Preface

This user's guide provides information about the components, features, connectors and system resources available on the conga-HPC/sILL. It is one of three documents that should be referred to when designing a COM-HPC® application. The other reference documents that should be used include the following:

COM-HPC® Carrier Design Guide
COM-HPC® Module Base Specification

The links to these documents can be found on the congatec GmbH website at www.congatec.com

Disclaimer

The information contained within this user's guide, including but not limited to any product specification, is subject to change without notice.

congatec GmbH provides no warranty with regard to this user's guide or any other information contained herein and hereby expressly disclaims any implied warranties of merchantability or fitness for any particular purpose with regard to any of the foregoing. congatec GmbH assumes no liability for any damages incurred directly or indirectly from any technical or typographical errors or omissions contained herein or for discrepancies between the product and the user's guide. In no event shall congatec GmbH be liable for any incidental, consequential, special, or exemplary damages, whether based on tort, contract or otherwise, arising out of or in connection with this user's guide or any other information contained herein or the use thereof.

Intended Audience

This user's guide is intended for technically qualified personnel. It is not intended for general audiences.

RoHS Directive

All congatec GmbH designs comply with EU RoHS Directive 2011/65/EU and Delegated Directive 2015/863.

Electrostatic Sensitive Device

All congatec GmbH products are electrostatic sensitive devices. They are enclosed in static shielding bags, and shipped enclosed in secondary packaging (protective packaging). The secondary packaging does not provide electrostatic protection.

Do not remove the device from the static shielding bag or handle it, except at an electrostatic-free workstation. Also, do not ship or store electronic devices near strong electrostatic, electromagnetic, magnetic, or radioactive fields unless the device is contained within its original packaging. Be aware that failure to comply with these guidelines will void the congatec GmbH Limited Warranty.

Symbols

The following symbols are used in this user's guide:

Warning

Warnings indicate conditions that, if not observed, can cause personal injury.

Caution

Cautions warn the user about how to prevent damage to hardware or loss of data.

Note

Notes call attention to important information that should be observed.

Copyright Notice

Copyright © 2023, congatec GmbH. All rights reserved. All text, pictures and graphics are protected by copyrights. No copying is permitted without written permission from congatec GmbH.

congatec GmbH has made every attempt to ensure that the information in this document is accurate yet the information contained within is supplied "as-is".

Trademarks

Product names, logos, brands, and other trademarks featured or referred to within this user's guide, or the congatec website, are the property of their respective trademark holders. These trademark holders are not affiliated with congatec GmbH, our products, or our website.

Warranty

congatec GmbH makes no representation, warranty or guaranty, express or implied regarding the products except its standard form of limited warranty ("Limited Warranty") per the terms and conditions of the congatec entity, which the product is delivered from. These terms and conditions can be downloaded from www.congatec.com. congatec GmbH may in its sole discretion modify its Limited Warranty at any time and from time to time.

The products may include software. Use of the software is subject to the terms and conditions set out in the respective owner's license agreements, which are available at www.congatec.com and/or upon request.

Beginning on the date of shipment to its direct customer and continuing for the published warranty period, congatec GmbH represents that the products are new and warrants that each product failing to function properly under normal use, due to a defect in materials or workmanship or due to non conformance to the agreed upon specifications, will be repaired or exchanged, at congatec's option and expense.

Customer will obtain a Return Material Authorization ("RMA") number from congatec GmbH prior to returning the non conforming product freight prepaid. congatec GmbH will pay for transporting the repaired or exchanged product to the customer.

Repaired, replaced or exchanged product will be warranted for the repair warranty period in effect as of the date the repaired, exchanged or replaced product is shipped by congatec, or the remainder of the original warranty, whichever is longer. This Limited Warranty extends to congatec's direct customer only and is not assignable or transferable.

Except as set forth in writing in the Limited Warranty, congatec makes no performance representations, warranties, or guarantees, either express or implied, oral or written, with respect to the products, including without limitation any implied warranty (a) of merchantability, (b) of fitness for a particular purpose, or (c) arising from course of performance, course of dealing, or usage of trade.

congatec GmbH shall in no event be liable to the end user for collateral or consequential damages of any kind. congatec shall not otherwise be liable for loss, damage or expense directly or indirectly arising from the use of the product or from any other cause. The sole and exclusive remedy against congatec, whether a claim sound in contract, warranty, tort or any other legal theory, shall be repair or replacement of the product only.

Certification

congatec GmbH is certified to DIN EN ISO 9001 standard.

Technical Support

congatec GmbH technicians and engineers are committed to providing the best possible technical support for our customers so that our products can be easily used and implemented. We request that you first visit our website at www.congatec.com for the latest documentation, utilities and drivers, which have been made available to assist you. If you still require assistance after visiting our website then contact our technical support department by email at support@congatec.com

Terminology

Term	Description

1 Introduction

1.1 COM-HPC® Concept

COM-HPC® is an open standard defined specifically for high performance Computer-on-Modules (COMs) for embedded systems. The defined module types are client module with fixed input voltage, client module with variable input voltage and server module with fixed input voltage.

The COM-HPC® modules are available in following form factors:

- Size A 95 mm x 120 mm
- Size B 120 mm x 120 mm
- Size C 160 mm x 120 mm
- Side D 160 mm x 160 mm
- Side E 200 mm x 160 mm

Table 1 COM-HPC® Interface Summary

Features	Classification	Client Module Min/Max	Server Module Min/Max	Comment
Ethernet	NBASE-T	1 / 2	1 / 1	
	KR/KX	0 / 2	2 / 8	
SATA	-	0 / 2	0 / 2	
PCIe	Lane 0-47	4 / 48	8 / 48	
	Lane 48-63	N.A	0 / 16	
	BMC	0 / 1	1 / 1	
USB	USB 2.0 Ports 0-7	4 / 8	4 / 8	Ports 0-3 are used for USB 3.2 and USB 4 if implemented
	USB 3.2 Gen 1 or Gen 2	0 / 2	0 / 2	Requires one SuperSpeed Tx pair and one Rx pair per port
	USB 3.2 Gen 2x2	0 / 4	0 / 2	Requires two SuperSpeed Tx pairs and two Rx pairs per port
	USB 4.0	0 / 4	0 / 2	USB 4 ports use USB 3.2 Gen 2x2 ports
Display	DDI	1 / 3	N.A	Additional display outputs may be available on the USB 4 interface
	eDP	0 / 1	N.A	
MIPI	DSI	0 / 1	N.A	
	CSI	0 / 2	N.A	
Audio	Soundwire	0 / 1	N.A	
	I2S/2 nd Soundwire/HDA	0 / 1	N.A	
Asynchronous Serial Ports	-	0 / 2	1 / 2	
Connector	J1	1 / 1	1 / 1	
	J2	0 / 1	1 / 1	

1.2 The conga-HPC/sILL

The conga-HPC/sILL is a COM-HPC® server module with fixed input voltage. The module uses PCB Size D definition and it complies with COM-HPC® specification 1.1.

The conga-HPC/sILL is equipped with two high performance connectors that ensure stable data throughput, and support high bandwidth networking. It provides all the core functional requirements for any embedded application when mounted onto an application-specific carrier board.

The conga-HPC/sILL features the next generation Intel® Xeon D-1700 (Ice Lake-D LCC) processors with maximum base TDP of 67 W.

1.3 Options Information

The conga-HPC/sILL is currently available in five variants (two commercial and three industrial). The tables below show the different configurations available.

Table 2 Commercial Variants

Part-No.	050410	050411	
Processor	Intel® Xeon® D-1735TR 2.20 GHz 8 Cores	Intel® Xeon® D-1712TR 2.0 GHz 4 Cores	
Intel® Smart Cache	15 MB	10 MB	
Max. Turbo Frequency	3.40 GHz	3.10 GHz	
Processor Graphics	N.A	N.A	
DDR4 Memory (ECC or Non-ECC)	2933 MTps dual channel (up to 128 GB) ¹	2400 MTps dual channel (up to 128 GB) ¹	
Gigabit Ethernet	1x 40 G; 2x 25 G; 4x 10 G; 5x 10 G; 4x 10 G + 4x 1 G (maximum aggregate bandwidth is 50 Gbps) 1x 2.5 GbE		
PCIe Lanes	Gen 4	1x 2.5 GbE	16 lanes
	Gen 3	16 lanes	16 lanes
USB Ports	4x USB 3.0/2.0		4x USB 3.0/2.0
	4x USB 2.0		4x USB 2.0
SATA (6 Gbps)	2	2	
Processor TDP	59 W	40 W	
CPU Use Condition ²	Industrial	Industrial	
CPU Tcase	Min.	0°C	0°C
	Max.	82°C	84°C
CPU DTSmax	100°C	100°C	
CPU DTR ³	90°C or 145°C depending on the combined supported high speed ports		
Compatible Carrier Board	conga-HPC/EVAL-Server Evaluation Carrier Board		

**Note**

1. Up to 256 GB with RDIMMs and up to 128 GB with UDIMMs.
2. Intel SoC use conditions. See Intel documentation for more information.
3. DTR is 90°C if CPU PCIe 4.0, PCH PCIe 3.0 and SATA 3 ports are supported. DTR is 145°C if CPU PCIe 3.0, PCIe 2.0 and SATA 2 ports are supported (no CPU PCIe 4.0, PCH PCIe 3.0 or SATA 3 support).

Table 3 conga-HPC/sILL Industrial Variants

Part-No.	050400	050401	050402
Processor	Intel® Xeon® D-1746TER 2.0 GHz 10 Cores	Intel® Xeon® D-1732TE 1.9 GHz 8 Cores	Intel® Xeon® D-1715TER 2.4 GHz 4 Cores
Intel® Smart Cache	15 MB	15 MB	10 MB
Max. Turbo Frequency	3.10 GHz	3.0 GHz	3.5 GHz
Processor Graphics	N.A	N.A	N.A
DDR4 Memory (ECC or Non-ECC)	2666 MTps dual channel (up to 128 GB) ¹	2666 MTps dual channel (up to 128 GB) ¹	2666 MTps dual channel (up to 128 GB) ¹
Gigabit Ethernet	2 x 40 G; 2 x 25 G + 4x 10 G; 4x 25 G; 8 x 10 G (maximum aggregate bandwidth is 100 Gbps) 1x 2.5 GbE	1x 40 G; 2x 25 G; 4x 10 G; 5x 10 G; 4x 10 G + 4x 1 G (maximum aggregate bandwidth is 50 Gbps) 1x 2.5 GbE	
PCIe Lanes	Gen 4	16 lanes	16 lanes
	Gen 3	16 lanes	16 lanes
USB Ports	4x USB 3.0/2.0	4x USB 3.0/2.0	4x USB 3.0/2.0
	4x USB 2.0	4x USB 2.0	4x USB 2.0
SATA (6 Gbps)	2	2	2
Processor TDP	67 W	52 W	50 W
CPU Use Condition ²	Industrial	Industrial	Industrial
CPU Tcase	Min.	-40°C	-40°C
	Max.	85°C	78°C
CPU DTsmax	102°C	105°C	100°C
CPU DTR ³	90°C or 145°C depending on the combined supported high speed ports		
Compatible Carrier Board	conga-HPC/EVAL-Server Evaluation Carrier Board		

**Note**

1. Up to 256 GB with RDIMMs and up to 128 GB with UDIMMs.
2. Intel SoC use conditions. See Intel documentation for more information.
3. DTR is 90°C if CPU PCIe 4.0, PCH PCIe 3.0 and SATA 3 ports are supported. DTR is 145°C if CPU PCIe 3.0, PCIe 2.0 and SATA 2 ports are supported (no CPU PCIe 4.0, PCH PCIe 3.0 or SATA 3 support).

2 Specifications

2.1 Feature List

Table 4 Feature Summary

Form Factor	COM-HPC® Size D server module (160 mm x 160 mm)	
Processor	Intel® Xeon processor D-1700 product family SoC	
Chipset	Integrated in the SoC	
Memory	Four memory sockets. Supports <ul style="list-style-type: none">- DDR4 ECC and non-ECC DIMM modules- Dual channel (two DIMMs per channel)- Data rates up to 2933 MT/s with RDIMMs or up to 2666 MT/s with UDIMMs and VLP RDIMMs- Maximum 256 GB capacity (64 GB each) with RDIMM or 128 GB capacity (32 GB each) with UDIMM	
Ethernet	Gigabit Ethernet with support for: <ul style="list-style-type: none">- 1x 2500BASE-T standard interface (Intel i226 with TSN support)- 40 G², 25 G or 10 G (see section 1.3 “Options Information” for more information)	
Graphics	N.A	
Audio	N.A	
Peripheral Interfaces	4x USB 2.0 (up to 4x USB 3.0) 16x PCIe Gen. 4 lanes 16x PCIe Gen. 3 lanes 2x SATA® (6 Gbps) 2x UART (16C550 compatible)	12x GPIOs I ² C (fast mode, 400 KHz, multi-master) SMBus eSPI SPI
BIOS	AMI Aptio® V UEFI 2.x firmware 64 MB SPI with congatec Embedded BIOS features	
congatec Board Controller	Multi-stage watchdog, non-volatile user data storage, manufacturing and board information, board statistics, hardware monitoring, fan control, I ² C bus, Power loss control	
Onboard Storage	Optional eMMC 5.1 up to 512 GB (BOM option)	
Power Management	Supports: <ul style="list-style-type: none">- ACPI 5.0a compliant with battery support.- Hardware power management- System Sleep State Control and Deep Sx in S5 state- Wake events from the Intel Management Engine- S5e mode (see section 6.1.6 “Enhanced Soft-off State”)	
Security	Discrete Trusted Platform Module 2.0 (Infineon SLB9670AQ2.0); new AES Instructions for faster and better encryption.	

¹ See section 7.3 “Memory Population Rules” for more information.

² 40G requires the use of four lanes and it is only supported in backplane mode.

2.2 Supported Operating Systems

The conga-HPC/sILL supports the following operating systems.

- Microsoft® Windows® 10 IoT Enterprise LTS (1809)
- Microsoft Windows Server 2019 (1809)
- Linux (Ubuntu 20.04.1 LTS kernel 5.13)
- Yocto Project
- Real Time Systems Hypervisor

Note

For better system performance, use only 64-bit Operating Systems.

2.3 Mechanical Dimensions

The conga-HPC/sILL has the following dimensions:

- length of 160 mm
- width of 160 mm
- height of 26.66 mm (21 mm top side (DIMM sockets), 2 mm PCB and 3.66 mm bottom side)

The overall height specified for a COM-HPC® size D assembly (carrier board PCB, module PCB and heatspreader) is shown below:

2.4 Supply Voltage Standard Power

12 V DC \pm 5 %

2.4.1 Electrical Characteristics

Power supply pins on the module's connectors limit the amount of input power. The following table provides an overview of the limitations for the conga-HPC/sILL (COM-HPC® server module with fixed input voltage).

Power Rail	Module Pin Current Capability 20% Derated (A)	Input Range (V)	Minimum Input (V)	Max. Module Input Power at Minimum Input Voltage (W)	Assumed Conversion Efficiency	Max. Module Load Power at Minimum Input Voltage (Watts)
VCC_12V	$28 * 1.12 = 31.4$	$12 \pm 5\%$	11.4	358	85%	304
VCC_5V_SBY	1.12	4.75 - 5.25	4.75	5.32	100%	5.3 (with one VCC_5V_SBY pin) 10.6 (with two VCC_5V_SBY pin)
VCC_RTC	1.12	2.3 - 3.3	2.3			

2.4.2 Rise Time

The input voltages shall rise from 10 percent of nominal to 90 percent of nominal at a minimum slope of 250 V/s. The smooth turn-on requires that during the 10 percent to 90 percent portion of the rise time, the slope of the turn-on waveform must be positive.

2.5 Power Consumption

The power consumption values were measured with the following setup:

- input voltage +12 V
- conga-HPC/sILL COM
- modified congatec carrier board
- conga-HPC/sILL cooling solution
- Microsoft Windows 10 (64 bit)

Note

The CPU was stressed to its maximum workload.

Table 5 Measurement Description

The power consumption values were recorded during the following system states:

System State	Description	Comment
S0: Minimum value	Lowest frequency mode (LFM) with minimum core voltage during desktop idle	
S0: Maximum value	Highest frequency mode (HFM/Turbo Boost).	The CPU was stressed to its maximum frequency
S0: Peak current	Highest current spike during the measurement of "S0: Maximum value". This state shows the peak value during runtime	Consider this value when designing the system's power supply to ensure that sufficient power is supplied during worst case scenarios
S3	COM is powered by VCC_5V_SBY	
S5	COM is powered by VCC_5V_SBY	
S5e	COM is powered by VCC_5V_SBY	

Note

1. *The fan and SATA drives were powered externally.*
2. *All other peripherals except the LCD monitor were disconnected before measurement.*

Table 6 Power Consumption Values

The table below provides additional information about the conga-HPC/sILL power consumption. The values were recorded at various operating mode.

Part No.	Memory Size	H.W Rev.	BIOS Rev.	OS (64 bit)	CPU			Current (A)					
					Variant	Cores	Freq. /Max. Turbo	S0: Min	S0: Max	S0: Peak	S3	S5	S5e
050410	4 x 16 GB	A.2	HSILR118	Windows 10	Intel® Xeon® D-1735TR	8	2.2 / 3.4 GHz	1.80	6.28	7.12	N.A	1.07	0.001
050411	4 x 16 GB	A.2	HSILR016	Windows 10	Intel® Xeon® D-1712TR	4	2.0 / 3.1 GHz	1.67	4.42	4.90	N.A	0.98	0.001
050400	4 x 16 GB	A.3	HSILR118	Windows 10	Intel® Xeon® D-1746TER	10	2.0 / 3.1 GHz	1.78	6.94	7.84	N.A	1.12	0.001
050401	4 x 16 GB	A.2	HSILR118	Windows 10	Intel® Xeon® D-1732TE	8	1.9 / 3.0 GHz	1.73	5.59	6.23	N.A	1.05	0.001
050402	4 x 16 GB	A.3	HSILR016	Windows 10	Intel® Xeon® D-1715TER	4	2.4 / 3.5 GHz	1.79	5.36	6.05	N.A	1.08	0.001

2.6 Supply Voltage Battery Power

Table 7 CMOS Battery Power Consumption (Commercial Variant)

RTC (Measured with PN:050410)	Voltage	Current
-10°C	3 V DC	1.56 µA
20°C	3 V DC	1.74 µA
70°C	3 V DC	6.89 µA

Table 8 CMOS Battery Power Consumption (Industrial Variant)

RTC (Measured with PN:050400)	Voltage	Current
-50°C	3 V DC	1.37 µA
20°C	3 V DC	1.81 µA
95°C	3 V DC	6.06 µA

- Note**
1. Do not use the CMOS battery power consumption values listed above to calculate CMOS battery lifetime.
 2. Measure the CMOS battery power consumption of your application in worst case conditions (for example, during high temperature and high battery voltage).

3. Consider the self-discharge of the battery when calculating the lifetime of the CMOS battery. For more information, refer to application note AN9_RTC_Battery_Lifetime.pdf on congatec GmbH website at www.congatec.com/support/application-notes.

4. We recommend always having a CMOS battery present when operating the conga-HPC/sILL.

2.7 Environmental Specifications

Temperature	Operation: 0° to 60°C	Storage: -20° to 85°C	(commercial variants)
Temperature	Operation: -40° to 85°C	Storage: -40° to 85°C	(industrial variants)
Humidity	Operation: 10% to 90%	Storage: 5% to 95%	

Caution

The above operating temperatures must be strictly adhered to at all times. When using a congatec heatspreader, the maximum operating temperature refers to any measurable spot on the heatspreader's surface.

Humidity specifications are for non-condensing conditions.

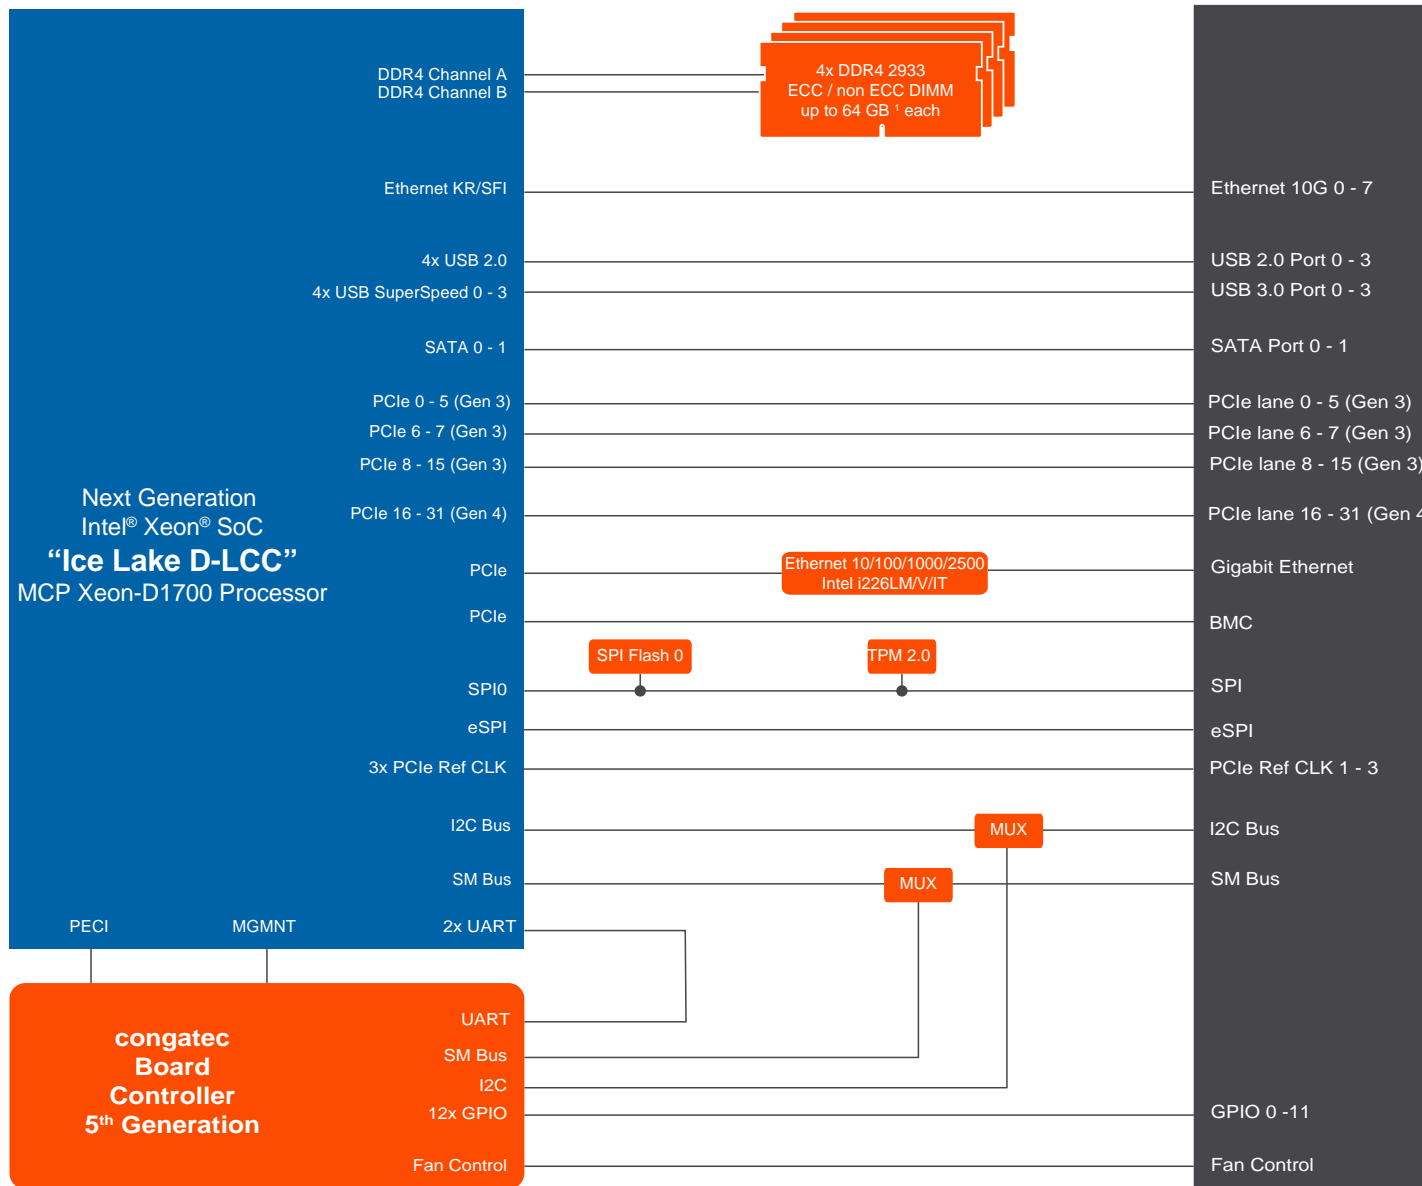

Note

For long term storage of the conga-HPC/sILL (more than six months), keep the conga-HPC/sILL in a climate-controlled building at a constant temperature between 5°C and 40°C, with humidity of less than 65% and at an altitude of less than 3000 m. Also ensure the storage location is dry and well ventilated.

We do not recommend storing the conga-HPC/sILL for more than five years under these conditions.

3 Block Diagram

¹ Maximum 256 GB capacity (64 GB each) with RDIMMs or 128 GB capacity (32 GB) with UDIMMs

4 Cooling Solutions

congatec GmbH offers the following cooling solutions for the conga-HPC/sILL. The dimensions of the cooling solutions are shown in the sub-sections. All measurements are in millimeters.

Table 9 Cooling Solution Variants and Accessories

	Cooling Solution	Part No	Description
1	CSA	050450	Active cooling solution with integrated heat pipes, 12 V fan and overall height of 35.2 mm
2	CSP	050451	Passive cooling solution with integrated heat pipes and overall height of 18.2 mm
3	HSP	050452	Heatspreader with integrated heat pipes, 2.7 mm bore-hole standoffs and overall height of 11 mm
		050453	Heatspreader with integrated heat pipes, M2.5 mm threaded standoffs and overall height of 11 mm
4	HPA	050454	Heat pipe adapter suitable for standard 8 mm heat pipe for optimal heat distribution
5	Retention frame	050455	Retention frame for the conga-HPC/sILL.

Note

1. We recommend a maximum torque of 0.4 Nm for carrier board mounting screws and 0.5 Nm for module mounting screws.
2. The gap pad material used on congatec heatspreaders may contain silicon oil that can seep out over time depending on the environmental conditions it is subjected to. For more information about this subject, contact your local congatec sales representative and request the gap pad material manufacturer's specification.
3. For optimal thermal dissipation, do not store the congatec cooling solutions for more than six months.

Caution

1. The congatec heatspreaders/cooling solutions are tested only within the commercial temperature range of 0° to 60°C. If your application that features a congatec heatspreader/cooling solution operates outside this temperature range, ensure the correct operating temperature of the module is maintained at all times. This may require additional cooling components for your final application's thermal solution.
2. For adequate heat dissipation, use the mounting holes on the cooling solution to attach it to the module. Apply thread-locking fluid on the screws if the cooling solution is used in a high shock and/or vibration environment. To prevent the standoff from stripping or cross-threading, use non-threaded carrier board standoffs to mount threaded cooling solutions.
3. For applications that require vertically-mounted cooling solution, use only coolers that secure the thermal stacks with fixing post. Without the fixing post feature, the thermal stacks may move.
4. Do not exceed the recommended maximum torque. Doing so may damage the module or the carrier board, or both.

4.2 CSP Dimensions

4.3 HSP Dimensions

- M2.5 threaded standoff for threaded version
 or
 ø2.7 non-threaded standoff for borehole version

4.4 HPA Dimensions

5 Connector Rows

The conga-HPC/sILL is connected to the carrier board via two 400-pin connectors (COM-HPC® server module pinout). These connectors are broken down into eight rows. The primary connector J1 consists of rows A, B, C, and D. The secondary connector J2 consists of rows E, F, G, and H. The following subsystems can be found on these connector rows.

5.1 PCI Express (PCIe)

The conga-HPC/sILL offers the following PCIe lanes:

- up to 16 PCIe Gen 3 lanes via the chipset
- up to 16 PCIe Gen 4 lanes via the SoC

For the PCH PCIe Spread Spectrum Clocking, navigate to the following BIOS setup menu:

Platform Configuration -> PCH-I/O Configuration -> Pcie PLL SSC

For the CPU PCIe Spread Spectrum Clocking, navigate to the following BIOS setup menu:

Platform Configuration -> Miscellaneous Configuration -> SSC Enable For Host

5.1.1 PCIe Gen 3

The conga-HPC/sILL offers up to 16 PCIe 3.0 lanes via the chipset. The PCIe interface supports:

- up to 8 GT/s (Gen 3) speed
- a 1 x8 and 2 x4 link configuration by default ¹
- a 2 x8 or 4 x4 or 8 x1 link configuration with custom BIOS
- maximum of eight root ports
- lane polarity inversion
- lane reversal

Note

¹ The maximum combined HSIO bandwidth (PCIe 3.0 (PCH), USB and SATA) is 16 GB/s.

5.1.2 PCIe Gen 4

The conga-HPC/sILL offers a 16-lane PCIe Gen 4.0 port (PEG x16) via the SoC. The lanes support:

- PCI Express Specification 4.0, with up to 16 GT/s
- a 4 x4, 2 x4 + 1 x8, 1 x8 + 2 x4, 2 x8 or 1 x16 (default) link configuration via the BIOS setup menu
- a x4 minimum link width
- maximum of four root ports
- graphics or non-graphics PCIe devices
- lane polarity inversion
- lane reversal

Note

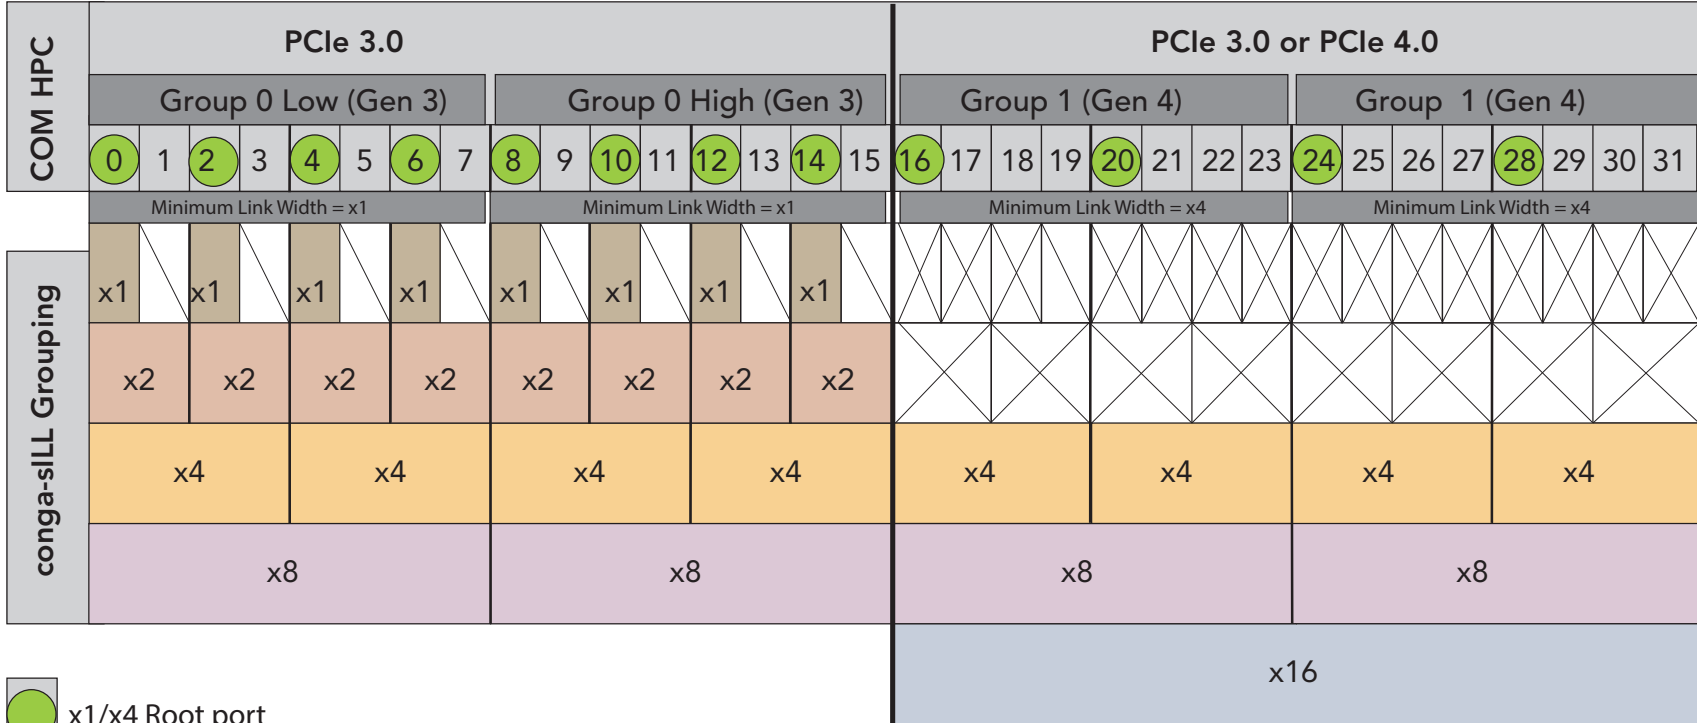

1. The PCIe x4 port does not support bifurcation.
2. You can configure PCIe x16 port for multiple devices at narrower widths.
3. The Gen 4 lanes can not be linked together with PCIe Gen 3 lanes.

5.1.3 PCIe Link Configuration

The possible link configurations are listed in the table below.

Table 10 PCIe Link

PCIe Lane	PCIe Generation	Link Configuration		COM-HPC® Grouping	Source	Comment
		Default	Optional			
PCIe 00 - 03	Gen 3	1 x8	2 x4,	Group 0 Low	Chipset	
PCIe 04 - 07	Gen 3		4 x1		Chipset	
PCIe 08 - 11	Gen 3	1 x4	1 x8, 4 x1	Group 0 High	Chipset	
PCIe 12 - 15	Gen 3	1 x4			Chipset	
PCIe 16 - 31	Gen 4	x16	4 x4, 2 x 8, 2 x4 + 1 x8	Group 1	CPU	PEG port

-  x1/x4 Root port
-  Not available if the corresponding x1 link is used
-  Not available

 **Note**

The minimum width link for Group 1 is x4 link. If you use a x1 or a x2 link in Group 1, the remaining lanes that make up the x4 link will not be available.

5.2 NBASE-T Ethernet

The conga-HPC/sILL offers a 2.5 Gigabit Ethernet interface via an onboard Intel® i226-LM/V/IT controller. The interface supports:

- full-duplex operation at 10/100/1000/2500 Mbps
- half-duplex operation at 10/100 Mbps

The table below describes the LED operation.

Table 11 2.5 Gb Ethernet LED Description

LED Left Side	LED Right Side	Description
Off	Off	No link
Off	Green (blinking)	10 Mbps or 100 Mbps link established
Green	Green (blinking)	1 Gbps link established
Yellow	Green (blinking)	2.5 Gbps link established

5.3 Ethernet KR/KX and Related Standards

The conga-HPC/sILL Ethernet KR/KX interface supports the following features:

- Up to 100 Gbps for processors with 10 cores
- Up to 50 Gbps for processors with 4-8 cores
- 40GBASE-KR4, 25GBASE-KR-S/KR1, 25G-KR-S or 10GBASE-KR for backplane applications (default configuration)
- 25GBASE-SR/LR, 25G-SFI-ACC/AOC, 25GBASE-CR/CR1/CR-S for SFP application ^{1,2}
- 10G-SFI-DA, 10GBASE-SR/LR or 10G-SFI-ACC/AOC for SFP application ^{1,2}
- 10GBASE-T with Intel Coppersvale X557-AT4

Note

- ¹ The Ethernet GbE PHY must be implemented on the carrier board.
- ² For better signal integrity, we recommend to implement an external PHY or retimer on the carrier board (for example, the Intel Parkvale C827-AM/C827-IM for SFP application).

5.3.1 Possible Ethernet Configurations

The table below lists the KR/KX Ethernet configurations possible on the conga-HPC/sILL with standard NVM image.

Table 12 Supported Ethernet Configurations

Intel HW Config ID	Medium	Interface	Possible Link Modes	Rate	100-G CPU Maximum Combinations	50-G CPU Maximum Combinations	Comment
CFG 7.0 ^{1,2,3} (default)	Parkvale C827-AM	4x SFP28	25GBASE-SR/LR	25 Gb	4x 25 G	2x 25 G	Full CEI support.
			25G-SFI-ACC/AOC				
			25GBASE-CR/CR1/CR-S				
		4x SFP+	10G-SFI-DA	10 Gb	4x 10 G;	4x 10 G	
			10GBASE-SR/LR				
			10G-SFI-ACC/AOC				
	8x SFP+	10G-SFI-DA	10 Gb	8x 10 G	4x 10 G + 4x 1 G		
		10GBASE-SR/LR					
		10G-SFI-ACC/AOC					
Coppervale X557-AT4	4x 10GBASE-T	10GBASE-T	10 Gb	4x 10 G	4x 10 G		
	8x 10GBASE-T	10GBASE-T	10 Gb	8x 10 G			
Marwell 88E1543	4x 1000BASE-T	1000BASE-T	1 Gb	4x 1 G	4x 1 G		
	8x 1000BASE-T	1000BASE-T	1 Gb	8x 1 G			
CFG 7.6 ^{1,3}	Backplane	10GBASE-KR	10GBASE-KR	10 Gb	8x 10 G	4x 10 G 5x 10 G 4x 10 G + 4x 2.5 G	40 G requires the use of four lanes. Note: Requires BIOS update and corresponding NVM image.
		25GBASE-KR4	25GBASE-KR4	25 Gb	4x 25 G 2x 25 G + 4x 10 G	2x 25 G	
		40GBASE-KR4	40GBASE-KR4	40 Gb	2x 40 G	1x 40 G	
CFG 7.7 ^{1,3}	Native SFI	4x SFP+, 6x SFP+ or 8x SFP+	25G-SFI-ACC/AOC	25 Gb	4x 25 G; 2x 25 G + 4x 10 G	2x 25 G	With I/O expander (leveraging the CEI concept without a PHY on the carrier board). Note: Requires BIOS update and corresponding NVM image.
			10G-SFI-DA	10 Gb	8x 10 G;	4x 10 G 4x 10 G + 4x 1 G	
			10G-SFI-ACC/AOC (SR/LR)				
CFG 7.9 ^{1,3}	Backplane/Native SFI	6x SFP+	25G-SFI-ACC/AOC		2x 25 G + 4x 10 G		With I/O expander (leveraging the CEI concept without a PHY on the carrier board). Note: Requires BIOS update and corresponding NVM image.
		8x SFP+	10G-SFI-DA	10 Gb	8x 10 G	4x 10 G + 4x 1 G	
			10GBASE-SR/LR				
			10G-SFI-ACC/AOC				

¹. Appropriate NVM image must be used. For instructions on how to deploy LAN NVM and PHY NVM images, refer to congatec CTN 20180726 001 document in the restricted area of our website.

-
- To change from the default configuration CFG 7.0 to CFG 7.6 or CFG 7.7, you need a customized conga-HPC/sILL, BIOS update and a corresponding NVMe image. For more information, contact your sales representative.*
 - Lower speeds are supported*

5.4 SATA

The conga-HPC/sILL offers two SATA interfaces (SATA 0-1) on J1 connector. The interfaces support:

- independent DMA operation
- SATA specification 3.2
- data transfer rates up to 6.0 Gb/s
- AHCI mode using memory space
- Hot-plug detect

Note

- The interfaces do not support legacy mode using I/O space. Therefore, you need an AHCI driver.*
- RAID is not supported.*
- The maximum combined HSIO bandwidth (PCIe 3.0 (PCH), USB and SATA) is 16 GB/s.*

5.5 USB

The conga-HPC/sILL offers four USB 2.0 interfaces and up to four SuperSpeed signals on J1 connector. You can combine each USB 2.0 port with corresponding USB SuperSpeed signals to create USB 3.1 Gen 1 port.

The xHCI host controller supports:

- USB 3.1 specification
- SuperSpeedPlus, SuperSpeed, High-Speed, Full-Speed and Low-Speed USB signaling
- data transfers ¹ up to 5 Gbps for USB 3.1 Gen 1 port

Note

- The maximum combined HSIO bandwidth (PCIe 3.0 (PCH), USB and SATA) is 16 GB/s.*

5.6 UART

The conga-HPC/sILL offers two standard UART interfaces via the congatec Board Controller. These interfaces comply with UART 16550 and 16750 protocol. They support up to 115200 bps and can operate in low-speed, full-speed and high-speed modes.

Optionally, the UARTs can be connected to the Intel Ice Lake-D SoC.

5.7 GPIOs

The conga-HPC/sILL offers 12 General Purpose Input/Output signals for custom designs. The GPIOs are controlled by the congatec Board controller.

5.8 General Purpose SPI

The conga-HPC/sILL offers a general purpose SPI interface via the congatec Board Controller. The interface offers up to two chip select pins.

5.9 eSPI

The conga-HPC/sILL offers an eSPI interface for general purpose carrier board devices such as Super I/O, FPGAs, CPLDs and so on. The interface offers one chip select pin for carrier board device.

Unlike the LPC interface, the eSPI interface runs from a 1.8 V supply.

5.10 Boot SPI

The conga-HPC/sILL offers a Boot SPI interface for carrier-based SPI BIOS flash device. The congatec onboard flash device (Winbond W25Q512JVEIQ (512 Mb)) and TPM device are also connected to the Boot SPI interface.

The boot select configuration pins to select the carrier board flash device are described in section 5.11 “BIOS Flash Selection”.

Note

1. The power supply to the carrier board SPI (`VCC_BOOT_SPI`) is 3.3 V.
2. The onboard SPI flash is disabled when the carrier board SPI flash is enabled.

5.11 BIOS Flash Selection

The boot select pins BSEL0-BSEL2 are configured to load the firmware BIOS from the conga-HPC/sILL by default. Optionally, you can configure these pins to load the boot firmware from the carrier board flash as described in the table below.

Table 13 BIOS Select Options

BSEL2	BSEL1	BSEL0	Boot Option
1	1	1	Boot from module SPI flash (default)
1	1	0	Boot from carrier board SPI flash

5.12 I²C

The conga-HPC/sILL offers two I²C interfaces (I2C0 and I2C1) via the congatec Board Controller. The cBC provides a fast-mode multi-master I²C bus that has the maximum I²C bandwidth.

Table 14 Reserved I²C Addresses

8-bit Device Address	7-bit Device Address	Device	Description
0xA0	0x24	IPMI EEPROM	Reserved for IPMI
0x14, 0x16	0x0A, 0x0B	congatec Board Controller	Reserved for battery management
0x48	0x24	Carrier board IO expander	Reserved for carrier board IO Expander only if the conga-HPC/sILL module is attached to congatec conga-HPC/EVAL-Server carrier board
0xAE	0x57	Carrier board EEPROM	Reserved for carrier board EEPROM only if the conga-HPC/sILL module is attached to congatec conga-HPC/EVAL-Server carrier board

Note

1. You need the congatec CGOS driver and API to access the I²C interface.
2. Onboard resources are not connected to the I²C bus.

5.13 SMBus

The conga-HPC/sILL offers the System Management Bus (SMBus) via the congatec Board Controller by default. Optionally, you can route the SMBus signals from the SoC instead by configuring the routing options in the BIOS setup menu.

Table 15 Reserved SMBus Addresses

8-bit Device Address	7-bit Device Address	Device	Description
0xD6, 0xD8, 0xDA	0x6B, 0x6C, 0x6D	Carrier board PCIe clock buffer	Reserved for PCIe clock buffer on the COM-HPC carrier board
0xD4	0x6A	PCIe clock generator	Reserved only if SMBus isolation is not active
0x2E	0x17	CPLD debug address	Reserved only if SMBus isolation is not active
0x14, 0x16	0x0A, 0x0B	congatec Board Controller	Reserved for battery management
0x10, 0x88	0x08, 0x44	Chipset	Reserved only if SMBus isolation is not active

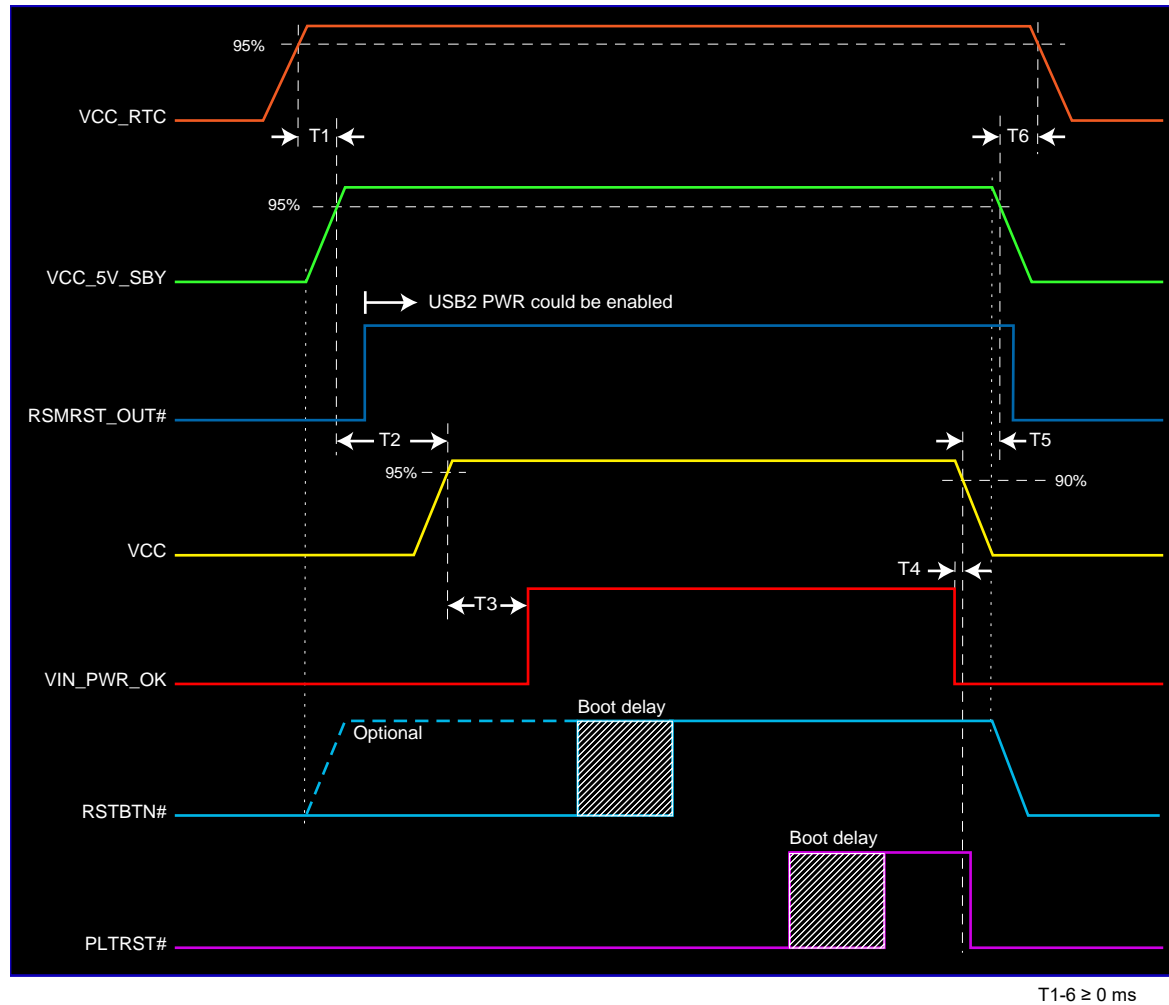

Note

Make sure the address space of the carrier board SMBus devices does not overlap the address space of the module devices. For more information, refer to the COM-HPC® Module Base Specification and Carrier Design Guide.

5.14 Power Control

The conga-HPC/sILL operates with 12 V input voltage range. Its power-up sequence is illustrated below:

The power control signals VIN_PWROK, RSTBTN#, SUS_S3#, and PWRBTN# are described below. For more information, refer to the COM-HPC® Module Base Specification.

VIN_PWROK

Power OK from main power supply or carrier board voltage regulator circuitry. A high value indicates that the power is good and the module can start its onboard power sequencing. Carrier board hardware should not drive VIN_PWROK low after the input power is stable. Hold RSTBTN# low instead to keep the module in a reset condition if necessary.

Note

Due to the timing requirement of Intel Ice Lake-D SoC, VIN_PWROK signal must be active within 100 ms of SUS_S4_S5# deassertion.

SUS_S3#

The SUS_S3# signal is an active-low output that can be used to turn on the main outputs of an ATX-style power supply. To accomplish this, invert the signal on the carrier board with an inverter or transistor that is supplied by standby voltage.

With SUS_S3#, the conga-HPC/sILL can control ATX-style power supplies.

Note

- 1. If you do not use an ATX power supply, do not connect the conga-HPC/sILL pins SUS_S3#, VCC_5V_SBY and PWRBTN#.*
- 2. The Intel SoC does not support the S3 sleep state.*

PWRBTN#

When using ATX-style power supplies, PWRBTN# is used to connect to a momentary-contact, active-low debounced push-button input while the other terminal on the push-button must be connected to ground. This signal is internally pulled up to 3V_SB using a 100 k Ω resistor. When PWRBTN# is asserted it indicates that an operator wants to turn the power on or off.

The response to this signal from the system may vary as a result of modifications made in BIOS settings or by system software.

5.14.1 Power Management

ACPI

The conga-HPC/sILL supports Advanced Configuration and Power Interface (ACPI) specification, revision 5.0a. For more information, see section 7.2 “ACPI Suspend Modes and Resume Events”.

DEEP Sx

The Deep Sx is a lower power state employed to minimize the power consumption in Intel Ice Lake SoC while in S5. In the Deep Sx state, the system entry condition determines if the system context is maintained or not. All power is shut off except for minimal logic which supports limited set of wake events for Deep Sx.

The Deep Sx on resumption, puts system back into the state it is entered from. In other words, if Deep Sx state was entered from S5 state, then the resume path will place system back into S5.

The Intel Ice Lake SoC supports Deep Sx only in S5 state.

S5e Power State

The conga-HPC/sILL features a congatec proprietary Enhanced Soft-Off power state. See section 6.1.6 “Enhanced Soft-off State” for more information.

6 Additional Features

6.1 congatec Board Controller (cBC)

The conga-HPC/sILL is equipped with Microchip MEC1706 microcontroller. This onboard microcontroller plays an important role for most of the congatec embedded/industrial PC features. It fully isolates some of the embedded features such as system monitoring or the I²C bus from the x86 core architecture, which results in higher embedded feature performance and more reliability, even when the x86 processor is in a low power mode. It also ensures that the congatec embedded feature set is fully compatible amongst all congatec modules.

The board controller supports the following features:

- Board information
- Watchdog
- General Purpose Input/Output (see section 5.7 "GPIOs")
- I²C bus (see section 5.12 "I2C")
- SMBus (see section 5.13 "SMBus")
- UART (see section 5.6 "UART")
- General Purpose SPI (see section 5.8 "General Purpose SPI")
- Port 80 debug information over USB power delivery pins
- Power loss control
- Fan control
- Enhanced soft-off state (S5e)
- User EEPROM space

6.1.1 Board Information

The cBC provides a rich data-set of manufacturing and board information such as serial number, EAN number, hardware and firmware revisions, and so on. It also keeps track of dynamically changing data like runtime meter and boot counter.

6.1.2 Watchdog

The conga-HPC/sILL is equipped with a multi stage watchdog solution that is triggered by software. For more information about the Watchdog feature, see the application note AN3_Watchdog.pdf on the congatec GmbH website at www.congatec.com.

Note

The conga-HPC/sILL module does not support watchdog NMI mode.

6.1.3 Port 80 Debug Information

The conga-HPC/sILL board controller offers BIOS Port 80h debug information over the USB Power Delivery I²C Bus (USB_PD_I2C_DAT and USB_PD_I2C_CLK). The debug information is serialized and must be deserialized on the carrier board.

For information on how to deserialize and display the debug information on carrier board 7-segment displays, refer to the COM-HPC® Carrier Design Guide.

6.1.4 Fan Control

The conga-HPC/sILL has additional signals and functions to further improve system management. One of these signals is an output signal called FAN_PWMOUT that allows system fan control using a PWM (Pulse Width Modulation) output. Additionally, there is an input signal called FAN_TACHOIN that provides the ability to monitor the system's fan RPMs (revolutions per minute). This signal must receive two pulses per revolution in order to produce an accurate reading. For this reason, a two pulse per revolution fan or similar hardware solution is recommended.

Note

1. *A four wire fan must be used to generate the correct speed readout.*
2. *For the correct fan control (FAN_PWMOUT, FAN_TACHIN) implementation, see the COM-HPC® Design Guide.*

6.1.5 Power Loss Control

The cBC provides the power loss control feature. The power loss control feature determines the behaviour of the system after an AC power loss occurs. This feature applies to systems with ATX-style power supplies which support standby power rail.

The term “power loss” implies that all power sources, including the standby power are lost (G3 state). Once power loss (transition to G3) or shutdown (transition to S5) occurs, the board controller continuously monitors the standby power rail. If the standby voltage remains stable for 30 seconds, the cBC assumes the system was switched off properly. If the standby voltage is no longer detected within 30 seconds, the module considers this an AC power loss condition.

The power loss control feature has three different modes that define how the system responds when standby power is restored after a power loss occurs. The modes are:

- Turn On: The system is turned on after a power loss condition
- Remain Off: The system is kept off after a power loss condition
- Last State: The board controller restores the last state of the system before the power loss condition

- Note**
1. If a power loss condition occurs within 30 seconds after a regular shutdown, the cBC may incorrectly set the last state to “ON”.
 2. The settings for power loss control have no effect on systems with AT-style power supplies which do not support standby power rail.
 3. The 30 seconds monitoring cycle applies only to the “Last State” power loss control mode.

6.1.6 Enhanced Soft-off State

The conga-HPC/sILL supports an enhanced Soft-Off state (S5e)—a congatec proprietary low-power Soft-Off state. In this state, the CPU module switches off almost all the onboard logic in order to reduce the power consumption to absolute minimum (between 0.05 mA and 0.09 mA).

The S5e supports power button, sleep button and SMBALERT# wake events. Refer to congatec application note AN36_S5e_Implementation.pdf for detailed description of the S5e state.

6.2 OEM BIOS Customization

The conga-HPC/sILL is equipped with congatec Embedded BIOS, which is based on American Megatrends Inc. Aptio UEFI firmware. The congatec Embedded BIOS allows system designers to modify the BIOS. For more information about customizing the congatec Embedded BIOS, refer to the congatec System Utility user's guide CGUTLm1x.pdf on the congatec website at www.congatec.com or contact technical support.

The customization features supported are described below.

6.2.1 OEM Default Settings

This feature allows system designers to create and store their own BIOS default configuration. Customized BIOS development by congatec for OEM default settings is no longer necessary because customers can easily perform this configuration by themselves using the congatec system utility CGUTIL. See congatec application note AN8_Create_OEM_Default_Map.pdf on the congatec website for details on how to add OEM default settings to the congatec Embedded BIOS.

6.2.2 OEM Boot Logo

This feature allows system designers to replace the standard text output displayed during POST with their own BIOS boot logo. Customized BIOS development by congatec for OEM Boot Logo is no longer necessary because customers can easily perform this configuration by themselves using the congatec system utility CGUTIL. See congatec application note AN11_Create_And_Add_Bootlogo.pdf on the congatec website for details on how to add OEM boot logo to the congatec Embedded BIOS.

6.2.3 OEM POST Logo

This feature allows system designers to replace the congatec POST logo displayed in the upper left corner of the screen during BIOS POST with their own BIOS POST logo. Use the congatec system utility CGUTIL 1.5.4 or later to replace/add the OEM POST logo.

6.2.4 OEM DXE Driver

This feature allows designers to add their own UEFI DXE driver to the congatec embedded BIOS. Contact congatec technical support for more information on how to add an OEM DXE driver.

6.3 congatec Battery Management Interface

To facilitate the development of battery powered mobile systems based on embedded modules, congatec GmbH defined an interface for the exchange of data between a CPU module (using an ACPI operating system) and a Smart Battery system. A system developed according to the congatec Battery Management Interface Specification can provide the battery management functions supported by an ACPI capable operating system (for example, charge state of the battery, information about the battery, alarms/events for certain battery states and so on) without the need for additional modifications to the system BIOS. In addition to the ACPI-Compliant Control Method Battery mentioned above, the latest versions of the conga-HPC/sILL BIOS and board controller firmware also support LTC1760 battery manager from Linear Technology and a battery-only solution (no charger). All three battery solutions are supported on the I²C bus and the SMBus. This gives the system designer more flexibility when choosing the appropriate battery sub-system.

For more information about the supported Battery Management Interface, contact your local sales representative.

6.4 API Support (CGOS)

To benefit from the above mentioned non-industry standard feature set, congatec provides an API that allows application software developers to easily integrate all these features into their code. The CGOS API (congatec Operating System Application Programming Interface) is the congatec proprietary API that is available for all commonly used Operating Systems such as Win32, Win64, Win CE, Linux. The architecture of the CGOS API driver provides the ability to write application software that runs unmodified on all congatec CPU modules. All the hardware related code is contained within the congatec embedded BIOS on the module. See section 1.1 of the CGOS API software developers guide, available on the congatec website.

6.5 Security Features

The conga-HPC/sILL offers offers a discrete SPI TPM 2.0 (Infineon SLB9670VQ2.0) by default.

6.6 Suspend to Ram/Disk

The Suspend to RAM and Suspend to Disk states are not supported on the conga-HPC/sILL.

7 conga Tech Notes

The Intel Ice Lake D-LCC SoC supports the following core features:

- Virtual and physical address space of 48 bits
- Intel 64 architecture with support for IA-32 instruction set
- Instruction Set Architecture (ISA) enhancements accelerating producer-consumer communication
- Intel Streaming SIMD Extensions 4.1 and 4.2 (SSE4.1 and SSE4.2)
- Intel Advanced Vector Extensions 512 (Intel AVX-512)

7.1 Intel® Ice Lake D-LCC Technologies

This section describes some of the technological features the Intel Ice Lake D-LCC supports.

7.1.1 Adaptive Thermal Monitor and Catastrophic Thermal Protection

Intel® Xeon processors have a thermal monitor feature that helps to control the processor's temperature. The integrated TCC (Thermal Control Circuit) activates if the processor silicon reaches its maximum operating temperature. The activation temperature that the Intel® Thermal Monitor uses to activate the TCC can be slightly modified via TCC Activation Offset in BIOS setup submenu "CPU submenu".

The Adaptive Thermal Monitor controls the processor temperature using two methods:

- Adjusting the processor's operating frequency and core voltage (EIST transitions)
- Modulating (start or stop) the processor's internal clocks at a duty cycle of 25% on and 75% off

When activated, the TCC causes the processor core to reduce frequency and voltage adaptively. The Adaptive Thermal Monitor will remain active as long as the package temperature remains at its specified limit. Therefore, the Adaptive Thermal Monitor will continue to reduce the package frequency and voltage until the TCC is de-activated. Clock modulation is activated if frequency and voltage adjustments are insufficient. Additional hardware, software drivers, or operating system support is not required.

Note

1. *Use a properly designed thermal solution for adequate heat dissipation. This solution ensures the TCC is active for only short periods of time, thus reducing the impact on processor performance to a minimum. The Intel® Xeon processor's respective datasheet can provide you with more information about this subject.*
2. *To enable THERMTRIP# to switch off the system automatically, use an ATX style power supply.*

7.1.2 Intel SpeedStep Technology (EIST)

Intel® processors on the conga-HPC/sILL run at different voltage/frequency states (performance states), referred to as Enhanced Intel® SpeedStep® Technology (EIST). Operating systems that support performance control take advantage of microprocessors that use several different performance states in order to efficiently operate the processor when it is not being fully used.

The operating system will determine the necessary performance state that the processor should run at so that the optimal balance between performance and power consumption can be achieved during runtime. The Windows family of operating systems links its processor performance control policy to the power scheme setting. You must ensure that the power scheme setting you choose has the ability to support Enhanced Intel® SpeedStep® technology.

The 11th Generation Intel® Core™ processor family supports Intel Speed Shift, a new and energy efficient method for frequency control. This feature is also referred to as Hardware-controlled Performance States (HWP). It is a hardware implementation of the ACPI defined Collaborative Processor Performance Control (CPPC2) and is supported by newer operating systems (Win 8.1 or newer).

With this feature enabled, the processor autonomously selects performance states based on workload demand and thermal limits while also considering information provided by the Operating System (for example, the performance limits and workload history).

7.1.3 Intel® Turbo Boost Technology

Intel® Turbo Boost Technology allows processor cores to run faster than the base operating frequency if it's operating below power, current, and temperature specification limits. Intel® Turbo Boost Technology is activated when the Operating System (OS) requests the highest processor performance state. The maximum frequency of Intel® Turbo Boost Technology is dependent on the number of active cores. The amount of time the processor spends in the Intel Turbo Boost 2 Technology state depends on the workload and operating environment. Any of the following can set the upper limit of Intel® Turbo Boost Technology on a given workload:

- Number of active cores
- Estimated current consumption
- Estimated power consumption
- Processor temperature

When the processor is operating below these limits and the user's workload demands additional performance, the processor frequency will dynamically increase by 100 MHz on short and regular intervals until the upper limit is met or the maximum possible upside for the number of active cores is reached. For more information about Intel® Turbo Boost 2 Technology visit the Intel® website.

Note

Refer to section 2.5 "Power Consumption" for information about the maximum turbo frequency available for each conga-HPC/sILL variant.

7.1.4 Intel® Virtualization Technology

Intel® Virtualization Technology (Intel® VT) makes a single system appear as multiple independent systems to software. With this technology, multiple, independent operating systems can run simultaneously on a single system. The technology components support virtualization of platforms based on Intel architecture microprocessors and chipsets. Intel® Virtualization Technology for IA-32, Intel® 64 and Intel® Architecture (Intel® VT-x) added hardware support in the processor to improve the virtualization performance and robustness.

RTS Real-Time Hypervisor supports Intel VT and is verified on all current congatec x86 hardware.

Note

congatec supports only RTS Hypervisor.

7.2 ACPI Suspend Modes and Resume Events

The conga-HPC/sILL BIOS does not supports S3 and S4 states. The S5 state is however supported. The table below lists the events that wake the system from S5 state.

Table 16 Wake Events

Wake Event	Conditions/Remarks
Power Button	Wakes unconditionally from S5
Onboard LAN Event	Device driver must be configured for Wake On LAN support
SMB_ALERT#	Wakes unconditionally from S5, S5e
PCI Express WAKE#	Wakes unconditionally from S5
WAKE#	Wakes unconditionally from S5
PME#	Activate the wake up capabilities of a PCI device using Windows Device Manager configuration options for this device or enable 'Resume On PME#' in the Power setup menu.
USB Mouse/Keyboard Event	When "Standby mode" is set to S3, USB hardware must be powered by standby power source. Set "USB Device Wakeup" from S3/S4 to "Enabled" in the ACPI setup menu (if setup node is available in BIOS setup program) In device manager, look for the keyboard/mouse devices. Go to the power management tab and check "Allow this device to bring the computer out of standby".
RTC Alarm	Activate and configure Resume On RTC Alarm in the Power setup menu. Wakes unconditionally from S5.
Watchdog Power Button Event	Wakes unconditionally from S5

7.3 Memory Population Rules

The Intel Ice Lake-D LCC SoC featured on the conga-HPC/sILL supports ECC and non-ECC DDR4 memory modules, up to 2933 MTps. The DDR4 memory modules have lower voltage requirements with higher data rate transfer speeds.

The diagram below shows the location of the memory slots on the conga-HPC/sILL.

The following population rules must be observed:

- All DIMMs in a channel must have same width (x4, x8 or x16)
- Do not mix ECC and non-ECC memory modules.
- Mixing single and dual rank DIMMs is allowed but may reduce the memory speed
- Mixing memory densities (8 Gb vs 16 Gb) within a channel is allowed
- Either channel 0 or channel 1, or both can be populated.
- DIMM 0 of channel 0 or 1 (slot X1 and X3) must be populated if only one memory module is used.

Note

Post code 17 occurs if you insert only one memory module in slot X2 or X4 (DIMM 1 of channel 0 or 1).

8 Signal Descriptions and Pinout Tables

The following section describes the signals found on the conga-HPC/sILL. The pinout of the module complies with COM-HPC® size D server module.

The table below describes the terminology used in this section. The PU/PD column indicates if a COM-HPC® module pull-up or pull-down resistor has been used. If the field entry area in this column for the signal is empty, then no pull-up or pull-down resistor has been implemented by congatec.

The “#” symbol at the end of the signal name indicates that the active or asserted state occurs when the signal is at a low voltage level. When “#” is not present, the signal is asserted when at a high voltage level.

Note

The signal description tables do not list internal pull-ups or pull-downs implemented by the chip vendors. Only pull-ups or pull-downs implemented by congatec are listed. For information about the internal pull-ups or pull-downs implemented by the chip vendors, refer to the respective chip’s datasheet.

Table 17 Terminology Descriptions

Term	Description
DDC	Display Data Channel
I/O 3.3V	Bi-directional signal 3.3V tolerant
I/O 5V	Bi-directional signal 5V tolerant
I 3.3V	Input 3.3V tolerant
I 5V	Input 5V tolerant
I/O 3.3VSB	Input 3.3V tolerant active in standby state
KR	Ethernet 25GBASE-KR or 10GBASE-KR compatible signal
KX	Ethernet 1000BASE-KX compatible signal
LV_DIFF	Low voltage differential signals —may include DP, TMDS, DP_AUX, MIPI D-PHY
MDI	Media Dependent Interface, used for NBASE-T signaling
NFET	N channel FET output, drain pin; module can pull low to GND or float
O 3.3V	Output 3.3V signal level
O 5V	Output 5V signal level
OD	Open drain output
P	Power Input/Output
PCIE	In compliance with PCI Express Base Specification
PU	congatec implemented pull-up resistor
PD	congatec implemented pull-down resistor

PDS	Pull-down strap. A module output pin that is either tied to GND or is not connected. Used to signal module capabilities (pinout type) to the carrier board.
REF	Reference voltage output (minimum GND, maximum 3.3V). May be sourced from a module power plane
SATA	In compliance with SATA specification
T	Higher voltage tolerance
USB	USB 2.0 compliant differential signals
USB_SS	USB Super Speed compliant signals (USB 3.0, USB 3.1, USB 3.2)
V _{OL}	Output low voltage
V _{OH}	Output high voltage

Table 20 PCI Express Signal Descriptions (general purpose)

Signal	Pin #	Description	I/O	PU/PD	Comment
PCle00_TX+ PCle00_TX-	D62 D61	PCI Express Transmit Output Differential Pairs 0	O PCIE		Supports PCI Express Base Specification, Revision 3.0
PCle00_RX+ PCle00_RX-	C63 C62	PCI Express Receive Input Differential Pairs 0	I PCIE		
PCle01_TX+ PCle01_TX-	D65 D64	PCI Express Transmit Output Differential Pairs 1	O PCIE		Supports PCI Express Base Specification, Revision 3.0
PCle01_RX+ PCle01_RX-	C66 C65	PCI Express Receive Input Differential Pairs 1	I PCIE		
PCle02_TX+ PCle02_TX-	D68 D67	PCI Express Transmit Output Differential Pairs 2	O PCIE		Supports PCI Express Base Specification, Revision 3.0
PCle02_RX+ PCle02_RX-	C69 C68	PCI Express Receive Input Differential Pairs 2	I PCIE		
PCle03_TX+ PCle03_TX-	D71 D70	PCI Express Transmit Output Differential Pairs 3	O PCIE		Supports PCI Express Base Specification, Revision 3.0
PCle03_RX+ PCle03_RX-	C72 C71	PCI Express Receive Input Differential Pairs 3	I PCIE		
PCle04_TX+ PCle04_TX-	D74 D73	PCI Express Transmit Output Differential Pairs 4	O PCIE		Supports PCI Express Base Specification, Revision 3.0
PCle04_RX+ PCle04_RX-	C75 C74	PCI Express Receive Input Differential Pairs 4	I PCIE		
PCle05_TX+ PCle05_TX-	D77 D76	PCI Express Transmit Output Differential Pairs 5	O PCIE		Supports PCI Express Base Specification, Revision 3.0
PCle05_RX+ PCle05_RX-	C78 C77	PCI Express Receive Input Differential Pairs 5	I PCIE		
PCle06_TX+ PCle06_TX-	D80 D79	PCI Express Transmit Output Differential Pairs 6	O PCIE		Supports PCI Express Base Specification, Revision 3.0
PCle06_RX+ PCle06_RX-	C81 C80	PCI Express Receive Input Differential Pairs 6	I PCIE		
PCle07_TX+ PCle07_TX-	D83 D82	PCI Express Transmit Output Differential Pairs 7	O PCIE		Supports PCI Express Base Specification, Revision 3.0
PCle07_RX+ PCle07_RX-	C84 C83	PCI Express Receive Input Differential Pairs 7	I PCIE		
PCle08_TX+ PCle08_TX-	A63 A62	PCI Express Transmit Output Differential Pairs 8	O PCIE		Supports PCI Express Base Specification, Revision 3.0
PCle08_RX+ PCle08_RX-	B62 B61	PCI Express Receive Input Differential Pairs 8	I PCIE		
PCle09_TX+ PCle09_TX-	A66 A65	PCI Express Transmit Output Differential Pairs 9	O PCIE		Supports PCI Express Base Specification, Revision 3.0
PCle09_RX+ PCle09_RX-	B65 B64	PCI Express Receive Input Differential Pairs 9	I PCIE		

PCIE10_TX+ PCIE10_TX-	A69 A68	PCI Express Transmit Output Differential Pairs 10	O PCIE		Supports PCI Express Base Specification, Revision 3.0
PCIE10_RX+ PCIE10_RX-	B68 B67	PCI Express Receive Input Differential Pairs 10	I PCIE		
PCIE11_TX+ PCIE11_TX-	A72 A71	PCI Express Transmit Output Differential Pairs 11	O PCIE		Supports PCI Express Base Specification, Revision 3.0
PCIE11_RX+ PCIE11_RX-	B71 B70	PCI Express Receive Input Differential Pairs 11	I PCIE		
PCIE12_TX+ PCIE12_TX-	B75 A74	PCI Express Transmit Output Differential Pairs 12	O PCIE		Supports PCI Express Base Specification, Revision 3.0
PCIE12_RX+ PCIE12_RX-	B74 B73	PCI Express Receive Input Differential Pairs 12	I PCIE		
PCIE13_TX+ PCIE13_TX-	A78 A77	PCI Express Transmit Output Differential Pairs 13	O PCIE		Supports PCI Express Base Specification, Revision 3.0
PCIE13_RX+ PCIE13_RX-	B77 B76	PCI Express Receive Input Differential Pairs 13	I PCIE		
PCIE14_TX+ PCIE14_TX-	A81 A80	PCI Express Transmit Output Differential Pairs 14	O PCIE		Supports PCI Express Base Specification, Revision 3.0
PCIE14_RX+ PCIE14_RX-	B80 B79	PCI Express Receive Input Differential Pairs 14	I PCIE		
PCIE15_TX+ PCIE15_TX-	A84 A83	PCI Express Transmit Output Differential Pairs 15	O PCIE		Supports PCI Express Base Specification, Revision 3.0
PCIE15_RX+ PCIE15_RX-	B83 B82	PCI Express Receive Input Differential Pairs 15	I PCIE		
PCIE16_TX+ PCIE16_TX-	E46 E45	PCI Express Transmit Output Differential Pairs 16	O PCIE		Supports PCI Express Base Specification, Revision 4.0
PCIE16_RX+ PCIE16_RX-	F45 F44	PCI Express Receive Input Differential Pairs 16	I PCIE		
PCIE17_TX+ PCIE17_TX-	E49 E48	PCI Express Transmit Output Differential Pairs 17	O PCIE		Supports PCI Express Base Specification, Revision 4.0
PCIE17_RX+ PCIE17_RX-	F48 F47	PCI Express Receive Input Differential Pairs 17	I PCIE		
PCIE18_TX+ PCIE18_TX-	E52 E51	PCI Express Transmit Output Differential Pairs 18	O PCIE		Supports PCI Express Base Specification, Revision 4.0
PCIE18_RX+ PCIE18_RX-	F51 F50	PCI Express Receive Input Differential Pairs 18	I PCIE		
PCIE19_TX+ PCIE19_TX-	E55 E54	PCI Express Transmit Output Differential Pairs 19	O PCIE		Supports PCI Express Base Specification, Revision 4.0
PCIE19_RX+ PCIE19_RX-	F54 F53	PCI Express Receive Input Differential Pairs 19	I PCIE		
PCIE20_TX+ PCIE20_TX-	E58 E57	PCI Express Transmit Output Differential Pairs 20	O PCIE		Supports PCI Express Base Specification, Revision 4.0
PCIE20_RX+ PCIE20_RX-	F57 F56	PCI Express Receive Input Differential Pairs 20	I PCIE		

PCIE21_TX+ PCIE21_TX-	E61 E60	PCI Express Transmit Output Differential Pairs 21	O PCIE		Supports PCI Express Base Specification, Revision 4.0
PCIE21_RX+ PCIE21_RX-	F60 F59	PCI Express Receive Input Differential Pairs 21	I PCIE		
PCIE22_TX+ PCIE22_TX-	E64 E63	PCI Express Transmit Output Differential Pairs 22	O PCIE		Supports PCI Express Base Specification, Revision 4.0
PCIE22_RX+ PCIE22_RX-	F63 F62	PCI Express Receive Input Differential Pairs 22	I PCIE		
PCIE23_TX+ PCIE23_TX-	E67 E66	PCI Express Transmit Output Differential Pairs 23	O PCIE		Supports PCI Express Base Specification, Revision 4.0
PCIE23_RX+ PCIE23_RX-	F66 F65	PCI Express Receive Input Differential Pairs 23	I PCIE		
PCIE24_TX+ PCIE24_TX-	H45 H44	PCI Express Transmit Output Differential Pairs 24	O PCIE		Supports PCI Express Base Specification, Revision 4.0
PCIE24_RX+ PCIE24_RX-	G46 G45	PCI Express Receive Input Differential Pairs 24	I PCIE		
PCIE25_TX+ PCIE25_TX-	H48 H47	PCI Express Transmit Output Differential Pairs 25	O PCIE		Supports PCI Express Base Specification, Revision 4.0
PCIE25_RX+ PCIE25_RX-	G46 G45	PCI Express Receive Input Differential Pairs 25	I PCIE		
PCIE26_TX+ PCIE26_TX-	H51 H50	PCI Express Transmit Output Differential Pairs 26	O PCIE		Supports PCI Express Base Specification, Revision 4.0
PCIE26_RX+ PCIE26_RX-	G52 G51	PCI Express Receive Input Differential Pairs 26	I PCIE		
PCIE27_TX+ PCIE27_TX-	H54 H53	PCI Express Transmit Output Differential Pairs 27	O PCIE		Supports PCI Express Base Specification, Revision 4.0
PCIE27_RX+ PCIE27_RX-	G55 G54	PCI Express Receive Input Differential Pairs 27	I PCIE		
PCIE28_TX+ PCIE28_TX-	H57 H56	PCI Express Transmit Output Differential Pairs 28	O PCIE		Supports PCI Express Base Specification, Revision 4.0
PCIE28_RX+ PCIE28_RX-	G58 G57	PCI Express Receive Input Differential Pairs 28	I PCIE		
PCIE29_TX+ PCIE29_TX-	H60 H59	PCI Express Transmit Output Differential Pairs 29	O PCIE		Supports PCI Express Base Specification, Revision 4.0
PCIE29_RX+ PCIE29_RX-	G61 G60	PCI Express Receive Input Differential Pairs 29	I PCIE		
PCIE30_TX+ PCIE30_TX-	H63 H62	PCI Express Transmit Output Differential Pairs 30	O PCIE		Supports PCI Express Base Specification, Revision 4.0
PCIE30_RX+ PCIE30_RX-	G64 G63	PCI Express Receive Input Differential Pairs 30	I PCIE		
PCIE31_TX+ PCIE31_TX-	H66 H65	PCI Express Transmit Output Differential Pairs 31	O PCIE		Supports PCI Express Base Specification, Revision 4.0
PCIE31_RX+ PCIE31_RX-	G67 G66	PCI Express Receive Input Differential Pairs 31	I PCIE		

PCIE32_TX+ PCIE32_TX-	E22 E21	PCI Express Transmit Output Differential Pairs 32	O PCIE		Not connected
PCIE32_RX+ PCIE32_RX-	F21 F20	PCI Express Receive Input Differential Pairs 32	I PCIE		
PCIE33_TX+ PCIE33_TX-	E25 E24	PCI Express Transmit Output Differential Pairs 33	O PCIE		Not connected
PCIE33_RX+ PCIE33_RX-	F24 F23	PCI Express Receive Input Differential Pairs 33	I PCIE		
PCIE34_TX+ PCIE34_TX-	E28 E27	PCI Express Transmit Output Differential Pairs 34	O PCIE		Not connected
PCIE34_RX+ PCIE34_RX-	F27 F26	PCI Express Receive Input Differential Pairs 34	I PCIE		
PCIE35_TX+ PCIE35_TX-	E31 E30	PCI Express Transmit Output Differential Pairs 35	O PCIE		Not connected
PCIE35_RX+ PCIE35_RX-	F30 F29	PCI Express Receive Input Differential Pairs 35	I PCIE		
PCIE36_TX+ PCIE36_TX-	E34 E33	PCI Express Transmit Output Differential Pairs 36	O PCIE		Not connected
PCIE36_RX+ PCIE36_RX-	F33 F32	PCI Express Receive Input Differential Pairs 36	I PCIE		
PCIE37_TX+ PCIE37_TX-	E37 E36	PCI Express Transmit Output Differential Pairs 37	O PCIE		Not connected
PCIE37_RX+ PCIE37_RX-	F36 F35	PCI Express Receive Input Differential Pairs 37	I PCIE		
PCIE38_TX+ PCIE38_TX-	E40 E39	PCI Express Transmit Output Differential Pairs 38	O PCIE		Not connected
PCIE38_RX+ PCIE38_RX-	F39 F38	PCI Express Receive Input Differential Pairs 38	I PCIE		
PCIE39_TX+ PCIE39_TX-	E43 E42	PCI Express Transmit Output Differential Pairs 39	O PCIE		Not connected
PCIE39_RX+ PCIE39_RX-	F42 F41	PCI Express Receive Input Differential Pairs 39	I PCIE		
PCIE40_TX+ PCIE40_TX-	H21 H20	PCI Express Transmit Output Differential Pairs 40	O PCIE		Not connected
PCIE40_RX+ PCIE40_RX-	G22 G21	PCI Express Receive Input Differential Pairs 40	I PCIE		
PCIE41_TX+ PCIE41_TX-	H24 H23	PCI Express Transmit Output Differential Pairs 41	O PCIE		Not connected
PCIE41_RX+ PCIE41_RX-	G25 G24	PCI Express Receive Input Differential Pairs 41	I PCIE		
PCIE42_TX+ PCIE42_TX-	H27 H26	PCI Express Transmit Output Differential Pairs 42	O PCIE		Not connected
PCIE42_RX+ PCIE42_RX-	G28 G27	PCI Express Receive Input Differential Pairs 42	I PCIE		

PCIE43_TX+	H30	PCI Express Transmit Output Differential Pairs 43	O PCIE		Not connected
PCIE43_TX-	H29				
PCIE43_RX+	G31	PCI Express Receive Input Differential Pairs 43	I PCIE		
PCIE43_RX-	G30				
PCIE44_TX+	H33	PCI Express Transmit Output Differential Pairs 44	O PCIE		Not connected
PCIE44_TX-	H32				
PCIE44_RX+	G34	PCI Express Receive Input Differential Pairs 44	I PCIE		
PCIE44_RX-	G33				
PCIE45_TX+	H36	PCI Express Transmit Output Differential Pairs 45	O PCIE		Not connected
PCIE45_TX-	H35				
PCIE45_RX+	G37	PCI Express Receive Input Differential Pairs 45	I PCIE		
PCIE45_RX-	G36				
PCIE46_TX+	H39	PCI Express Transmit Output Differential Pairs 46	O PCIE		Not connected
PCIE46_TX-	H38				
PCIE46_RX+	G40	PCI Express Receive Input Differential Pairs 46	I PCIE		
PCIE46_RX-	G39				
PCIE47_TX+	H42	PCI Express Transmit Output Differential Pairs 47	O PCIE		Not connected
PCIE47_TX-	H41				
PCIE47_RX+	G43	PCI Express Receive Input Differential Pairs 47	I PCIE		
PCIE47_RX-	G42				
PCIE48_TX+	E70	PCI Express Transmit Output Differential Pairs 48	O PCIE		Not supported
PCIE48_TX-	E69				
PCIE48_RX+	F69	PCI Express Receive Input Differential Pairs 48	I PCIE		
PCIE48_RX-	F68				
PCIE49_TX+	E73	PCI Express Transmit Output Differential Pairs 49	O PCIE		Not connected
PCIE49_TX-	E72				
PCIE49_RX+	F72	PCI Express Receive Input Differential Pairs 49	I PCIE		
PCIE49_RX-	F71				
PCIE50_TX+	E76	PCI Express Transmit Output Differential Pairs 50	O PCIE		Not connected
PCIE50_TX-	E75				
PCIE50_RX+	F75	PCI Express Receive Input Differential Pairs 50	I PCIE		
PCIE50_RX-	F74				
PCIE51_TX+	E79	PCI Express Transmit Output Differential Pairs 51	O PCIE		Not connected
PCIE51_TX-	E78				
PCIE51_RX+	F78	PCI Express Receive Input Differential Pairs 51	I PCIE		
PCIE51_RX-	F77				
PCIE52_TX+	E82	PCI Express Transmit Output Differential Pairs 52	O PCIE		Not connected
PCIE52_TX-	E81				
PCIE52_RX+	F81	PCI Express Receive Input Differential Pairs 52	I PCIE		
PCIE52_RX-	F80				
PCIE53_TX+	E85	PCI Express Transmit Output Differential Pairs 53	O PCIE		Not connected
PCIE53_TX-	E84				
PCIE53_RX+	F84	PCI Express Receive Input Differential Pairs 53	I PCIE		
PCIE53_RX-	F83				

PCIE54_TX+ PCIE54_TX-	E88 E87	PCI Express Transmit Output Differential Pairs 54	O PCIE		Not connected
PCIE54_RX+ PCIE54_RX-	F87 F86	PCI Express Receive Input Differential Pairs 54	I PCIE		
PCIE55_TX+ PCIE55_TX-	E91 E90	PCI Express Transmit Output Differential Pairs 55	O PCIE		Not connected
PCIE55_RX+ PCIE55_RX-	F90 F89	PCI Express Receive Input Differential Pairs 55	I PCIE		
PCIE56_TX+ PCIE56_TX-	H69 H68	PCI Express Transmit Output Differential Pairs 56	O PCIE		Not connected
PCIE56_RX+ PCIE56_RX-	G70 G69	PCI Express Receive Input Differential Pairs 56	I PCIE		
PCIE57_TX+ PCIE57_TX-	H72 H71	PCI Express Transmit Output Differential Pairs 57	O PCIE		Not connected
PCIE57_RX+ PCIE57_RX-	G73 G72	PCI Express Receive Input Differential Pairs 57	I PCIE		
PCIE58_TX+ PCIE58_TX-	H75 H74	PCI Express Transmit Output Differential Pairs 58	O PCIE		Not connected
PCIE58_RX+ PCIE58_RX-	G76 G75	PCI Express Receive Input Differential Pairs 58	I PCIE		
PCIE59_TX+ PCIE59_TX-	H78 H77	PCI Express Transmit Output Differential Pairs 59	O PCIE		Not connected
PCIE59_RX+ PCIE59_RX-	G79 G78	PCI Express Receive Input Differential Pairs 59	I PCIE		
PCIE60_TX+ PCIE60_TX-	H81 H80	PCI Express Transmit Output Differential Pairs 60	O PCIE		Not connected
PCIE60_RX+ PCIE60_RX-	G82 G81	PCI Express Receive Input Differential Pairs 60	I PCIE		
PCIE61_TX+ PCIE61_TX-	H84 H83	PCI Express Transmit Output Differential Pairs 61	O PCIE		Not connected
PCIE61_RX+ PCIE61_RX-	G85 G84	PCI Express Receive Input Differential Pairs 61	I PCIE		
PCIE62_TX+ PCIE62_TX-	H87 H86	PCI Express Transmit Output Differential Pairs 62	O PCIE		Not connected
PCIE62_RX+ PCIE62_RX-	G88 G87	PCI Express Receive Input Differential Pairs 62	I PCIE		
PCIE63_TX+ PCIE63_TX-	H90 H89	PCI Express Transmit Output Differential Pairs 63	O PCIE		Not connected
PCIE63_RX+ PCIE63_RX-	G91 G90	PCI Express Receive Input Differential Pairs 63	I PCIE		
PCIE_BMC_TX+ PCIE_BMC_TX-	A60 A59	PCI Express Differential Transmit Pair for carrier BMC	O PCIE		Supports PCI Express Base Specification, Revision 3.0 for carrier BMC
PCIE_BMC_RX+ PCIE_BMC_RX-	B59 B58	PCI Express Differential Receive Pair for carrier BMC	I PCIE		

PCle_REFCLK0_LO+ PCle_REFCLK0_LO-	C60 C59	Reference clock pair for PCIe lanes [0:7], also referred to as PCIe Group 0 Low and for the PCIe_BMC link	O LV_DIFF		PCIe clock for PCIe Gen 3 devices
PCle_REFCLK0_HI+ PCle_REFCLK0_HI-	C57 C56	Reference clock pair for PCIe lanes [8:15] also referred to as PCIe Group 0 High	O LV_DIFF		PCIe clock for PCIe Gen 3 devices
PCle_REFCLK1+ PCle_REFCLK1-	E94 E93	Reference clock pair for PCIe lanes [16:31] also referred to as PCIe Group 1	O LV_DIFF		PCIe clock for PCIe Gen 4 devices (lanes 16 - 31)
PCle_REFCLK2+ PCle_REFCLK2-	F93 F92	Reference clock pair for PCIe lanes [32:47] also referred to as PCIe Group 2	O LV_DIFF		PCIe clock for PCIe Gen 3 devices
PCle_REFCLK3+ PCle_REFCLK3-	G94 G93	Reference clock pair for PCIe lanes [48:63] also referred to as PCIe Group 3	O LV_DIFF		PCIe clock for PCIe Gen 3 devices
PCle_CLKREQ0_LO#	A56	PCIe reference clock request signal from carrier devices for PCIe_REFCLK0_LO clock pair	Bi-Dir OD 3.3 V	PU 10 K Ω 3.3 V	Reference clock control for PCIe Gen 3 devices
PCle_CLKREQ0_HI#	A57	PCIe reference clock request signal from carrier devices for PCIe_REFCLK0_HI clock pair	Bi-Dir OD 3.3 V	PU 10 K Ω 3.3 V	Reference clock control for PCIe Gen 3 devices
PCle_CLKREQ1#	E96	PCIe reference clock request signal from carrier devices for PCIe_REFCLK1 clock pair	Bi-Dir OD 3.3 V	PU 10 K Ω 3.3 V	Reference clock control for PCIe Gen 4 devices
PCle_CLKREQ2#	E97	PCIe reference clock request signals from carrier devices for PCIe_REFCLK2 clock pair	Bi-Dir OD 3.3 V	PU 10 K Ω 3.3 V	Reference clock control for PCIe Gen 3 devices
PCle_CLKREQ3#	F95	PCIe reference clock request signal from carrier devices for PCIe_REFCLK3 pair	Bi-Dir OD 3.3 V	PU 10 K Ω 3.3 V	Reference clock control for PCIe Gen 3 devices

PCI Express Additional Signals to Support Module-based PCIe Targets

PCle_REFCLKIN0+ PCle_REFCLKIN0-	H93 H92	Reference clock inputs allowing carrier based root to operate with module based PCIe targets. The module designer making use of these clocks should terminate them in a way appropriate to that design.	I LV_DIFF 3.3 V		Not connected
PCle_REFCLKIN1+ PCle_REFCLKIN1-	H96 H95	Reference clock inputs allowing carrier based root to operate with module based PCIe targets. The module designer making use of these clocks should terminate them in a way appropriate to that design.	I LV_DIFF 3.3 V		Not connected
PCle_WAKE_OUT0#	G100	Wake request signal from module based PCIe target to an off-module PCIe Root complex	OD 3.3 V		Not connected
PCle_WAKE_OUT1#	H100	Wake request signal from module based PCIe target to an off-module PCIe root complex	OD 3.3 V		Not connected
PCle_PERST_IN0#	E100	Reset signals into module to reset module PCIe targets	I 3.3 V		Not connected
PCle_PERST_IN1#	F100	Reset signals into module to reset module PCIe targets	I 3.3 V		Not connected

MDI[1]+/-	B1_DB+/-	RX+/-	RX+/-																						
MDI[2]+/-	B1_DC+/-																								
MDI[3]+/-	B1_DD+/-																								
NBASET0_LINK_ACT#	D99	NBASE-T Ethernet controller activity indicator, active low. 20 mA or more current sink capability at VOL of 0.4V max. 20 mA or more current source capability at VOH of 2.4V min.	O 3.3 VSB																						
NBASET0_LINK_MAX#	D97	NBASE-T Ethernet controller maximum speed link indicator (active low). If active, the link is established at the maximum speed that the Ethernet controller is capable of (which may be 10G, 5G, 2.5G etc). 20 mA or more current sink capability at VOL of 0.4V max. 20 mA or more current source capability at VOH of 2.4V min.	O 3.3 VSB																						
NBASET0_LINK_MID#	D98	NBASE-T Ethernet controller mid speed link indicator (active low). If active, the link is established but at a speed lower than what the maximum speed that the Ethernet controller is capable of. 20 mA or more current sink capability at VOL of 0.4V max. 20 mA or more current source capability at VOH of 2.4V min.	O 3.3 VSB																						
NBASET0_CTREF	C99	Reference voltage for carrier board NBASET Ethernet channel 0 magnetics center tap. The reference voltage is determined by the requirements of the module PHY and may be as low as 0V and as high as 3.3V. If not needed, these pins may be left open on the carrier. The reference voltage output shall be current limited on the module. In the case in which the reference is shorted to ground, the current shall be limited to 250 mA or less.	REF		Not connected																				
NBASET0_SDP	C98	NBASE-T Ethernet Controller 0 Software-Definable Pin. Can also be used for IEEE1588 support such as a 1pps signal.	I/O 3.3 VSB																						

Table 22 Ethernet KR and KX Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
ETH0_TX+ ETH0_TX-	C21 C20	Ethernet KR ports, transmit output differential pairs.	O KR

ETH7_TX+ ETH7_TX-	A45 A44	Ethernet KR ports, transmit output differential pairs.	O KR		
ETH7_RX+ ETH7_RX-	A30 A29	Ethernet KR ports, receive input differential pairs.	I KR		
ETH0-3_MDIO_DAT ¹	H99	Management Data I/O interface mode data signal for serial data transfers between the MAC and an external PHY for ETHx ports 0 to 3	I/O 3.3 VSB	PU 1 K Ω 3.3 VSB	
ETH0-3_MDIO_CLK ¹	H98	Clock signal for Management Data I/O interface mode data signal for serial data transfers between the MAC and an external PHY for ETHx ports 0 to 3	O 3.3 VSB	PU 1 K Ω 3.3 VSB	
ETH4-7_MDIO_DAT	F11	Management Data I/O interface mode data signal for serial data transfers between the MAC and an external PHY for ETHx ports 4 to 7	I/O 3.3 VSB	PU 1 K Ω 3.3 VSB	
ETH4-7_MDIO_CLK	F10	Clock signal for Management Data I/O interface mode data signal for serial data transfers between the MAC and an external PHY for ETHx ports 4 to 7	O 3.3 VSB	PU 1 K Ω 3.3 VSB	
ETH0-3_INT#	G99	Active low interrupt signal from IO Port expanders for ETH ports 0 to 3	I 3.3 VSB	PU 2.2 K Ω 3.3 VSB	

ETH4-7_INT#	F9	Active low interrupt signal from IO Port expanders for ETH ports 4 to 7	I 3.3 VSB	PU 2.2 K Ω 3.3 VSB	
ETH0-3_PHY_INT#	G98	Active low PHY interrupt signal from ETH ports 0 to 3	I 3.3 V		Not supported
ETH4-7_PHY_INT#	F12	Active low PHY interrupt signal from ETH ports 4 to 7	I 3.3 V		Not supported
ETH0-3_PHY_RST#	F97	Active low output PHY reset signal for ETH ports 0 to 3	O 3.3 V		
ETH4-7_PHY_RST#	F13	Active low output PHY reset signal for ETH ports 4 to 7	O 3.3 V		
ETH0-3_I2C_DAT	G97	I2C data signal of the 2-wire management interface used by the Ethernet KR controller to access the management registers of an external SFP module or to configure the carrier PHY for ETHx ports 0 to 3 and for serialized status information (e.g. LED states)	I/O OD 3.3 VSB	PU 10 K Ω 3.3 VSB	
ETH0-3_I2C_CLK	G96	The I2C clock signals associated with ETH0-3 I2C data lines in the row above	I/O OD 3.3 VSB	PU 10 K Ω 3.3 VSB	
ETH4-7_I2C_DAT	F8	I2C data signal of the 2-wire management interface used by the Ethernet KR controller to access the management registers of an external SFP module or to configure the carrier PHY for ETHx ports 4 to 7 and for serialized status information (e.g. LED states)	I/O OD 3.3 VSB	PU 10 K Ω 3.3 VSB	
ETH4-7_I2C_CLK	F7	The I2C clock signals associated with ETH4-7 I2C data lines in the row above	I/O OD 3.3 VSB	PU 10 K Ω 3.3 VSB	
ETH0_SDP ¹ ETH1_SDP ¹ ETH2_SDP ¹ ETH3_SDP ¹	F98 F99 F1 F2	Software-Definable Pins. Can also be used for IEEE1588 support such as a PPS signal	I/O 3.3 VSB	PU 10 K Ω 3.3 VSB	
ETH4_SDP ETH5_SDP ETH6_SDP ETH7_SDP	F3 F4 F5 F6	Software-Definable Pins. Can also be used for IEEE1588 support such as a 1pps signal	I/O 3.3 VSB		Not supported
ETH0-3_PRSENT#	F96	Carrier pulls this line to GND if there is carrier hardware present to support Ethernet KR signaling on ETH0 through ETH3. If the entire KR quad is not supported it should pull from ETH0 on up	I 3.3 VSB	PU 2.2 K Ω 3.3 VSB	
ETH4-7_PRSENT#	F14	Carrier pulls this line to GND if there is carrier hardware present to support Ethernet KR signaling on ETH4 through ETH7. If the entire KR quad is not supported it should pull from ETH4 on up	I 3.3 VSB	PU 2.2 K Ω 3.3 VSB	

 **Note**

¹ These signals have special function during the reset process. For more information, see section 8.2 "Boot Strap Signals".

Table 23 SATA Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
SATA0_TX+ SATA0_TX-	D53 D52	Serial ATA channel 0, Transmit Output differential pair.	O SATA		Supports SATA specification 3.2
SATA0_RX+ SATA0_RX-	D50 D49	Serial ATA channel 0, Receive Input differential pair.	I SATA		Supports SATA specification 3.2
SATA1_TX+ SATA1_TX-	D59 D58	Serial ATA channel 1, Transmit Output differential pair.	O SATA		Supports SATA specification 3.2
SATA1_RX+ SATA1_RX-	D56 D55	Serial ATA channel 1, Receive Input differential pair.	I SATA		Supports SATA specification 3.2

Table 24 USB Signal Descriptions

USB	Pin #	Description	I/O	PU/PD	Comment		
USB0+ USB0-	D17 D16	USB 2.0 differential pairs, channels 0 through 7. USB0 may be configured as a USB client or as a host, or both at the module designer's discretion. All other USB ports, if implemented, shall be host ports If any SuperSpeed ports are implemented, then they must be supported by a USB 2.0 port, using one of the USB[0:3] ports from this pool. Specific pairings are detailed below	I/O USB 3.3 V		USB 2.0 compliant. Backwards compatible to USB 1.1		
USB1+ USB1-	D14 D13		I/O USB 3.3 V				
USB2+ USB2-	C18 C17		I/O USB 3.3 V				
USB3+ USB3-	C15 C14		I/O USB 3.3 V				
USB4+ USB4-	B17 B16		I/O USB 3.3 V				
USB5+ USB5-	B14 B13		I/O USB 3.3 V				
USB6+ USB6-	A18 A17		I/O USB 3.3 V				
USB7+ USB7-	A15 A14		I/O USB 3.3 V				
USB0_SSTX0+ USB0_SSTX0-	D44 D43		Four sets of SuperSpeed differential pairs used to realize one USB 3.2 Gen 2 2x2 port 0. Alternatively, USB 3.2 Gen 1 or Gen 2 ports (single TX pair, single RX pair per port) may be implemented using a portion of this interface	O USB SS			USB 3.1 Gen 1 compliant.
USB0_SSRX0+ USB0_SSRX0-	C45 C44			I USB SS			
USB0_SSTX1+ USB0_SSTX1-	D47 D46	This port shall be used in conjunction with the corresponding USB 2.0 port pair (e.g. USB0 USB 2.0 differential pairs)	O USB SS		Not connected		
USB0_SSRX1+ USB0_SSRX1-	C48 C47		I USB SS				

USB1_SSTX0+ USB1_SSTX0-	D38 D37	Four sets of SuperSpeed differential pairs, used to realize one USB 3.2 Gen 2 2x2 port 1. Alternatively, USB 3.2 Gen 1 or Gen 2 ports (single TX pair, single RX pair per port) may be implemented using a portion of this interface	O USB SS		USB 3.1 Gen 1 complaint.
USB1_SSRX0+ USB1_SSRX0-	C39 C38		I USB SS		
USB1_SSTX1+ USB1_SSTX1-	D41 D40	This port shall be used in conjunction with the corresponding USB 2.0 port pair (e.g. USB1 USB 2.0 differential pairs)	O USB SS		Not connected
USB1_SSRX1+ USB1_SSRX1-	C42 C41		I USB SS		
USB2_SSTX+ USB2_SSTX-	D35 D34	Two sets of SuperSpeed differential pairs, used to realize one USB 3.2 Gen 1 or Gen 2 implementation This port shall be used in conjunction with the corresponding USB 2.0 port pair (e.g. USB2 USB 2.0 differential pairs)	O USB SS		USB 3.1 Gen 1 complaint.
USB2_SSRX+ USB2_SSRX-	C36 C35		I USB SS		
USB3_SSTX+ USB3_SSTX-	D32 D31	Two sets of SuperSpeed differential pairs, used to realize one USB 3.2 Gen 1 or Gen 2 implementation. This port shall be used in conjunction with the corresponding USB 2.0 port pair (e.g. USB3 USB 2.0 differential pairs)	O USB SS		USB 3.1 Gen 1 complaint.
USB3_SSRX+ USB3_SSRX-	C33 C32		I USB SS		
USB01_OC#	B28	USB over-current sense, USB channels 0,1; channels 2,3; channels 4,5 and channels 6,7 respectively. A pull-up for each of these lines to the 3.3V Suspend rail shall be present on the module. The pull-up should be 10K. An open drain driver from USB current monitors on the carrier board may drive this line low. The carrier board shall not pull these lines up Note that the over-current limits for USB 2.0 and USB 3.0 are different; this is a carrier board implementation item	I 3.3 V	PU 10 KΩ 3.3 VSB	
USB23_OC#	B27			PU 10 KΩ 3.3 VSB	
USB45_OC#	B26				Not connected
USB67_OC#	B25				Not connected
RSMRST_OUT#	B86	USB devices that are to be powered in the S5 / S4 / S3 Suspend states should not have their 5V VBUS power enabled before RSMRST_OUT# transitions to the high state	O 3.3 V	PD 100K	

Table 25 USB 4 Support Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
USB0_AUX+	B44	DisplayPort Aux channel for USB4 DP modes High speed differential pair	LV_DIFF		Not connected
USB0_AUX-	B43				
USB1_AUX+	A48	DisplayPort Aux channel for USB4 DP modes High speed differential pair	LV_DIFF		Not connected
USB1_AUX-	A47				
USB0_LSTX	B41	Sideband TX interface for USB4 Alternate modes "Low Speed" asynchronous serial TX line	O 3.3 V		Not connected
USB0_LSRX	B40	Sideband RX interface for USB4 Alternate modes "Low Speed" asynchronous serial RX line	I 3.3 V		Not connected
USB1_LSTX	B39	Sideband TX interface for USB4 Alternate modes "Low Speed" asynchronous serial TX line	O 3.3 V		Not connected
USB1_LSRX	B38	Sideband RX interface for USB4 Alternate modes "Low Speed" asynchronous serial RX line	I 3.3 V		Not connected
SML0_DAT	B33	Data line for I2C data based System Management Links between chipset masters and carrier. SML0 is used to control the carrier based USB re-timers and SML1 controls the carrier based USB Power Delivery Controller	Bi-Dir OD 3.3 VSB	PU 10 K Ω 3.3 VSB	
SML1_DAT	B30				
SML0_CLK	B32	Clock lines for System Management Links 0 and 1. SML0 is used to support carrier USB4 re-timers while SML1 is used to support carrier USB Power Delivery (PD) Controller	Bi-Dir OD 3.3 VSB	PU 10 K Ω 3.3 VSB	
SML1_CLK	B29				
PMCALERT#	B31	Active low Alert signal associated with the SML1 System Management link, from the carrier based USB Power Delivery Controller	I 3.3 VSB	PU 10 K Ω 3.3 VSB	
USB_RT_ENA	B37	Power Enable for carrier based USB Retimers. Sourced from chipset GPO. "USB Re-Timer Enable"	O 3.3 V		Not connected
USB_PD_I2C_DAT	B36	I2C data line between module based Embedded Controller master and carrier based USB Power Delivery Controller slave	Bi-Dir OD 3.3 V	PU 2.2 K Ω 3.3 VSB	
USB_PD_I2C_CLK	B35	I2C clock line between module based Embedded Controller master and carrier based USB Power Delivery Controller slave	Bi-Dir OD 3.3 V	PU 2.2 K Ω 3.3 VSB	
USB_PD_ALERT#	B34	Active low Alert signal from USB Power Delivery Controller to the module Embedded Controller	I 3.3 V	PU 2.2 K Ω 3.3 VSB	
Additional Signals to Support USB4 Implementation					
PLTRST#	A12	Platform Reset: output from module to carrier board. Active low. Issued by module chipset and may result from a low RSTBTN# input, a low VIN_PWR_OK input, a VCC power input that falls below the minimum specification, a watchdog timeout, or may be initiated by the module software PLTRST# should remain asserted (low) while the RSTBTN# is low.	O 3.3 V	PD 10K	
SUS_S4_S5#	C08	Indicates system is in Suspend to Disk (S4) or Soft Off (S5) state. Active low output	O 3.3 V	PD 1K	

Table 26 eSPI Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
eSPI_IO0 eSPI_IO1 eSPI_IO2 eSPI_IO3	A50 A51 A52 A53	eSPI Master Data Input / Outputs. These are bi-directional input/output pins used to transfer data between master and slaves	I/O 1.8 VSB	PU 10 K Ω 1.8VSB	
eSPI_CS0# eSPI_CS1#	B54 B55	eSPI Master Chip Select Outputs. A low selects a particular eSPI slave for the transaction. Each of the eSPI slaves is connected to a dedicated Chip Select pin. If an eSPI_CSx# pins is not in use, it shall be either pulled high or actively driven high	O 1.8 VSB	PU 10 K Ω 1.8 VSB	
eSPI_CLK	A54	eSPI Master Clock Output. This pin provides the reference timing for all the serial input and output operations	O 1.8 VSB	PD 20K	
eSPI_ALERT0#	B52	eSPI pins used by eSPI slave to request service from the eSPI master	I 1.8 VSB	PU 10 K Ω 1.8 VSB	
eSPI_ALERT1#	B53	eSPI pins used by eSPI slave to request service from the eSPI master	I 1.8 VSB		Not supported
eSPI_RST#	B56	eSPI Reset - resets the eSPI interface for both master and slaves. eSPI_RST# is typically driven from the eSPI master to eSPI slaves	O 1.8 VSB	PU 20 K Ω 1.8 VSB	

Table 27 Boot SPI Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
BOOT_SPI_CS#	B48	Chip select for carrier board SPI If the BOOT_SPI_CS# pin is not in use, it shall be either pulled high or actively driven high.	O VCC_BOOT_SPI	PU 10 K Ω 3.3 VSB	
BOOT_SPI_IO0	C50	Bidirectional 4 bit data path out of and into a carrier SPI flash operating in Serial Quad Interface (SQI) mode. If the flash memory device is operating in traditional Serial Peripheral Interface (SPI) mode, then signal BOOT_SPI_IO0 is used for getting serial data into the flash device (referred to as SI or MOSI in SPI Flash data sheets) and signal BOOT_SPI_IO1 is used to get serial data from the flash device (referred to as SO or MISO in flash data sheets)	I/O VCC_BOOT_SPI	PU 10 K Ω 3.3 VSB	
BOOT_SPI_IO1	C51			PU 10 K Ω 3.3 VSB	
BOOT_SPI_IO2	C52				
BOOT_SPI_IO3	C53				
BOOT_SPI_CLK	C54	Clock from module chipset to carrier SPI	O VCC_BOOT_SPI	PU 10 K Ω 3.3 VSB	
VCC_BOOT_SPI	B47	Power supply for carrier board SPI – sourced from module – nominally either 1.8V or 3.3V. The module shall provide a minimum of 100mA on VCC_BOOT_SPI. Carriers shall use less than 100mA from this power source. VCC_BOOT_SPI shall only be used to power SPI devices on the carrier board. The module vendor may choose what power domains the BOOT_SPI is active in.	Power (Out from module)		3.3 VSB (active in suspend state)

Table 28 BIOS Select Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
BSEL2	B51	Boot Select pins. These pins distinguish between a SPI or eSPI BIOS boot and between an on—module or off-module BIOS.	I		Not connected
BSEL1	B50		I		Not connected
BSEL0	B49	Pulled up on module to vendor specific power rail	I	PU 10 K Ω 3.3 VSB	Pulled up to 3.3 VSB (active in suspend state)

Table 29 Asynchronous Serial Port Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
UART0_TX	C89	Logic level asynchronous serial port transmit signal	O 3.3 V		
UART0_RX	C90	Logic level asynchronous serial port receive signal	I 3.3 V	PU 47 K Ω 3.3V	
UART0_RTS#	C91	Logic level asynchronous serial port Request to Send signal, active low	O 3.3 V		
UART0_CTS#	C92	Logic level asynchronous serial port Clear to Send input, active low	I 3.3 V	PU 47 K Ω 3.3V	
UART1_TX	B87	Logic level asynchronous serial port transmit signal	O 3.3 V		
UART1_RX	B88	Logic level asynchronous serial port receive signal	I 3.3 V	PU 47 K Ω 3.3V	
UART1_RTS#	B89	Logic level asynchronous serial port Request to Send signal, active low	O 3.3 V		
UART1_CTS#	B90	Logic level asynchronous serial port Clear to Send input, active low	I 3.3 V	PU 47 K Ω 3.3V	

Table 30 I²C Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
I2C0_CLK	C93	Clock I/O line for the general purpose I2C0 port	I/O OD 3.3 VSB	PU 4.75 K Ω 3.3 VSB	
I2C0_DAT	C94	Data I/O line for the general purpose I2C0 port	I/O OD 3.3 VSB	PU 4.75 K Ω 3.3 VSB	
I2C0_ALERT#	C95	Alert input / interrupt for I2C0	I 3.3 V	PU 4.75 K Ω 3.3 VSB	
I2C1_CLK	C96	Clock I/O line for the general purpose I2C1 port	I/O OD 1.8 V	PU 4.75 K Ω 1.8 VSB	
I2C1_DAT	C97	Data I/O line for the general purpose I2C1 port	I/O OD 1.8 V	PU 4.75 K Ω 1.8 VSB	

Table 31 IPMB Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
IPMB_CLK	B91	Clock I/O line for the multi-master IPMB port	I/O OD 3.3 VSB	PU 4.75 K Ω 3.3 VSB	
IPMB_DAT	B92	Data I/O line for the multi-master IPMB port	I/O OD 3.3 VSB	PU 4.75 K Ω 3.3 VSB	

Table 32 General Purpose SPI Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
GP_SPI_MISO	B94	Serial data into the COM-HPC® module from the carrier GP_SPI device ("Master In Slave Out")	I 3.3 V	PU 10 KΩ 3.3 V	
GP_SPI_MOSI	B93	Serial data from the COM-HPC® module to the carrier GP_SPI device ("Master Out Slave In")	O 3.3 V		
GP_SPI_CLK	B99	Clock from the module to carrier GP_SPI device	O 3.3 V		
GP_SPI_CS0#	B95	GP_SPI chip selects, active low	O 3.3 V	PU 10 KΩ 3.3 V	
GP_SPI_CS1#	B96			PU 10 KΩ 3.3 V	
GP_SPI_CS2#	B97				Not connected
GP_SPI_CS3#	B98				Not connected
GP_SPI_ALERT#	B100			Alert (interrupt) from a carrier GP_SPI device to the module	I 3.3 V

Table 33 Power and System Management Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
PWRBTN#	B02	A falling edge creates a power button event. Power button events can be used to bring a system out of S5 soft off and other suspend states, as well as to power the system down (with a sustained low).	I 3.3 VSB	PU 100 KΩ 3.3 VSB	
RSTBTN#	C02	Reset button input. The RSTBTN# may be level sensitive (active low) or may be triggered by the falling edge of the signal. The module PLTRST# signal (below) should not be released (driven or pulled high) while the RSTBTN# is low. For situations when RSTBTN# is not able to reestablish control of the system, VIN_PWR_OK or a power cycle may be used.	I 3.3 VSB	PU 10 KΩ 3.3 VSB	
PLTRST#	A12	Platform Reset: Active low output from module to carrier board. Issued by module chipset and may result from a low RSTBTN# input, a low VIN_PWR_OK input, a VCC power input that falls below the minimum specification, a watchdog timeout, or may be initiated by the module software. PLTRST# should remain asserted (low) while the RSTBTN# is low.	O 3.3 VSB	PD 10 KΩ	
VIN_PWROK	C06	Power OK from main power supply. A high value indicates that the power is good.	I 3.3 VSB		
SUS_S3#	B08	Indicates system is in Suspend to RAM state. Active low output. An inverted copy of SUS_S3# on the carrier board should be used to enable the non-standby power on a typical ATX supply. Even in single input supply system implementations (AT mode, no standby input), the SUS_S3# module output should be used to disable any carrier voltage regulators when SUS_S3# is low, to prevent bleed leakage from carrier circuits into the module.	O 3.3 VSB	PD 1 KΩ	Suspend to RAM is not supported. Signals can be used for Sx state indicator.
SUS_S4_S5#	C08	Active low output signal that indicates the system is in Suspend to Disk (S4) or Soft Off (S5) state.	O 3.3 VSB	PD 1 KΩ	Suspend to RAM is not supported. Signals can be used for Sx state indicator.

SUS_CLK	A87	32.768 kHz +/- 100 ppm clock used by carrier peripherals such as M.2 cards in their low power modes.	O 3.3 VSB		
WAKE0#	D10	PCI Express wake up signal.	I/O 3.3 VSB	PU 10 K Ω 3.3 VSB	
WAKE1#	D11	General purpose wake up signal. May be used to implement wake-up on PS2 keyboard or mouse activity.	I 3.3 VSB	PU 10 K Ω 3.3 VSB	
BATLOW#	A11	Indicates that external battery is low. This port provides a battery-low signal to the module for orderly transitioning to power saving or power cut-off ACPI modes.	I 3.3 VSB	PU 10 K Ω 3.3 VSB	
TAMPER#	B06	Tamper or Intrusion detection line on VCC_RTC power well. Carrier hardware pulls this low on a tamper event.	I 3.3 VSB	PU 1 M Ω 3.3 VSB	
RSMRST_OUT#	B86	This is a buffered copy of the internal module RSMRST# (resume reset, active low) signal. The internal module RSMRST# signal is an input to the chipset or SOC and when it transitions from low to high it indicates that the suspend well power rails are stable. USB devices on the carrier that are to be active in S5 / S3 / S0 should not have their 5 V supply applied before RSMRST_OUT# goes high. RSMRST_OUT# shall be a 3.3 V CMOS module output, active in all power states.	O 3.3 V	PD 100 K Ω	

Table 34 Rapid Shutdown Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
RAPID_SHUTDOWN	E1	Trigger for Rapid Shutdown. Must be driven to 5V though a ≤ 50 ohm source impedance for ≥ 20 μ s. Pull-down / disable on module if RAPID_SHUTDOWN pin is not asserted.	I 5 V	PD 10 K Ω	Not supported

Table 35 Thermal Protection Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
CARRIER_HOT#	C04	Input from off-module temp sensor indicating an over-temp situation.	I 3.3 V	PU 10 K Ω 3.3 V	
THERMTRIP#	B04	Active low output indicating that the CPU has entered thermal shutdown.	O 3.3 V	PU 10 K Ω 3.3 V	

Table 36 SMBus Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
SMB_CLK	C86	System Management Bus bidirectional clock line.	I/O OD 3.3 VSB	PU 100 K Ω 3.3 VSB	
SMB_DAT	C87	System Management Bus bidirectional data line.	I/O OD 3.3 VSB	PU 100 K Ω 3.3 VSB	
SMB_ALERT#	C88	System Management Bus Alert – active low input can be used to generate an SMI# (System Management Interrupt) or to wake the system.	I 3.3V	PU 100 K Ω 3.3 VSB	

Table 37 General Purpose Input Output Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
GPIO_00	A88	General purpose input / output pins. Upon a hardware reset, these pins should be configured as inputs. As inputs, these pins should be able to generate an interrupt to the module host.	I/O 3.3 VSB	PU 100 KΩ 3.3 VSB

Signal	Pin #	Description	I/O	PU/PD	Comment
WD_OUT	B11	Output indicating that a watchdog time-out event has occurred	O 3.3 V	PD 100 K Ω	
WD_STROBE#	B10	Strobe input to watchdog timer. Periodic strobing prevents the watchdog, if enabled, from timing out.	I 3.3 V		
FAN_PWMOUT	C11	Fan speed control. Uses the Pulse Width Modulation (PWM) technique to control the fan's RPM.	O OD 3.3 V		
FAN_TACHIN	C12	Fan tachometer input for a fan with a two pulse output.	I OD 3.3 V	PU 47 K Ω 3.3 V	
TEST#	B85	Module input to allow vendor specific module test mode(s). Carrier designers should leave this pin open on the carrier. Designers involved in the design of specialty carriers for module test may pull this line to GND or possibly to a module specific analog voltage between GND and 3.3 V to select a test mode.	I OD 3.3 V		
RSVD	A32-A33 B19-B23 B45-B46 E3-E4 E6-E7 E9-E10 E12-E13 E15-E16 E18-E19 F15- F18 G13 G15-G19 H1-H18	Reserved pins. These may be assigned functions in future versions of this specification. Reserved pins shall not be connected to anything, and shall not be connected to each other.			

Table 40 Functional Safety (FuSa) Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
FUSA_SPI_MOSI	G8	Serial data from the carrier FuSa SPI master to the COM-HPC module SPI slave ("Master Out Slave In")	I 3.3V	PU 10 K Ω 3.3 V	Not supported
FUSA_SPI_MISO	G7	Serial data from the COM-HPC module SPI slave to the carrier FuSa SPI master ("Master In Slave Out")	O 3.3V		Not connected
FUSA_SPI_CS#	G5	Active low chip select from the carrier FuSa Safety controller SPI master to the COM-HPC module	I 3.3V	PU 10 K Ω 3.3 V	Not supported
FUSA_SPI_CLK	G6	Clock from the carrier FuSa Safety controller SPI master to the COM-HPC module	I 3.3V	PU 10 K Ω 3.3 V	
FUSA_SPI_ALERT	G9	Active high alert output from the COM-HPC module to alert the carrier FuSa Safety controller that module FuSa SPI data is available for transfer	O 3.3V		Not connected
THERMTRIP#	B04	Active low output indicating that the CPU has entered thermal shutdown	O 3.3V	PU 10 K Ω 3.3 V	

PROCHOT#	G11	Active low output indicating a temperature excursion event on the COM-HPC module	O 3.3V	PU 10 K Ω 3.3 V	
CATERR#	G12	Active low output indicating a catastrophic error on the COM-HPC CPU or SOC	O 3.3V	PU 10 K Ω 3.3 V	
FUSA_STATUS[1:0]	G3 G2	Two bit FuSa status / error indication outputs to carrier based Safety Controller hardware (bit 1 = NOK; bit 0 = OK) 00 - power off 01 - no error (OK state) 10 - error state (NOK state) 11 - reset state	O 3.3V		Not connected
FUSA_ALERT#	G4	Active low output from the COM-HPC module that signals the occurrence of a correctable error on the COM-HPC module; the carrier FuSa Safety Controller should query the status via the FuSa SPI interface	O 3.3V		
FUSA_VOLTAGE_ERR#	G10	Active low output indicating an over- or under voltage or over-current condition of the monitored voltage rails of the FuSa relevant module power supply	O 3.3V		

Table 41 External Power Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
VCC	A01-A09, B01, B03, B05, B07, B09 C01, C03, C05, C07, C09 D01-D09	Primary power input: <ul style="list-style-type: none"> fixed +12V on the Client Type 0; wide range +8V to +20V on the Client Type 1; fixed +12V on the Server. Refer to section 2.4.1 "Electrical Characteristics" for further details. All available VCC pins on the connector shall be used.			
VCC_5V_SBY	B24	Standby power input: +5.0V nominal. Refer to section 2.4.1 "Electrical Characteristics" for further details. Only used for standby and suspend functions. May be left unconnected if these functions are not used in the system design.			
VCC_RTC	A86	Real-time clock circuit-power input. Nominally +3.0V. section 2.4.1 "Electrical Characteristics" for details.			

GND	A10, A13, A16, A19, A22, A25, A28, A31, A34, A37, A40, A43, A46, A49, A55, A58, A61, A64, A67, A70, A73, A76, A79, A82, A85 B12, B15, B18, B42, B57, B60, B63, B66, B69, B72, B75, B78, B81, B84 C10, C13, C16, C19, C22, C25, C28, C31, C34, C37, C40, C43, C46, C49, C55, C58, C61, C64, C67, C70, C73, C76, C79, C82, C85 D12, D15, D18, D21, D24, D27, D30, D33, D36, D39, D42, D45, D48, D51, D54, D57, D60, D63, D66, D69, D72, D75, D78, D81, D84, D87, D90, D93, D96 E2, E5, E8, E11, E14, E17, E20, E23, E26, E29, E32, E35, E38, E41, E44, E47, E50, E53, E56, E59, E62, E65, E68, E71, E74, E77, E80, E83, E86, E89, E92, E95 F19, F22, F25, F28, F31, F34, F37, F40, F43, F46, F49, F52, F55, F58, F61, F64, F67, F70, F73, F76, F79, F82, F85, F88, F91, F94 G14, G20, G23, G26, G29, G32, G35, G38, G41, G44, G47, G50, G53, G56, G59, G62, G65, G68, G71, G74, G77, G80, G83, G86, G89, G92, G95 H19, H22, H25, H28, H31, H34, H37, H40, H43, H46, H49, H52, H55, H58, H61, H64, H67, H70, H73, H76, H79, H82, H85, H88, H91, H94, H97	Ground - DC power and signal and AC signal return path. All available GND connector pins shall be used and tied to carrier board GND plane(s).			
-----	--	--	--	--	--

8.2 Boot Strap Signals

Table 42 Boot Strap Signal Descriptions

Signal	Pin #	Description of Boot Strap Signal	I/O	PU/PD	Comment
ETH0_SDP	F98	Software-Definable Pins. Can also be used for IEEE1588 support such as a PPS signal.	I/O 3.3 VSB	PU 10 K Ω 3.3 VSB	
ETH1_SDP	F99				
ETH2_SDP	F1				
ETH3_SDP	F2				
ETH0-3_MDIO_DAT	H99	Management Data I/O interface mode data signal for serial data transfers between the MAC and an external PHY for ETHx ports 0 to 3	I/O 3.3 VSB	PU 1 K Ω 3.3 VSB	
ETH0-3_MDIO_CLK	H98	Clock signal for Management Data I/O interface mode data signal for serial data transfers between the MAC and an external PHY for ETHx ports 0 to 3	O 3.3 VSB	PU 1 K Ω 3.3 VSB	

Note

The signals listed in the table above are used as chipset configuration straps during system reset. In this condition (during reset), the COM-HPC® or chipset internally implemented resistors pull these signals to the correct state.

Caution

No external DC loads or external pull-up or pull-down resistors should change the configuration of the signals listed in the above table. External circuitry may override the internal strap states and cause the COM-HPC® module to malfunction or cause irreparable damage to the module.

9 System Resources

9.1 I/O Address Assignment

The I/O address assignment of the conga-HPC/sILL module is functionally identical with a standard PC/AT. The BIOS assigns PCI and PCI Express I/O resources from FFF0h downwards.

Non PnP/PCI/PCI Express compliant devices must not consume I/O resources in that area.

9.2 PCI Configuration Space Map

Table 1 PCI Configuration Space Map

Bus Number (Hex)	Device Number (Hex)	Function Number (Hex)	Description and Device ID

 **Note**

1. *In the standard configuration, the Memory Map / Intel VT-d controller has 3 policy groups on Bus 0, Bus 14h, and Bus F3h.*
2. *The PCI Express Ports are visible only if a device is attached to the PCI Express Slot on the carrier board.*
3. *In the standard configuration, the Intel Management Engine (ME) related devices are partly present or not present at all.*
4. *The table represents a case when a single function PCI/PCIe device is connected to all possible slots on the carrier board. The given bus numbers will change based on actual hardware configuration.*

10 BIOS Setup Description

The BIOS setup description of the conga-HPC/sILL can be viewed without having access to the module. However, access to the restricted area of the congatec website is required in order to download the necessary tool (CgMlfViewer) and Menu Layout File (MLF).

The MLF contains the BIOS setup description of a particular BIOS revision. The MLF can be viewed with the CgMlfViewer tool. This tool offers a search function to quickly check for supported BIOS features. It also shows where each feature can be found in the BIOS setup menu.

For more information, read the application note "AN42 - BIOS Setup Description" available at www.congatec.com.

If you do not have access to the restricted area of the congatec website, contact your local congatec sales representative.

10.1 Navigating the BIOS Setup Menu

The BIOS setup menu shows the features and options supported in the congatec BIOS. To access and navigate the BIOS setup menu, press the or <F2> key during POST. The right frame displays the key legend.

Above the key legend is an area reserved for text messages. These text messages explain the options and the possible impacts when changing the selected option in the left frame.

10.2 BIOS Versions

The BIOS displays the BIOS project name and the revision code during POST, and on the main setup screen. The initial production BIOS for conga-HPC/sILL is identified as HSILR1xx, where:

- R is the identifier for a BIOS binary file,
- 1 is the so called feature number and
- xx is the major and minor revision number.

The conga-HPC/sILL BIOS binary size is 64 MB.

10.3 Updating the BIOS

BIOS updates are recommended to correct platform issues or enhance the feature set of the module. The conga-HPC/sILL features a congatec/AMI AptioEFI firmware on an onboard flash ROM chip. You can update the firmware with the congatec System Utility. The utility has five versions—UEFI shell, DOS based command line¹, Win32 command line, Win32 GUI, and Linux version.

For more information about “Updating the BIOS” refer to the user’s guide for the congatec System Utility “CGUTLm1x.pdf” on the congatec website at www.congatec.com.

Note

¹. *Deprecated.*

Caution

Use only the UEFI shell for critical updates. The DOS command line tool is not officially supported by congatec and therefore not recommended for critical tasks such as firmware updates.

10.3.1 Updating from External Flash

For instructions on how to update the BIOS from external flash, refer to the AN7_External_BIOS_Update.pdf application note on the congatec website at <http://www.congatec.com>.

10.4 Supported Flash Devices

The conga-HPC/sILL supports the following flash devices:

- Winbond W25Q512JVEIQ (DFN8x6 package) 64 MB
- Micron MT25QL512ABB1EW9-0SIT (DFN8x6 package) 64 MB
- Macronix MX25L51245GMI-08G (SOIC16 package) 64 MB

The flash devices listed above can be used on the carrier board to support external BIOS. For more information about external BIOS support, refer to the Application Note AN7_External_BIOS_Update.pdf on the congatec website at <http://www.congatec.com>.
