**Product Guide  
Spring 2015**

We simplify the use of embedded technology

**Gerhard Edi, Chief Executive Officer**  
Our embedded technologies are ideally suited for the Internet of Things

**Matthias Klein, Chief Operating Officer**  
With our EDM services we make the implementation of customer applications easier and more cost effective

congatec AG is approaching global market leadership in the segment of Computer-On-Modules. In a report by information and analytics provider IHS Inc. - "Standalone Boards, Computer-on-Modules and PICMG 1.x" - congatec ranks no. 1 in terms of revenue for computer modules in Europe, the Middle East and Africa (EMEA). The driving force behind this success is a clear product focus together with global expansion into new regions. Toby Colquhoun, senior analyst embedded modules for IHS Technology, indicated: "The COM market has typically grown between 10 to 15 percent per year, for the past five years. congatec has moved from a start-up company to one of the largest embedded suppliers in less than a decade. According to our analysis, congatec had the highest sales, in terms of revenue, in EMEA for COM technology and the second-highest worldwide."

congatec CEO Gerhard Edi: "Our embedded technologies are ideally suited to provide solutions to current mega trends such as the "Internet of Things", data security and energy efficiency. We work very closely with our technology partners Intel, AMD and Freescale in the development of our products, which have gained a market reputation for their reliability. This is an optimal starting point for continued rapid growth."

In order to support customers throughout the entire product lifecycle, congatec added EDM (Embedded Design & Manufacturing) services to its portfolio. Customers benefit from congatec's rich experience as a manufacturer of high quality computer modules leading to reduced development time and costs. Existing know-how and infrastructure make it possible for customers to outsource custom designs and solutions to congatec. As a single supplier covering the complete range of cost-effective standard solutions to individual EDMS projects, congatec supports the full range of technology platforms – from x86 to ARM including standard form factors such as specialized single board computers and computer modules. For EDMS projects, congatec acts as a service provider supporting the specific system designs of customers. congatec's EDMS support starts at the design phase and includes project management, the development of specific hardware and software, production control, system integration and global logistics, as well as the provision of technical support.

"We are convinced that our new services will add even greater flexibility to the development of embedded solutions. We will make the implementation of customer applications easier and more cost effective, thereby giving our customers a greater competitive advantage", says congatec COO Matthias Klein.

**10 years of congatec**

Established in December 2004 by 13 former JUMPtec employees, the company has grown steadily to its current team of 177 employees. The history of congatec is a true success story. In just a decade the company has established itself as the market leader for computer modules in EMEA – and the success story will continue.

A key reason for congatec's success is the consistent strategy of corporate expansion. Today, congatec has six subsidiaries located in Taiwan, Japan, China, the US, Australia and the Czech Republic. In addition, the company has worldwide distribution agreements with major partners.

**New branding**

The new company logo, introduced during November 2014, reflects the extended offering and highlights the diversity of the new congatec brand. congatec is no longer the just a

COM company and is about to become a solution provider. "We simplify the use of embedded technologies" is the congatec promise, everything we do is based on this statement.

**Successful 2015**

congatec CEO Gerhard Edi explains: "Thanks to our highly professional global workforce and a business strategy that always has the best interest of the customer in mind, the start-up from 2004 has become a serious player in the international embedded market with a sales volume of about 85 million US dollars during the 2014 fiscal year. We are proud of this development and of our exceptional team that has made this success possible.

**Our past accomplishments are also an incentive towards our goal to be among the five leading embedded solution providers worldwide by 2020."**

# congatec

## International Partnerships

- congatec
- partners

### Economical Principal

congatec products and technologies offer innovative solutions for the commercial and industrial use of embedded computer technology.

### Module Know-How

The congatec engineering teams are committed to embedded module technology. This vast amount of knowledge allows for superior hardware and software support for our customers.

### Quality

congatec AG is certified in compliance with ISO9001. All congatec products are made to meet the highest quality standards.

### Software and Driver Support

congatec offers advanced Board-Support-Packages, which include both the latest tested drivers from silicon vendors and the congatec specific drivers for accessing all of our additional embedded module features.

### BIOS Expertise

congatec has an experienced engineering staff for BIOS UEFI and board controller firmware development. The congatec implementations expands the functionality to enable professional industry applications.

### System Integration

When designing a system, special attention must be paid to issues such as heat dissipation,

electrostatic / electromagnetic compatibility, signal compliance, mechanical system design, and etc. By using congatec products, you gain access to congatec's experience, which will help you deal with these issues. You can also opt to utilize our Module+ program to out-source single engineering tasks or a complete system design to congatec.

### Design-In Support

The congatec teams are committed to provide the best design-in support to customers. This enables a perfect fit of the congatec Computer-On-Modules to the customer's carrier boards.

### Lifecycle Support

congatec offers life cycle support for the complete lifetime of the product. congatec pays close attention to component life cycles in order to provide advanced end-of-life product notifications. In addition, congatec focuses on efficient processing of repairs including, when applicable, replacement modules.

### Focussing on core competencies

Embedded computing is congatec's passion. The clear focus on Computer-On-Modules results in a high degree of specialization for the experienced congatec employees. Accessing this power and industry knowledge allows for customers to focus on their special application know-how and industries.

## Business Segments

### INDUSTRIAL AUTOMATION

Industrial Automation is a conservative Market with strong focus on reliability and long term perspectives. Demanding environments require highest, industry-proof quality and longevity. Standards and scalability enable right sized platform concepts with easy upgrade paths as well as guaranteed future.

### ENTERTAINMENT

Entertainment spans from simple Handheld devices to arcade-style high-end gaming machines with high-performance graphics capabilities. The module concept and the industrial single board computers fit perfectly to the industry's demand for unique scalable and application ready platforms. This makes it easy to implement latest platforms with highest performance at lowest cost for development and certification.

### MEDICAL

Medical has a unique demand for highest safety and reliability meeting regulatory requirements. Applications range from demanding computing requirements for optical Analysis like CRT, MRT and Ultrasonic to compact, low power mobile diagnostic and supportive equipment. Ultra mobile, low-power, battery-operated devices with highly interactive graphical user interfaces are a rapidly growing emerging segment.

### TRANSPORTATION

This applications require highest levels of robustness, reliability and longevity in demanding environment. Applications span from custom automotive equipment to kiosk and signage use for public transportation as well as to freight tracking and delivery control.

### ENERGY

The intelligent use of renewable energies is highly dependent on proper process control to ensure maximum efficiency even in a harsh environment. Power distribution control challenges with demand for highest computing performance and reliability.

### INTERNET OF THINGS

A key enabler for new IoT appliances is the right processor technology platform to allow for intelligent connected devices. To achieve lowest R&D costs, the platform need to be standardized. As time to market is an increasingly important competitive factor, simplified development paired with highest data security levels are required.

### POINT OF SALE (POS)/KIOSK

This dynamic market is powered by the trends to cashless payment and comfortable self-service stations. Applications range from small and mobile payment devices up to full featured, networked information kiosks and vending machines with touch control.

# COM Advantages

## when compared to a Full Custom Design

### Lower Costs

COMs save money. The cost of the development and end product are dramatically reduced. This holds true for the product's entire life-cycle. COMs provide a cost advantage from the very start.

- Lower engineering cost
- Lower product cost
- Lower cost of life cycle management

### Reduced Risk

COMs minimize risk. Basic changes during the design phase, or in the middle of a product's life cycle, are easily managed. Simply plug in the next-generation COM module and continue. COMs allow for easy upgrades.

- Lower design risk
- Lower transition risk

### Improved Flexibility

COMs are flexible and can meet all performance requirements. The modules support a wide range of performance up to the Intel® Core™ i7 processor, as well as future architectures. The COM standards are well established and are already prepared for the future.

- Scalability
- Performance upgrades are easy
- Technology upgrades are easy

### Time-To-Market Advantage

COMs put you in a leading position. The use of customized carrier boards reduces necessary engineering effort by separating your design work from the embedded PC technology. Use COMs in your design and you can stay focused on your own core competency.

- Faster time to market
- Faster engineering
- Faster reaction time to market changes

# EDM Services

## for embedded designs

COM Express carrier board design with 9 DisplayPort video channels for video wall applications

congatec supports customer developments throughout the entire product life cycles with EDM (Embedded Design & Manufacturing) services.

Customers benefit from congatec's rich experience as a manufacturer of high quality computer modules with synergistic effects leading to reduced development time and costs.

Passive cooled digital signage controller with Intel® Core™ i7 performance

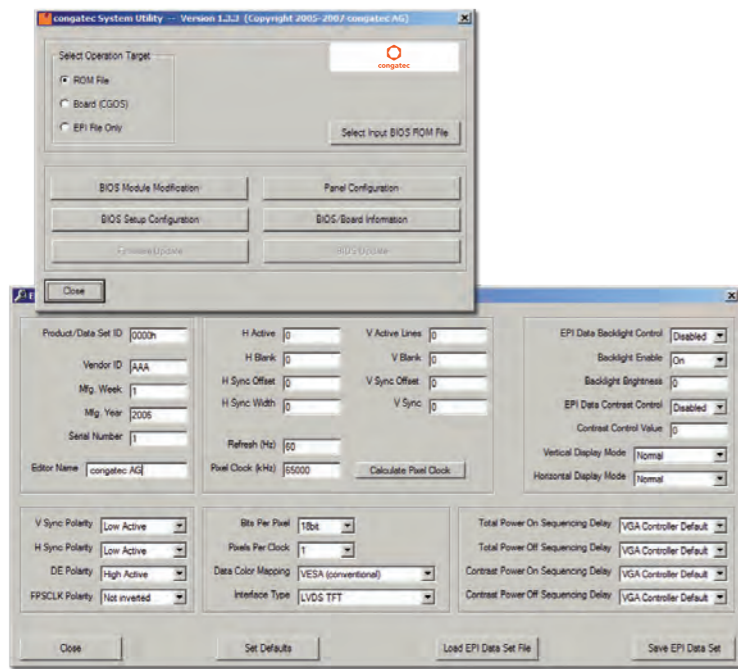

### congatec's EDMS support

congatec's EDMS support starts at the design phase and includes project management, the development of specific hardware and software, production control, system integration and global logistics, as well as the provision of technical support.

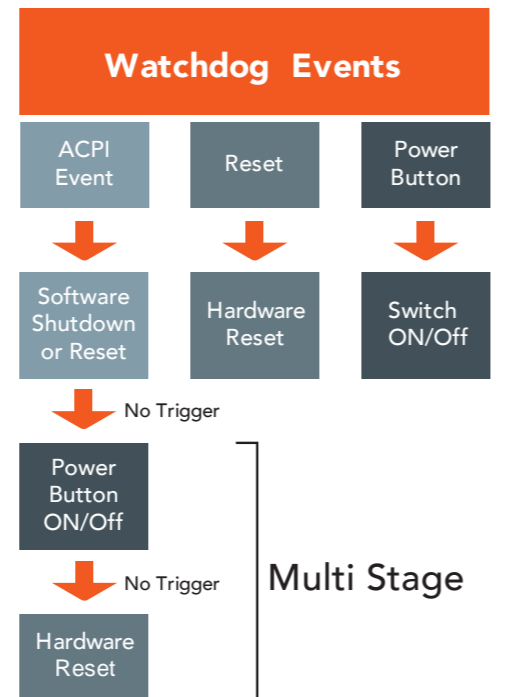

- Services for Customized Designs
- Modules Customization
- Custom Designed Carrier Boards
- Customized Single Board Computers
- Full Custom Hardware Designs
- Standard and Special Cooling Solutions
- Housing Design and Manufacturing
- System Integration with Certifications
- Efficient High Quality Production Services

Existing know-how and infrastructure make it possible for customers to outsource custom designs and solutions to congatec. As a single supplier covering the complete range of cost-effective standard solutions to individual EDMS projects, congatec supports the full range of technology platforms – from x86 to ARM, and from standard form factors to specialized single board computers and computer modules. For EDMS projects congatec acts as a service provider supporting the specific system designs of customers.

# congatec embedded BIOS / UEFI

congatec System Utility

Multi Stage Watchdog Timer

Embedded computer users usually require more than the standard functionality of an office computer. congatec has taken these requirements into account when designing BIOS/UEFI functionalities. Based on our large amount of BIOS and UEFI experience, we have implemented the embedded requirements into our powerful congatec BIOS / UEFI platform.

### Optimized Power

ACPI Power Management and System Configuration is supported by the congatec BIOS/UEFI according to the ACPI specification.

### Multi Stage Watchdog Timer

All congatec modules are equipped with a multi stage watchdog timer supporting different events such as ACPI event, hardware reset or power button. It can either assert a single event and/or any combination of these events.

### congatec Board Controller

An onboard  $\mu$ c fully isolates some of the embedded features, such as system monitoring or the I<sup>2</sup>C bus, from the x86 core architecture. This results in higher embedded feature performance and higher overall system reliability.

### Fast Mode I<sup>2</sup>C Bus

The I<sup>2</sup>C Bus is a simple serial bus interface often used for sensors, converters or data storage in embedded applications. All congatec modules offer a 400 kHz multi-master I<sup>2</sup>C Bus that provides maximum I<sup>2</sup>C bandwidth.

### BIOS Setup Data Backup

The BIOS CMOS settings are held in flash memory to allow battery-less applications.

### Manufacturing Data Storage

The congatec board controller provides a rich data set of manufacturing and board information: Serial Number, Article Number, EAN Code, Manufacturing and Repair Date, System Statistics and more. The BIOS also keeps track of dynamically changing running time and boot count data. All this data is accessible by a uniform API.

### User Data Storage Area

congatec modules provide 32 Bytes of non-volatile storage in the EEPROM and a 64 kByte block in the BIOS flash memory.

### Hardware Monitoring

The congatec BIOS has the routines to monitor critical components implemented. Fans, operating voltages and several temperature sensors can be monitored without incurring additional development costs.

### Display Auto-detection

The LVDS flatpanel can be autodetected by the BIOS via EDID support or set as fixed panel timing in BIOS setup.

### OEM BIOS Logo

The BIOS can display a custom logo instead of the traditional diagnostic output during POST.

**OEM Customization - Do It Yourself BIOS** The congatec embedded BIOS allows customers to do create their own BIOS binary by adding OEM code and data modules. These OEM modules help reduce the need for customized BIOS versions.

### OEM BIOS Code

Customer specific code can be executed while booting the system. During power on self test (POST) the congatec BIOS can give control to customer specific code. This gives customers more flexibility to initialize special hardware extensions.

### OEM CMOS Defaults

The congatec embedded BIOS allows the customer to store their own defaults in flash memory.

### OEM Verb Table

To initialize HDA codecs on the carrier board from BIOS level.

### OEM SLP string and OEM SLIC Table

Helps to activate licensed copies of a Windows operating system (OS) so end users of the embedded system will not have to activate the OS themselves.

### OEM EDID for LVDS Panel

Create your own EDID data for any LVDS flat panel and add to the list of predefined Timings offered in the BIOS setup.

### congatec System Utility

All embedded BIOS features are accessible through the use of a congatec Windows tool. This includes all manufacturing and statistical information; e.g. serial number, running hours, boot counter etc. BIOS default settings, bootlogo and flat panel configurations can easily be programmed using this flexible and powerful tool.

### 32/64 Bit Uniform OS API

The congatec embedded BIOS Features are accessible through the uniform APIs EAPI (a PICMG<sup>®</sup> definition) and CGOS.

### Board Support Packages

congatec offers advanced BSPs, which include both the latest tested drivers from silicon vendors and the congatec specific drivers for accessing all of our additional embedded BIOS and module features.

# congatec Industrial Single Board Computers

The use of Single Board Computers is an easy and fast way for creating industrial computing applications when no special functionalities are required. This can be an alternative to the more flexible Computer-On-Modules approach.

Thin-Mini ITX 170 x 170 mm<sup>2</sup>  
at a maximum height of 20 mm

Picture Connectors Pico-ITX

Pico-ITX 100 x 72 mm<sup>2</sup> for most  
compact industrial SBC solutions

## Mini-ITX, Thin Mini-ITX and Pico-ITX

The congatec Single Board Computer implementations offer affordable pricing, embedded features and industrial reliability.

On top of the rich interface selection the congatec SBCs offer many extra features to allow for industrial use:

- Lowest power consumption utilizing embedded mobile CPUs
- Passive cooling option
- 24/7 operation
- Ceramic capacitors for extended lifetime
- Extended temperature options for harsh environment

- Long term availability 7+ years
- Customization of hardware and BIOS/UEFI possible
- Extreme flat solutions based on the Thin Mini-ITX standard with max. height of 20mm
- Expandable by PCI Express and Mini PCI Express slots
- BIOS/UEFI adaptations
- Enhanced security features with optional TPM chip

When desktop boards reach their limits then the congatec SBCs are first choice.

# Internet-of-Things Solution

The combination of the conga-QA3 Qseven module based on the Intel® Atom™ processor E3800 family with the validated software package from Intel, Wind River and McAfee provides new services based on the connection of devices with each other and the cloud.

## Software functionalities for an typical IoT application

To allow for a quick and easy start of an IoT application congatec created a development kit containing all components for a rapid prototype. Additionally to a Qseven Module based on the latest Intel® processor a compact IoT Carrier-Board, a 7" LVDS touch display, a power supply and all required cables and accessories are included. The most important part is the included software. The "Intel IoT Gateway Solution" covers all aspects of connectivity, manageability and security.

This allows that the engineers can focus mostly to their specific IoT application. The combination of the conga-QA3 with the validated solution stack of the Intel Gateway Solutions for IoT provides a pre-integrated and open platform to bring secure IoT solutions to market quickly. congatec simplifies the use of embedded technology.

# Qseven® the Mobile COM Definition

Targeting next generation ultra mobile embedded processors built using latest mobile chip technologies, the Qseven® format complements the low power and small size of these processors. By exploiting the small form factor of the industry's latest processors, the Qseven® format offers high performance computing power, delivered in a module measuring only 70 x 70 mm².

Qseven® also supports ARM processors for mobile and ultra low power consumption applications. Unlike COM Express®, XTX™ and ETX®, it is not limited to x86 processor technology. One carrier board can be equipped with x86 or ARM Qseven® modules.

conga-QMX6 original size

### Freedom

Qseven® allows for the use of non x86 processor architectures. It supports the low power mobile ARM processor architecture. Customers have the freedom to use all kinds of Qseven® modules without the need to change the carrier board.

### Mobile Applications

Qseven® is unlike previous Computer-On-Modules (COM) standards due to its primary focus being directed towards mobile and ultra mobile applications.

### Low Power

Qseven® is defined for a maximum power consumption of 12 Watts. It is designed to be operated by single 5 Volt DC power and provides all additional signals for battery management. This simple power requirement allows for small mobile solutions powered by compact two cell batteries.

### Connector

Unlike most previous module standards, Qseven® does not require an expensive board-to-board connector. Instead,

it utilizes a very affordable MXM card slot with 230 pins in a 0.5 mm configuration.

### Legacy Free

Qseven® is a legacy free standard focused on high speed serial interfaces such as PCI Express® and Serial ATA. Qseven® omits support for legacy interfaces like EIDE and PCI, in order to provide ideal support for today's, as well as future, CPU's and chipsets.

### Compact Size

The module's dimensions are a mere 70x70mm². This means it can be easily integrated into size constricted systems.

### Slim Design

Compared to COM Express®, Qseven® enables slimmer mechanical housings.

### SGeT e.V.

The Qseven® Specification is hosted by the 2012 founded SGeT standardization group. congatec is founding member, board member and Qseven® development team member of the SGeT.

# COM Express®

## the Concept

COM Express® is a PICMG® standard that defines a Computer-On-Module, or COM, packaged as a super component. The defined interfaces provide a smooth transition path from legacy interfaces to modern differential signals. This includes DisplayPort, PCI Express®, USB 3.0 and Serial ATA. congatec was editor within the PICMG® for the COM Express® specifications 2.0 / 2.1 and for the COM Express® Design Guide.

COM Express Type 2		COM Express Type 6		Type 10	
Ethernet	IDE	Ethernet	USB 3.0 0-3	Ethernet	
LPC		LPC			
SATA 0-3	PCI 32 Bit	SATA 0-3	PCIe 6-7	SATA 0-1	
I2C		I2C			
HDA		HDA	DDI 0-2	HDA	
USB 0-7		USB 0-7		USB 0-7/USB 3.0 0-1	
ExpressCard		ExpressCard		DDI 0	
PCIe 0-5	PEG/SDVO	PCIe 0-5	PEG	PCIe 0-3	
GPIO		GPIO/SDIO		GPIO/SDIO	
LVDS		LVDS/eDP		LVDS 1x24 / eDP	
KBD		SER 0-1 / CAN		SER 0-1 / CAN	
SPI		SPI		SPI	
Power	Power	Power	Power	Power	

### New interfaces

COM Express® defines 440 interconnect pins between the COM Express® module and the carrier board. Legacy buses such as PCI, parallel ATA are supported with type 2 modules. Type 6 modules feature additional PCI Express® 2.0 Lanes, USB 3.0, 3 DisplayPort/HDMI outputs and no longer multiplexes the PEG port with graphic signals.

### Legacy Free

COM Express® is a legacy free standard. Outdated interfaces such as floppy, PS/2 keyboard/mouse, LPT are no longer supported. If required, these legacy interfaces can be optionally generated on the customized carrier board. The Type 6 pin-out definition follows that path. IDE and 32 Bit PCI Bus are replaced by the new video interface DDI (switchable to DVI/HDMI or DisplayPort), additional PCI Express® lanes and the SuperSpeed signals for USB 3.0.

### Size

COM Express® describes four different sizes. The major form factors are the Compact (95x95 mm²) and the Basic (95x125 mm²). The primary difference between the modules is the overall physical size and the performance envelope supported by each.

### Thermal Design

As with Qseven® and TXX/ETX, the COM Express® definition includes a heatspreader that acts as a thermal interface between the COM Express® module and the system's cooling solution. All heat generating components are thermally conducted to the heatspreader in order to avoid hot spots.

The heatspreaders and cooling solutions for the high power modules utilize congatecs patented high efficient flat heat pipes in order to allow for maximum performance and highest reliability.

### PCI Express®

COM Express® offers up to 24 PCI Express® lanes. This allows the customer to equip their embedded PC application with the next generation of PC performance. PCI Express® is a low pin count interface with maximum bandwidth per pin. PCI Express® is defined for a maximum bandwidth of up to 8 GBit/s per lane and direction.

### GPIO

COM Express® defines freely usable general purpose inputs and outputs.

### PCI Express® Graphics (PEG)

The PEG interface utilizes up to 16 PCI Express® lanes in order to drive an external ultra high performance graphic controller located on the carrier board. The PEG Port is available with the conga-BP77 Type 2 implementation and with most Type 6 modules.

### USB

The Type 2 modules feature up to 8 USB 2.0 ports. New with Type 6 are the additional SuperSpeed signals for up to four USBs. Up to 4 USB 3.0 ports (including USB 2.0) and 4 USB 2.0 ports are available now.

### Video Output

Common video outputs for Type 2 and Type 6 modules are VGA and LVDS for direct flat panel support. With Type 6, the Intel® SDVO interface was reduced to a maximum of 1 channel. New for Type 6 is the implementation of 3 DDI (Digital Display Interface). Each of the DDI can be switched to TMDS (for DVI or HDMI) or DisplayPort. The current Intel® implementation additionally allows the first DDI to be switched to SDVO mode. Future Type 6 modules will also allow for an embedded Displayport. This eDP interface will be multiplexed with the LVDS A channel.

# COM Express® Mini Type 10

## Product Overview

84 x 55 mm<sup>2</sup>

- conga-MA3E – Powerful and Small**
- 3<sup>rd</sup> Gen. Intel® Atom™ processor family
  - COM Express Mini Type 10
  - ECC protected memory up to 8 GByte
  - High resolution Intel® Gen. 7 graphics
  - Temperature range up to -40°C .. +85°C

# congatec cooling solutions

## congatec's smart cooling pipes pave the way for unlimited performance growth for COM Express® modules

The new cooling system based on cooling pipes which are integrated in the standardized heatspreader of the COM Express specification. With this solution it becomes possible to cool next generation high-performance processors with a power dissipation of well over 35W TDP. The real problem are the hot spots around the processor and chipset. The congatec improved cooling concept results in a lower processor temperature, which is essential for a more frequent activation of Intel® Turbo Boost 2 Technology to ensure maximum COM performance and energy efficiency. As a result, the processor can operate at higher levels than the maximum permitted thermal design power (TDP).

### The advantages at a glance:

- Fast spot cooling for full performance
- Elimination of gap filler layer
- Elimination of mechanical stress leads to higher quality
- Better cooling extends the life span of the module
- Heat pipe principle enables innovative customer-specific cooling concepts

congatec's new heat pipe cooling design is available in different variants comprising a passive, active and customer-specific solution that creates space for innovative ideas. For example, the heat pipe can be designed in such a way that it can be connected to a customer-specific heat sink. Fanless designs are possible provided the casing is equipped with appropriately sized cooling fins. Ultimately, the design depends on the specific application. The key features of the concept are equally applicable to other electronic circuits.

The new cooling solution is also ideal for systems with low power dissipation. The modules have a higher thermal reserve, which increases their life span and reliability. Average temperature reductions of 5 Kelvin can double the statistical life span – a convincing argument when considering the total cost over the lifetime of a system.

Heatspreader

Heatpipe Heatspreader

Heatspreader and passive cooling solution for Qseven®

Passive cooling solution

Active cooling solution

Standard cooling solution

### Heatspreader Concept

The specifications for Qseven®, COM Express®, XTX™ and ETX® embedded computer modules include a heatspreader definition, which is the mechanical thermal interface. All the heat generated by power consuming components such as chipsets and processors is transferred to the system's cooling via the heatspreader. This can be achieved by either a thermal connection to the casing, a heat pipe or a heat sink.

### Heatspreader Mounting

congatec heatspreader solution are optimized for vertically and horizontally mounted applications. All thermal stacks are fixed in place through the use of pins to ensure that there is no movement. Depending on top or bottom mounting versions with through holes or threads are available.

### Cooling Solutions

Compared with sandwich-type constructions for heatspreaders and cooling systems, active and passive cooling solutions remove one layer from the process. The heatspreader and cooler are manufactured as one unit, which enables them to provide faster thermal conduction. For an active cooling solution, a high performance quiet fan has been integrated within the cooling fins.

### Heatspreaders featuring Heatpipes

The congatec heatspreaders and cooling solutions for the high performance modules are featuring heatpipes in order to boost performance and reliability. A copper block is mounted on the chip to absorb heat and to mitigate the effects of thermal peaks. Between the chip and the copper block, a phase-change material is placed to improve the heat transmission. To account for different component heights and manufacturing tolerances, the copper block is spring loaded to apply an optimized pressure to the silicon die. The copper block and the cooling fins or heat plate are connected by flexible flat heatpipes.

All this results in fast spot cooling, good thermal connections, elimination of mechanical stress and greater cooling performance. This leads to while retaining geometric dimensions – achieving all these requirements sounds like asking the impossible. However, congatec has mastered the challenge by skilfully combining the classical solution with a structurally modified heat pipe. Unlike the classical design, a flattened heat pipe is used to transfer heat from the chip to the heat spreader plate. The heat pipe is attached directly to the cooling blocks on the chip and the heatspreader plate. As a result, more heat is transported from the processor environment to the heatspreader, hot spots are cooled more quickly and the processor is cooled more optimally. Spiral springs with defined spring tension, as well as the heat pipe itself with its flexible height, put optimum pressure on the processor chip.

# Qseven Engineering Tools

## conga-QKit

This complete kit provides the ability to start evaluating Qseven® modules immediately.

---

conga-QEVAL evaluation carrier board

---

conga-LDVI LVDS to DVI converter

---

conga-FPA2 evaluation flat panel adapter

---

SATA-to-CF card adapter

---

SATA-to-IDE converter

---

ATX power supply

---

Complete cable set

---

congatec USB memory stick

---

## conga-QKIT/ARM

This complete kit provides the ability to start evaluating Qseven® ARM modules immediately

---

Qseven® module based on Freescale's new i.MX6 ARM Cortex A9 processors conga-QMx6/QC-2G (PN: 016103)

---

conga-QEVAL/ARM Qseven® evaluation carrier board for standard Qseven® ARM modules

---

conga-LDVI/EPI LVDS to DVI converter board for digital flat panels with onboard EEPROM

---

conga-ACC/I2S Audio card adapter with I2S/HDA codec

---

conga-HDMI ADD2 card to connect a HDMI display

---

MicroSDHC-Card 8 GByte Contains a ready to go bootloader image (Ubuntu Oneiric)

---

HDMI to DVI-D adapter

---

Standard ATX power supply (180 Watt)

---

Cable set

---

## Qseven® Mobility Kit

This kit provides the ability to start immediately evaluating Qseven® modules for all kinds of mobile applications.

---

Qseven® module based on AMD Embedded G-Series Processors conga-QAF/T40R-2G (015300)

---

Mini carrier board for Qseven® conga-MCB/ Qseven® DP (020731)

---

congatec Smart Battery Manager Module conga-SBM3/Qseven®

---

Adapter for generic LVDS panels

---

USB memory stick with the latest drivers

---

Universal power supply (19V, 90W),

---

Rechargeable Smart Li-Ion battery pack, 2 cells, 7.2V, 4.56Ah with battery connector adapter

---

7" TFT widescreen touch monitor 800x480, LVDS

---

USB touch controller

---

Cable set

---

## Qseven® Mini Carrier Board

Mini Carrier Board for Qseven® with smart battery manager interface for mobile applications and SDVO display interface support for Intel® mobile platforms.

---

Small size: 95 x 145 mm

---

1x miniPCI Express Socket

---

1x RJ45 connector with GB Ethernet transformer

---

1x CFAST Socket, 1x SATA, 1x 8 bit SD Card socket

---

2x USB at the front panel, 4x USB on pin header

---

1x Display Port or 1x HDMI

---

Dual LVDS 18/24 bits

---

High Definition Audio, two 3.5' Jack on front panel, SPDIF on header

---

CAN transceiver

---

Power button/reset button/mini card WIFI radio disable/sleep button/LID button

---

Versions for SDVO (conga-QA & conga-QA6), DisplayPort (conga-QAF) and ARM (conga-QMx6)

---

## conga-QEVAL

Evaluation board for Qseven® modules. To achieve a quick start with Qseven® congatec offers an evaluation carrier board, which routes all the Qseven® signals to standard interface connectors.

---

4x PCI Express® x1, 1x ExpressCard, 1x Mini PCI Express Card, 1x SDIO Card Socket

---

Gigabit Ethernet, 6x USB 2.0 + 1x client, 2x SATA

---

MIC, Line In, Line Out, SPDIF

---

LPC POST code display, System speaker

---

Power button, Reset button, LID button, Sleep button

---

PCI Express® switch, external BIOS flash

---

I²C EEPROM, aux signals for battery management

---

1x Dual Channel LVDS

---

1x SDVO, HDMI or Display Port

---

Backlight control

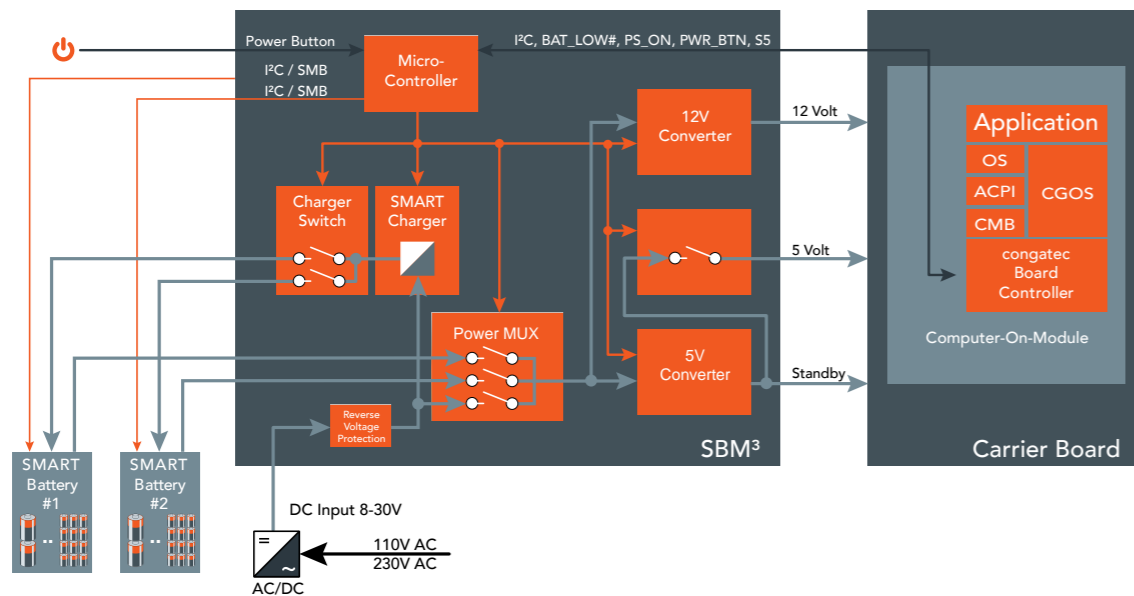

---

12 V single power input, ATX power input connector, CMOS battery

---

# COM Express®

## Engineering Tools

### SMART Battery Manager Module

conga-SBM<sup>3</sup> is a complete battery manager sub system. It is designed for the use with low power congatec COM Express® compact modules and congatec Qseven® modules.

Supports battery two smart batteries with configurations 2S up to 4S

Dual charge and discharge for high efficiency

S3 (Suspend to RAM) / S5 (Soft-Off) support

Zero current from batteries in off mode

LEDs provide a direct view of charging and battery capacity status

Input voltage of 8 - 30V DC, with input power delimitation

Output 12V / ~35W, 5V / ~20W

Battery charging max. 4A or 2x 2A in dual charge mode

Temperature: Operating: 0 .. +70°C, Storage: -25 .. +80°C

In combination with an ACPI operating system, the battery functionality associated with mobile platforms is supported by congatec embedded computers. Now it's much easier to build mobile embedded applications that have notebook battery functionality.

### conga-Cdebug

COM Express® Debug Platform. The conga-Cdebug provides a debug platform for your application specific carrier board. Simply use it as a transparent debug interface between your carrier board and the COM Express® module.

---

Supports battery two smart batteries with configurations 2S up to 4S

---

Dual charge and discharge for high efficiency

---

S3 (Suspend to RAM) / S5 (Soft-Off) support

---

Zero current from batteries in off mode

---

LEDs provide a direct view of charging and battery capacity status

---

Input voltage of 8 - 30V DC, with input power delimitation

---

Output 12V / ~35W, 5V / ~20W

---

Battery charging max. 4A or 2x 2A in dual charge mode

---

Temperature: Operating: 0 .. +70°C, Storage: -25 .. +80°C

---

### conga-MCB|COM Express Mini Carrier Board

Full featured carrier board for COM Express® Compact Type 2.

---

1x miniPCI Express Socket

---

1x RJ45 connector with integrated Gigabit Ethernet Transformer

---

1x CFAST Socket, 2x SATA, 1x 4 bit SD Card Socket

---

2x USB at the front panel, 4x USB pin header

---

On board PC speaker, Line Out, Mic In at front panel

---

1x Display Port from DDI port C and 1x HDMI from SDVO port B

---

LVDS interface (EPI - Embedded Panel Interface) 40 pin 1 mm 2 rows box header

---

Backlight connector, 4 pin 2.00 mm box header

---

On board lithium battery for CMOS backup and real time clock

---

All signals for ACPI battery support (conga-SBMC<sup>3</sup>) at the feature connector

---

5pin Micro-Fit Power Connector, 3pin Fan header, 12V, tacho signal

---

Size 145 x 95 mm

---

### conga-CEVAL

Evaluation carrier board for COM Express® Type 2 modules

---

To achieve a quick start with COM Express® congatec offers an evaluation carrier board, which routes all the COM Express® signals to standard interface connectors. Supports COM Express® Compact and Basic modules using connector Pinout Type 2.

---

4x1 PCI Express®, 1x Express Card, 1x 16 PCI Express® Graphics (PEG), 1x Mini PCI Express® Card, 4x 32 bit PCI

---

Gigabit Ethernet

---

6x USB

---

HDA compatible codec

---

AC97 optional via connector

---

4x SATA, 1x PATA

---

2x COM, 1x LPT, 1x Floppy, PS2 kbd./mouse  
PCI/LPC Postcode display

---

System speaker, Power button, Reset button, CMOS Battery

---

CRT connector, LVDS interface

---

### conga-TEVAL

Evaluation carrier board for COM Express® Type 6 modules.

---

To achieve a quick start with COM Express® congatec offers an evaluation carrier board, which routes all the COM Express® signals to standard interface connectors. Supports COM Express® Compact and Basic modules using connector Pinout Type 6.

---

6x1 PCI Express®, 1x Express Card, 1x 16 PCI Express® Graphics (PEG), 1x Mini PCI Express® Card

---

Gigabit Ethernet

---

6x USB

---

2x COM, 1x LPT, 1x GPIO/SDIO, LPC Postcode display  
System speaker, Power button, Reset button, CMOS Battery

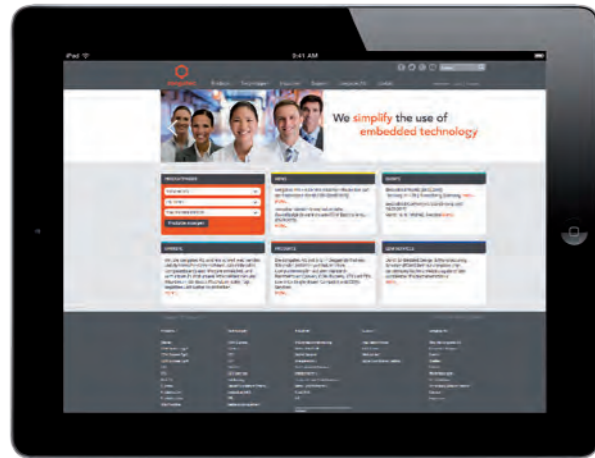

---

CRT connector, LVDS interface

---
