0 - 255	Set timer value for CKEMin. Default: 48
Memory Thermal Management	**Disabled** Enabled	Enable or disable memory thermal management.
Virtual Temperature Sensor (VTS)	**Disabled** Enabled	Enable or disable Virtual Temperature Sensor (VTS).

10.5.1.4 GT - Power Management Control Submenu

Feature	Options	Description
Processor Graphics Controller Info	No option	Displays the processor graphics controller info.
RC6 (Render Standby)	Disabled **Enabled**	Enable or disable render standby support.
GT Overclocking Support	**Disabled** Enabled	Enable or disable GT overclocking support.
GT Overclocking Frequency	0 - 255	Set RP0 overclocking frequency (MLCClk) in multiples of 50 MHz. Default: 22
GT Overclocking Voltage	**0** - 255	Add voltage to the original RP0 voltage in is 1/256 volt steps.

Copyright © 2015 congatec GmbH

10.5.2 Platform Controller Hub (PCH) Submenu

Feature	Options	Description
Intel PCH SKU Name	No option	Displays the SKU Name of the PCH.
PCI Express Clock Gating	**Disabled** Enabled	Enable or disable PCIe clock gating for each root port.
DMI Link ASPM PCH Side	**Disabled** Enabled	Enable or disable Active State Power Management (ASPM) of DMI link PCH side. DMI link is the main bus between the Processor and Platform Controller Hub (PCH).
DMI Link Extended Synch Control	**Disabled** Enabled	Disable or enable extended synch on PCH side of the DMI link.
Isolate SMBus Segments	Never During POST **Always**	Set to cut off the off-board SMBus segment. **Note:** This feature is a workaround for external SMBus devices that do not conform to specification.
PCIe-USB Glitch W/A	**Disabled** Enabled	Enable or disable PCIe-USB glitch W/A for bad USB device(s) connected behind PCIe/PEG port.
USB Precondition	**Disabled** Enabled	Enable or disable precondition work on USB host controller and root ports for faster enumeration.
BTCG	**Enabled** Disabled	Enable or disable USB related trunk clock gating.
HDA Controller	Disabled Enabled **Auto**	Select activation of the HDA controller device: 'Disabled' - Disables HDA controller unconditionally. 'Enabled' - Enables HDA controller unconditionally. 'Auto' - Enables HDA controller if codec present, disables otherwise.
HDA PME	**Disabled** Enabled	Enable or disable the power management capability of the audio controller.
PCH LAN Controller	**Enabled** Disabled	Enable or disable the onboard, PCH integrated Ethernet controller.
LAN PHY Drives GPIO27	**Disabled** Enabled	'Enabled' - Uses LAN Phy drives GPIO27. 'Disabled' - Uses platform drives GPIO27.
Wake on LAN	**Enabled** Disabled	Enable or disable the wake on LAN capability of the onboard, PCH integrated Ethernet controller.
SLP_LAN# Low on DC Power	**Disabled** Enabled	Enable or disable SLP_LAN# low on DC power.
Board Capability	SUS_PWR_DN_ACK **DeepSx**	'SUS_PWR_DN_ACK' - Sends disabled to PCH. 'DeepSx' - Shows DeepSx policies.

Copyright © 2015 congatec GmbH

Feature	Options	Description
DeepSx Power Policies	**Disabled** Enabled in S5/Battery Enabled in S4-S5/Battery Enabled in S3-S4-S5/Battery Enabled in S5 Enabled in S4-S5 Enabled in S3-S4-S5	Select DeepSx mode. **Note:** Only enable DC/battery powered mode for selected Sx state.
GP27 Wake From DeepSx	Disabled **Enabled**	Enable this feature to wake from DeepSx by the assertion of GP27 pin.
PCIe Wake From DeepSx	**Disabled** Enabled	Enable this feature to wake from DeepSx by the assertion of PCIe.
Serial IRQ Mode	Quiet **Continuous**	Set serial IRQ mode.
X2APIC Support	Disabled **Enabled**	Enable or disable X2APIC interrupt controller support.
SB CRID	**Disabled** Enabled	Enable or disable southbridge compatible revision ID support.
PCH Cross Throttling	**Disabled** Enabled	Enable or disable the PCH corss throttling feature.
SLP_S4 Assertion Width	Disabled 1-2 Seconds 2-3 Seconds 3-4 Seconds **4-5 Seconds**	Set a minimum assertion width of the SLP_S4# signal.
Port 80h Redirection	**LPC Bus** PCIe Bus	Select where to send port 80h cycles.

10.6 Security Setup

Select the Security tab from the setup menu to enter the Security setup screen.

10.6.1 Security Settings

Feature	Options	Description
BIOS Password	Enter password	Enter the BIOS and setup administrator password
BIOS Lock	Disabled **Enabled**	Enable or disable BIOS Lock Enable (BLE) and SMM BIOS Write Protect (SMM_BWP) bits. If enabled, BIOS flash write accesses are only possible via dedicated BIOS SMM interfaces.
BIOS Update & Write Protection	**Disabled** Enabled	If enabled, congatec flash software will require BIOS password to perform write or erase operations.
HDD Security Configuration		
List of all detected hard disks supporting the security feature set		Select device to open device security configuration submenu.
► Secure Boot Menu	Submenu	

10.6.1.1 BIOS Security Features

BIOS Password/ BIOS Write Protection

A BIOS password protects the BIOS setup program from unauthorized access. This ensures that end users cannot change the system configuration without authorization. With an assigned BIOS password, the BIOS prompts the user for a password on a setup entry. If the password entered is wrong, the BIOS setup program will not launch.

The congatec BIOS uses a SHA256 based encryption for the password, which is more secured than the original AMI encryption. The BIOS password is case sensitive with a minimum of 3 characters and a maximum of 20 characters. Once a BIOS password has been assigned, the BIOS activates the grayed out 'BIOS Update and Write Protection' option. If this option is set to 'enabled', only authorized users (users with the correct password) can update the BIOS. To update the BIOS, use the congatec system utility cgutlcmd.exe with the following syntax:

```
CGUTLCMD BFLASH <BIOS file> /BP: <password> where <password> is the assigned BIOS password.
```

For more information about "Updating the BIOS" refer to the congatec system utility user's guide, which is called CGUTLm1x.pdf and can be found on the congatec GmbH website at www.congatec.com.

With the BIOS password protection and the BIOS update and write protection, the system configuration is completely secured. If the BIOS is password protected, you cannot change the configuration of an end application without the correct password.

Copyright © 2015 congatec GmbH

Note

1. *Use cgutlcmd.exe version 1.5.3 or later.*

2. *Built in BIOS recovery is disabled in the congatec BIOS firmware to prevent the BIOS from updating itself due to the user pressing a special key combination or a corrupt BIOS being detected. congatec considers such a recovery update a security risk because the BIOS internal update process bypasses the implemented BIOS security explained above.*

3. *Only the congatec utility interface to the SMI handler of the BIOS flash update is enabled. Other interfaces to the SMI handler are disabled to prevent non congatec tools from writing to the BIOS flash. As a result of this restriction, flash utilities supplied by AMI or Intel will not work .*

UEFI Secure Boot

Secure Boot is a security standard defined in UEFI specification 2.3.1 that helps prevent malicious software applications and unauthorized operating systems from loading during system start up process. Without secure boot enabled (not supported or disabled), the computer simply hands over control to the bootloader without checking whether it is a trusted operating system or malware. With secure boot supported and enabled, the UEFI firmware starts the bootloader only if the bootloader's signature has maintained integrity and also if one of the following conditions is true:

- The bootloader was signed by a trusted authority that is registered in the UEFI database.
- The user has added the bootloader's digital signature to the UEFI database. The BIOS provides the key management setup sub-menu for this purpose.

Note

The congatec BIOS by default enables CSM (Compatibility Support Module) and disables secure boot because most of the industrial computers today boot in legacy (non-UEFI) mode. Since secure boot is only enabled when booting in native UEFI mode, you must therefore disable the CSM (compatibility support module) in the BIOS setup to enable Secure Boot.

A full description of secure boot is beyond the scope of this users guide. For more information about how secure boot leverages signature databases and keys, see the secure boot overview in the windows deployment options section of the Microsoft TechNet Library at http://technet.microsoft.com.

10.6.1.2 Hard Disk Security Features

Hard Disk Security uses the Security Mode feature commands defined in the ATA specification. This functionality allows users to protect data using drive-level passwords. The passwords are kept within the drive, so data is protected even if the drive is moved to another computer system.

The BIOS provides the ability to 'lock' and 'unlock' drives using the security password. A 'locked' drive will be detected by the system, but no data can be accessed. Accessing data on a 'locked' drive requires the proper password to 'unlock' the disk.

The BIOS enables users to enable/disable hard disk security for each hard drive in setup. A master password is available if the user can not remember the user password. Both passwords can be set independently however the drive will only lock if a user password is installed. The max length of the passwords is 32 bytes.

During POST each hard drive is checked for security mode feature support. In case the drive supports the feature and it is locked, the BIOS prompts the user for the user password. If the user does not enter the correct user password within four attempts, the user is notified that the drive is locked and POST continues as normal. If the user enters the correct password, the drive is unlocked until the next reboot.

In order to ensure that the ATA security features are not compromised by viruses or malicious programs when the drive is typically unlocked, the BIOS disables the ATA security features at the end of POST to prevent their misuse. Without this protection it would be possible for viruses or malicious programs to set a password on a drive thereby blocking the user from accessing the data.

Note

If the user enables password support, a power cycle must occur for the hard drive to lock using the new password. Both user and master password can be set independently however the drive will only lock if a user password is installed.

10.7 Boot Setup

Select the Boot tab from the setup menu to enter the Boot setup screen.

10.7.1 Boot Settings Configuration

Feature	Options	Description
Quiet Boot	**Disabled** Enabled	'Disabled' - Displays normal POST diagnostic messages. 'Enabled' - Displays OEM logo instead of POST messages. The default OEM logo is a dark screen.
Setup Prompt Timeout	**1** 0 - 65535	Set number of seconds to wait for setup activation key. '65535' - Waits indefinitely (0xFFFF). '0' - Does not wait (not recommended).
Bootup NumLock State	**On** Off	Select the keyboard numlock state.
Battery Support	**Auto (Batt. Manager)** Battery-Only On I2C Bus Battery-Only On SMBus	Select battery system support: 'Battery-Only On I2C Bus' - Uses I2C bus for battery-only systems. 'Battery-Only On SMBus' - Uses SMBus for battery-only systems. 'Auto' - Intended for systems equipped with a real battery system manager connected via I2C or SMBus.
System Off Mode	**G3/Mech Off** S5/Soft Off	Set system state after shutdown if a battery system is present.
Power Loss Control	**Remain Off** Turn On Last State	Select mode of operation if an AC power loss occurs: 'Remain Off' - Keeps the power off until the power button is pressed. 'Turn On' - Restores power to the computer. 'Last State' - Restores the previous power state before power loss occurred. **Note:** Only works with an ATX type power supply.
AT Shutdown Mode	System Reboot **Hot S5**	Select the behavior of an AT-powered system after a shutdown.
Enter Setup If No Boot Device	No **Yes**	Select whether the setup menu should be started if no boot device is connected.
Enable Popup Boot Menu	No **Yes**	Select whether the popup boot menu can be started.
Boot Priority Selection	UEFI Standard **Type Based**	Set boot priority: 'Device Based' - Select boot priority from a list of currently detected devices. 'Type Based' - Select boot priority from a list of device types even if they are not connected yet.
Boot Option Sorting Method	**Legacy First** UEFI First	Set boot option sorting method: 'Legacy First' - Tries all legacy boot option first before first UEFI boot option. 'UEFI First' - Tries all UEFI boot options before first legacy boot option.

Copyright © 2015 congatec GmbH

Feature	Options	Description
1st, 2nd, 3rd, ... Boot Device (Up to 12 boot devices can be prioritized if UEFI Standard priority list control is selected. If "Type Based" priority list control is enabled only 8 boot devices can be prioritized.)	Disabled SATA 0 Drive SATA 1 Drive USB Harddisk USB CDROM Other USB Device Onboard SD Card Storage Onboard LAN External LAN Firmware-based UEFI Bootloader Other Device	This view is only available when in the default "Type Based" mode. When in 'UEFI Standard' mode, you will only see the devices that are currently connected to the system.
UEFI Fast Boot	**Disabled** Enabled	Enable to boot with a minimum set of devices. No effect for BBS / legacy boot options.
SATA Support	Last Boot HDD Only, **All SATA Devices**	
VGA Support	Auto **UEFI Driver**	'Auto' - Installs legacy video option ROM for legacy operating system boot. Boot logo will not be shown during POST. 'UEFI Driver' - Installs UEFI GOP driver.
USB Support	Disabled Full Init **Partial Init**	'Disabled' - USB devices will not be available before operating system boot. 'Full Init' - All USB devices will be available during POST and after operating system boot. 'Partial Init' - Specific USB ports/devices will not be available before operating system boot.
PS/2 Device Support	Disabled **Enabled**	Disable to skip PS/2 devices.
Network Stack Driver Support	**Disabled** Enabled	Disable to skip the UEFI network stack driver installation.
UEFI Screenshot Capability	**Disabled** Enabled	If enabled, press CTRL+ALT+F12 to take a screen shot of the current setup, POST, UEFI shell or driver and save it as PNG on the first writable partition

Note

1. *The term 'AC power loss' stands for the state when the module looses the standby voltage on the 5V_SB pins. The standby voltage is continuously monitored after the system is turned off. If the standby voltage is not detected within 30 seconds, this is considered an AC power loss condition. If the standby voltage remains stable for 30 seconds, it is assumed that the system was switched off properly.*

2. *Inexpensive ATX power supplies often have problems with short AC power sags. The system turns off but might not switch back on, even when the PS_ON# signal is asserted correctly by the module. In this case, the internal circuitry of the ATX power supply has become confused. Usually, a AC power off/on cycle is necessary to recover from this situation.*

10.8 Save & Exit Menu

Select the Save & Exit tab from the setup menu with the <Arrow> keys to enter the Save & Exit setup screen.

Feature	Description
Save Changes and Exit	Exit setup menu after saving the changes. The system is only reset if settings have been changed.
Discard Changes and Exit	Exit setup menu without saving any changes.
Save Changes and Reset	Save changes and reset the system.
Discard Changes and Reset	Reset the system without saving any changes.
Save Options	
Save Changes	Save changes made so far to any of the setup options. Stay in setup menu.
Discard Changes	Discard changes made so far to any of the setup options. Stay in setup menu.
Restore Defaults	Restore default values of all the setup options.
► Boot Override	
List of all boot devices currently detected.	Select device to leave setup menu and boot from the selected device. Only visible and active if Boot Priority Selection setup node is set to "Device Based".

11 Additional BIOS Features

The BIOS setup description of the conga-TC97 can be viewed without having access to the module. However, access to the restricted area of the congatec website is required in order to download the necessary tool (CgMlfViewer) and Menu Layout File (MLF).

The MLF contains the BIOS setup description of a particular BIOS revision. The MLF can be viewed with the CgMlfViewer tool. This tool offers a search function to quickly check for supported BIOS features. It also shows where each feature can be found in the BIOS setup menu.

For more information, read the application note "AN42 - BIOS Setup Description" available at www.congatec.com.

Note

If you do not have access to the restricted area of the congatec website, contact your local congatec sales representative.

11.1 BIOS Versions

The BIOS displays the BIOS project name and the revision code during POST, and on the main setup screen. The initial production BIOS for conga-TC97 is identified as BV97R7xx or BU97R7xx where:

- BV97 is the BIOS for modules with the premium chipset
- BU97 is the BIOS for modules with the base chipset
- R is the identifier for a BIOS ROM file, 7 is the so called feature number and xx is the major and minor revision number.

The BV97 BIOS binary size is 16MB and the BU97 BIOS binary size is 8MB.

11.2 Updating the BIOS

BIOS updates are recommeded to correct platform issues or enhance the feature set of the module. The conga-TC97 features a congatec/AMI AptioEFI firmware on an onboard flash ROM chip. You can update the firmware with the congatec System Utility. The utility has five versions—UEFI shell, DOS based command line[1], Win32 command line, Win32 GUI, and Linux version.

For more information about "Updating the BIOS" refer to the user's guide for the congatec System Utility "CGUTLm1x.pdf" on the congatec website at www.congatec.com.

Note

1. *Deprecated*

Copyright © 2015 congatec GmbH

Caution

The DOS command line tool is not officially supported by congatec and therefore not recommended for critical tasks such as firmware updates. We recommend to use only the UEFI shell for critical updates.

11.3 Supported Flash Devices

The conga-TC97 supports the following flash device:

- Winbond W25Q128JVSIQ (8MB)

The flash device listed above can be used on the carrier board for external BIOS support. For more information about external BIOS support, refer to the Application Note AN7_External_BIOS_Update.pdf on the congatec website at http://www.congatec.com.
